Selina Class 8 ICSE Solutions Chemistry :

Chapter 9- Carbon and Its Compounds

Class 8: Chemistry Chapter 9 solutions. Complete Class 8 Chemistry Chapter 9 Notes.

Selina Class 8 ICSE Solutions Chemistry : Chapter 9- Carbon and Its Compounds

Selina 8th Chemistry Chapter 9, Class 8 Chemistry Chapter 9 solutions

Question 1.

Fill in the blanks.

- (a) **Carbon** is present in both living and non-living things.
- (b) The tendency of an element to exist in two or more forms but in the same physical state is called **Allotropy**.
- (c) **Crystalline** and **non-crystalline** are the two major crystalline allotropes of carbon.
- (d) **Diamond** is the hardest substance that occurs naturally.
- (e) The name 'carbon' is derived from the Latin word **carbo**.

Question 2.

Choose the correct alternative.

- (a) In the combined state, carbon occurs as
 - (i) coal
 - (ii) diamond
 - (iii) graphite

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

(iv) petroleum

Answer: (iv) petroleum

(b) A crystalline form of carbon is

(i) lamp black

(ii) gas carbon

(iii) sugar

(iv) fullerene

Answer: (iii) sugar

(c) Graphite is not found in

(i) Bihar

(ii) Maharashtra

(iii) Orissa

(iv) Rajasthan

Answer: (ii) Maharashtra

(d) Diamond is used for

(i) making the electrodes of electric furnaces.

(ii) making crucible for melting metals.

(iii) cutting and drilling rocks and glass.

(iv) making carbon brushes for electric motors.

Answer: (iii) cutting and drilling rocks and glass.

(e) Carbon forms innumerable compounds because

(i) it has four electrons in its outermost shell.

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

- (ii) it behaves as metal as well as a non-metal.
- (iii) carbon atoms can form long chains.
- (iv) it combines with other elements to form covalent compounds.

Answer: (iii) carbon atoms can form long chains.

Question 3.

Write 'true' or 'false' against the following statements.

- (a) Carbon constitutes 0.03% of the earth's crust.

Solution: True

- (b) Graphite is the purest form of carbon.

Solution: False

- (c) Coloured diamonds are costlier than colourless and transparent diamonds.

Solution: False

- (d) Graphite has layers of hexagonal carbon bondings.

Solution: True

- (e) Diamond is insoluble in all solvents.

Solution: True.

Question 4.

Define the following terms:

- (a) Allotropy
- (b) Carat
- (c) Crystal
- (d) Catenation

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

Solution:

(a) Allotropy: The phenomenon due to which an element exists in two or more forms in the same physical state with identical properties but with different physical properties is known as allotropy.

(b) Carat: The weight of a diamond is expressed in carats [1 carat = 0.2 g]

(c) Crystal: A homogeneous solid in which particles such as atoms, molecules or ions are arranged in the definite pattern due to which they have a definite geometrical shape with plane surfaces is called a crystal. eg. sugar and sodium chloride.

(d) Catenation: There is a unique property of carbon called catenation through which a large number of organic compounds is due to the ability of carbon atom to form long chains with other carbon atoms through the sharing of electrons.

Question 5.**State the terms:**

(a) Substances whose atoms or molecules are arranged in a definite pattern.

Solution: Crystals.

(b) Different forms of an element found in the same physical state.

Solution: Allotropy.

(c) The property by which atoms of an element link together to form a long chain or ring compounds.

Solution: Catenation

Question 6.**Name the following:**

(a) The hardest naturally occurring substance.

Solution: Diamond.

(b) A greyish-black non-metal that is a good conductor of electricity.

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

Solution: Graphite.

(c) The third crystalline form of carbon.

Solution: Fullerenes.

Question 7.

Answer the following questions:

(a) Why is graphite a good conductor of electricity but not a diamond?

Solution:

One valence electron of each carbon atom remains free in a graphite molecule, thus making graphite a good conductor of electricity. Whereas in diamond, they have no free mobile electron. That is why a diamond is a bad conductor of electricity.

(b) Why is diamond very hard?

Solution:

A diamond is a giant molecule. There are 4 valence electrons in carbon atom where each carbon atom is linked with four neighbouring carbon atoms. Thus forming a rigid tetrahedral structure. It is the strong bonding that makes diamond the hardest substance.

(c) What are fullerenes? Name the most common fullerenes.

Solution:

Fullerenes: Fullerenes are the third crystalline form of carbon. They have been found to exist in interstellar dust as well though they were discovered only recently as in the geological formations of the earth. Common fullerenes are C-32, C-50, C-70 and C-76

(d) What impurity is present in a black diamond?

Solution:

Copper oxide present in black diamond is impurity.

(e) Explain the softness of graphite with reference to its structure.

Solution:

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

Each carbon atom is linked with three neighbouring carbon atoms in a graphite molecule. Thus forming a hexagonal arrangement of atoms. These hexagonal groupings of carbon atoms are arranged as layers or sheets piled on the top of others. The layers are held together by weak forces such that they can slide over one another. That is why graphite is soft.

Question 8.

Give two uses of

(a) graphite

(b) diamond.

Solution:

(a) Two uses of graphite:

1. For making the electrodes of electric furnaces.
2. For making crucibles for melting metals due to its high melting points.

(b) Two uses of a diamond:

1. Diamond is used in jewellery as a gem
2. It is used for cutting and drilling rocks, glass,

Question 9.

Write three differences between graphite and diamond.

Solution:

Differences between diamond and graphite.

Diamond	Graphite
1. Pure diamond is colourless and transparent.	1. Graphite is greyish black opaque and shiny.

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

- | | |
|---|---|
| 2. It is the hardest naturally occurring substance. | 2. It is soft and greasy to touch. |
| 3. It has high density i.e. 3.5 g/cm^3 | 3. It has low density i.e. 2.39 g/cm^3 . |
| 4. It is a bad conductor of electricity. | 4. It is a good conductor of electricity. |
| 5. It burns in air at 900°C to form carbon dioxide. | 5. It burns in air at 700°C to form carbon dioxide. |

Exercise – II

Question 1.

Fill in the blanks:

- (a) **Charcoal** is formed when charcoal is burnt in a limited supply of air.
- (b) Coal is an **amorphous** form of carbon.
- (c) **Peat** is the most inferior form of coal.
- (d) Wood charcoal is a **bad** conductor of heat and electricity.
- (e) **Lampblack** is used in making black shoe polish.

Selina Publishers ICSE Solutions

Class 8 Chemistry

- Chapter 1- Matter
- Chapter 2- Physical and Chemical Changes
- Chapter 3- Elements, Compounds and Mixtures
- Chapter 4- Atomic Structure
- Chapter 5- Language of Chemistry Solutions
- Chapter 6- Chemical Reactions Solutions
- Chapter 7- Hydrogen Solutions
- Chapter 8- Water Solutions
- Chapter 9- Carbon and Its Compounds

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-9-carbon-and-its-compounds/>

About About Selina Publishers ICSE

Selina Publishers has been serving the students since 1976 and is one of the quality ICSE school textbooks publication houses. Mathematics and Science books for classes 6-10 form the core of our business, apart from certain English and Hindi literature as well as a few primary books. All these books are based upon the syllabus published by the Council for the I.C.S.E. Examinations, New Delhi. The textbooks are composed by a panel of subject experts and vetted by teachers practising in ICSE schools all over the country. Continuous efforts are made in complying with the standards and ensuring lucidity and clarity in content, which makes them stand tall in the industry.

About IndCareer

IndCareer.com is a leading developer of online career guidance resources for the Indian marketplace. Established in 2007, IndCareer.com is currently used by over thousands of institutions across India, including schools, employment agencies, libraries, colleges and universities.

IndCareer.com is designed to assist you in making the right career decision - a decision that meets your unique interests and personality.
