## Chapter 3- Elements, Compounds and Mixtures

Class 8: Chemistry Chapter 3 solutions. Complete Class 8 Chemistry Chapter 3 Notes.

### Selina Class 8 ICSE Solutions Chemistry : Chapter 3- Elements, Compounds and Mixtures

Selina 8th Chemistry Chapter 3, Class 8 Chemistry Chapter 3 solutions

#### Question 1.

**Define:**

- (a) Elements
- (b) Compounds

**Solution:**

- (a) The element is a substance, and it cannot be split further into simpler substances and has a definite set of properties. Elements are made up of only one kind of atoms.
- (b) Compounds are pure substances comprising two or more elements with the same mass and same properties, completely different from those of its constituents elements. They are made up of different types of atoms combined chemically.

#### Question 2.

Give two examples for each of the following.

- (a) Metals

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

**Solution:** Iron, silver.

(b) Non-metals

**Solution:** Carbon, oxygen

(c) Metalloids

**Solution:** Antimony, silicon.

(d) Inert gases

**Solution:** Helium, argon.

### Question 3.

Differentiate between:

(a) Pure and impure substances

(b) Homogenous and heterogenous substances

**Solution:**

(a) Pure and impure substances

#### Pure substances

1. Pure substances have a definite composition and definite physical and chemical properties.
2. They are all homogeneous, i.e. their composition is uniform throughout the bulk.
3. Examples: Elements and compounds

#### Impure substances

1. Impure substances are made up of two or more pure substances mixed in any proportion.
2. They might be homogeneous or heterogeneous, i.e. their composition is not uniform throughout the bulk.
3. They are all mixtures. Examples: air, sea water, petroleum, a solution of sugar in water are all impure substances.

(b) Homogenous and heterogenous substances

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

**Solution:**

**Homogeneous mixture**

1. The homogeneous mixture is a mixture with components that make up the mixture uniformly distributed throughout the mixture

2. Example – air, sugar water, rainwater

**Heterogeneous mixture**

1. A heterogeneous mixture is a mixture, where the components of the mixture are not uniform or have localised regions with different properties.

2. Example – Cereal in milk, vegetable soup

**Question 4.**

Write the chemical name of the following and also give their molecular formulae:

(a) Baking soda

**Solution:** Sodium bicarbonate (Baking soda) -  $\text{NaHCO}_3$

(b) Vinegar

**Solution:** Acetic acid (Vinegar) –  $\text{CH}_3\text{COOH}$

(c) Marble

**Solution:** Calcium carbonate (Marble) –  $\text{CaCO}_3$

(d) Sand

**Solution:** Silicon dioxide (Sand) –  $\text{SiO}_2$

**Question 5.**

**Name:**

(a) a soft metal

**Solution:** Gold

(b) a metal which is brittle

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

**Solution:** Zinc

(c) a non-metal which is lustrous

**Solution:** Iodine

(d) a liquid metal

**Solution:** Mercury

(e) a metal which is a poor conductor of electricity.

**Solution:** Tungsten

(f) a non-metal which is a good conductor of electricity.

**Solution:** Graphite

(g) a liquid non-metal

**Solution:** Bromine

(h) the hardest naturally occurring substance

**Solution:** Diamond

(i) an inert gas

**Solution:** Neon, helium

**Question 6.**

How is sodium chloride different from its constituent elements?

**Solution:**

The properties of sodium and chlorine are completely different from those of sodium chloride. Sodium is a soft, highly reactive metal. Chlorine is a poisonous non-metallic gas while sodium chloride is a very useful non-poisonous compound which is added to our food to get minerals and also to add taste to it.

**Question 7.**

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

Why is iron sulphide a compound?

**Solution:**

Iron sulphide is a compound which can be broken into the elements iron and sulphur, they both have different properties. The properties of the compound are entirely different from that of its constituent elements.

Exercise 3B

**Question 1.**

Classify the following substances into compounds and mixtures:

Carbon dioxide, air, water, milk, common, salt, blood, fruit juice, iron sulphide.

**Solution:**

Carbon dioxide – Compound

Air – Mixture

Water – Compound

Milk – Mixture

Common salt – Compound

Blood – Mixture

Fruit juice – Mixture

Iron sulphide – Compound

**Question 2.**

Give one example for each of the following types of mixtures

(a) Solid-solid homogenous mixture

(b) Solid-liquid heterogeneous mixture

(c) Miscible liquids

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

(d) liquid-gas homogenous mixture

**Solution:**

(a) Solid-solid homogenous mixture – Alloys of metals, e.g. brass, bronze stainless steel etc.

(b) Solid-liquid heterogenous mixture – Sand and water, mud and water, sugar and oil.

(c) Miscible liquids – water and ethanol.

(d) Liquid-gas homogenous mixture – Air

**Question 3.**

Suggest a suitable technique to separate the constituents of the following mixtures. Also, give the reason for selecting the particular method.

(a) Salt from seawater

(b) Ammonium chloride from sand

(c) Chalk powder from water

(d) Iron from sulphur

(e) Water and alcohol

(f) Sodium chloride and potassium nitrate

(g) Calcium carbonate and sodium chloride

**Solution:**

(a) Evaporation is the technique used to separate the salt from seawater. The method of evaporation is used to separate the components of the homogeneous solid-liquid mixture. In this method, seawater is collected in a shallow bed and allowed to evaporate in the sun. When all the water is evaporated, salt is left behind. By this method, we only get solid, and liquid is evaporated in its vapour form.

(b) Sublimation is the technique used to separate Ammonium chloride from the sand. The method of sublimation is used for solid mixtures in which one of the components can sublime on heating. In this method, Ammonium chloride changes into vapours on heating and salt is left behind.

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

(c) Filtration is the technique used to separate chalk powder from the water. The method of filtration is used to separate the components of a heterogeneous solid-liquid mixture in which solids are light and insoluble in liquids. Substances used are sand filter paper at C. These filters allow the liquid to pass through them, but not solids.

(d) Magnetic separation is the technique to separate iron from sulphur. The method of Magnetic separation is used when one of the components of the mixture is iron, iron gets attracted towards the magnet and hence get separated.

(e) Fractional Distillation is the technique used to separate water and Alcohol. In this method, the vapours of water are left behind in the original vessel as the alcohol boils at a lower temperature than water. Thus these two liquids can be separated.

(f) Fractional crystallization technique is used here. Because when the solubility of solid components of mixture and different in the same solvent, this method is used. Here, sodium chloride and potassium nitrate. Both are soluble in water, but the solubility of potassium nitrate is more.

(g) The solvent Extraction technique is used here. Because salts get dissolve in water while calcium carbonate being insoluble in the water settles down in the container by this method. Hence get separated about.

# Selina Publishers ICSE Solutions

## Class 8 Chemistry

- Chapter 1- Matter
- Chapter 2- Physical and Chemical Changes
- Chapter 3- Elements, Compounds and Mixtures
- Chapter 4- Atomic Structure
- Chapter 5- Language of Chemistry Solutions
- Chapter 6- Chemical Reactions Solutions
- Chapter 7- Hydrogen Solutions
- Chapter 8- Water Solutions
- Chapter 9- Carbon and Its Compounds

<https://www.indcareer.com/schools/selina-class-8-icse-solutions-chemistry-chapter-3-elements-compounds-and-mixtures/>

## About About Selina Publishers ICSE

Selina Publishers has been serving the students since 1976 and is one of the quality ICSE school textbooks publication houses. Mathematics and Science books for classes 6-10 form the core of our business, apart from certain English and Hindi literature as well as a few primary books. All these books are based upon the syllabus published by the Council for the I.C.S.E. Examinations, New Delhi. The textbooks are composed by a panel of subject experts and vetted by teachers practising in ICSE schools all over the country. Continuous efforts are made in complying with the standards and ensuring lucidity and clarity in content, which makes them stand tall in the industry.

## About IndCareer

IndCareer.com is a leading developer of online career guidance resources for the Indian marketplace. Established in 2007, IndCareer.com is currently used by over thousands of institutions across India, including schools, employment agencies, libraries, colleges and universities.

IndCareer.com is designed to assist you in making the right career decision - a decision that meets your unique interests and personality.
