Correct : 1 Wrong : 0

Please read the text given below and answer the questions that follow.

The recent passing of Stephen Hawking has been met with expressions of grief as creative as the man himself. Unfortunately, ableism has abounded in this collective celebration of the life of arguably the most famous person with disability in the world. And disability rights activists have been calling it out.

The disability rights movement is a relatively young human rights movement, and isn't always met with the empathy it demands. The idea that disability is suffering and pain is well entrenched in the public psyche. In fact, the movement now chiefly subscribes to the 'social' model, which is to say that people who may have impairments are disabled by lack of access to infrastructure and communication and by attitudes around them that create barriers. That it is these barriers to participation that should be addressed by the sector by enacting rights-based legislations prohibiting discrimination, and promoting new technology and services to support people's efforts to communicate, move and make decisions. This is in contrast to the 'medical model', which locates disability in the body of the person, and looks at it as something to be cured, treated, or managed.

Hawking was 21 years old when he was diagnosed with amyotrophic lateral sclerosis (ALS), a condition that affects the nerve cells that control voluntary muscle movement, including speech, chewing, and walking. His prognosis was poor, and his condition deteriorated even as he was finishing up his education and beginning his academic career. Within a decade, only his close family and friends could understand him. He began to use a wheelchair reluctantly.

Along with his pioneering work in cosmology, he became a popular cultural icon. For the disability sector, he stood for a person with disability thriving after barriers to his participation were removed, but also set the bar very high for the 'productivity' of persons with disabilities.

People have been hoping that that policymakers derive inspiration not from Hawking himself but from the outcomes of support provided to the disabled. There is a considerable cost to excluding persons with disabilities from society; given that the majority of them in the world are still restrained by barriers to participation, any estimate would come up short. Existing resources being diverted to services that perpetuate segregation, infantilisation and dependence need to be repurposed towards giving the disabled the supports they need to realise their own potential, and – in a tribute to Hawking – “to look up at the stars” and not at their impairments. (Adapted from: “Celebrating Stephen Hawking and also celebrating disability” in thewire.in)

The writer is somewhat critical of the various outpourings of grief that followed Hawking's death, many of which focused on

Options :

1. ❌ His scientific achievements
2. ✅ His achievements as a person with disability
3. ❌ His numerous awards

4. ✖ His life as a science popularizer

Question Number : 2 Question Id : 35918115893 Question Type : MCQ Option Shuffling : Yes Display Question Number : Yes
