

NCERT Solutions for Class 10th Science: Chapter 2 Acids Bases and Salts

Class 10: Science Chapter 2 solutions. Complete Class 10 Science Chapter 2 Notes.

NCERT Solutions for Class 10th Science: Chapter 2 Acids Bases and Salts

NCERT 10th Science Chapter 2, class 10 Science Chapter 2 solutions

Page No: 18

1. You have been provided with three test tubes. One of them contains distilled water and the other two contain an acidic solution and a basic solution, respectively. If you are given only red litmus paper, how will you identify the contents of each test tube?

Answer

If the colour of red litmus does not change then it is acid. If the colour of red litmus changes to blue then it is base. If there is slight change in the colour of red litmus (such as purple) then it is distilled water.

Page No: 22

1. Why should curd and sour substances not be kept in brass and copper vessels?

Answer

Curd and other sour substances contain acids. Therefore, when they are kept in brass and copper vessels, the metal reacts with the acid to liberate hydrogen gas and harmful products, thereby spoiling the food.

2. Which gas is usually liberated when an acid reacts with a metal? Illustrate with an example. How will you test for the presence of this gas?

Answer

Hydrogen gas is usually liberated when an acid reacts with metal.

Take few pieces of zinc granules and add 5 ml of dilute H2SO4. Shake it and pass the gas produced into a soap solution. The bubbles of the soap solution are formed. These soap bubbles contain hydrogen gas.

 $H_2SO_4 + Zn \rightarrow ZnSO_4 + H_2 \uparrow$

We can test the evolved hydrogen gas by its burning with a pop sound when a candle is brought near the soap bubbles.

3. Metal compound A reacts with dilute hydrochloric acid to produce effervescence. The gas evolved extinguishes a burning candle. Write a balanced chemical equation for the reaction if one of the compounds formed is calcium chloride.

Answer

 $CaCO_3 (s) + 2HCI (aq) \rightarrow CaCI_2 (aq) + CO_2 (g) + H_2O (I)$

Calcium Carbonate + Hydrochloric acid \rightarrow Calcium Chloride + Carbon dioxide + Water

NCERT 10th Science Chapter 2, class 10 Science Chapter 2 solutions

Page No: 25

1. Why do HCI, HNO₃, etc., show acidic characters in aqueous solutions while solutions of compounds like alcohol and glucose do not show acidic character?

Answer

When HCl or HNO_3 are mixed with water then they dissolve in water to form H⁺ or H₃O⁺ ions which shows their acidic character. For example just see the following reactions

HCl (aq) \rightarrow H⁺ + Cl⁻

 $\mathrm{H^{+}} + \mathrm{H_{2}O} \rightarrow \mathrm{H_{3}O^{+}}$

When alcohols and glucose are mixed with water then they do not dissolve to form ions. Hence they do not show acidic character.

2. Why does an aqueous solution of an acid conduct electricity?

Answer

The presence of hydrogen (H^+) or hydronium (H_3O^+) ions in the aqueous solution of an acid are responsible for conducting electricity.

3. Why does dry HCI gas not change the colour of the dry litmus paper?

Answer

Dry HCl gas not change the colour of the dry litmus paper because it has no Hydrogen ions (H^+) in it.

4. While diluting an acid, why is it recommended that the acid should be added to water and not water to the acid?

Answer

Since the process of dissolving an acid in water is exothermic, it is always recommended that acid should be added to water. If it is done the other way, then it is possible that because of the large amount of heat generated, the mixture splashes out and causes burns.

5. How is the concentration of hydronium ions (H_3O^+) affected when a solution of an acid is diluted?

Answer

When an acid is diluted, the concentration of hydronium ions (H_3O^+) per unit volume decreases. This means that the strength of the acid decreases.

6. How is the concentration of hydroxide ions (OH⁻) affected when excess base is dissolved in a solution of sodium hydroxide?

Answer

The concentration of hydroxide ions (OH⁻) would increase when excess base is dissolved in a solution of sodium hydroxide.

NCERT 10th Science Chapter 2, class 10 Science Chapter 2 solutions

Page No: 28

1. You have two solutions, A and B. The pH of solution A is 6 and pH of solution B is 8. Which solution has more hydrogen ion concentration? Which of this is acidic and which one is basic?

Answer

A pH value of less than 7 indicates an acidic solution, while greater than 7 indicates a basic solution. Therefore, the solution with pH = 6 is acidic and has more hydrogen ion concentration than the solution of pH = 8 which is basic.

2. What effect does the concentration of H⁺ (aq) ions have on the nature of the solution?

Answer

If the concentration of H^+ (aq) ions is increased (>10-7) then the solution become acidic and if the concentration of H^+ (aq) ions is decreased (<10-7) then the solution become basic in nature.

3. Do basic solutions also have H^+ (aq) ions? If yes, then why are these basic?

Answer

Yes, basic solution also has H^+ ions. However, their concentration is less as compared to the concentration of OH^- ions that makes the solution basic.

4. Under what soil condition do you think a farmer would treat the soil of his fields with quick lime (calcium oxide) or slaked lime (calcium hydroxide) or chalk (calcium carbonate)?

Answer

If the soil is acidic and improper for cultivation, then to increase the basicity of soil, the farmer would treat the soil with quick lime or slaked lime or chalk.

NCERT 10th Science Chapter 2, class 10 Science Chapter 2 solutions

Page No: 33

1. What is the common name of the compound CaOCI₂?

► Bleaching Powder.

2. Name the substance which on treatment with chlorine yields bleaching powder?

► Calcium hydroxide [Ca(OH)₂]

3. Name the sodium compound which is used for softening hard water.

• Washing soda ($Na_2CO_3.10H_2O$)

4. What will happen if a solution of sodium hydrocarbonate is heated? Give the equation of the reaction involved.

Answer

When sodium hydrogen carbonate is heated then sodium carbonate and water is formed along with the evolution of carbon dioxide gas.

2NaHCO₃ Heat Na₂CO₃ + H₂O +CO₂

5. Write an equation to show the reaction between Plaster of Paris and water.

Answer

CaSO₄. $\frac{1}{2}$ H₂O + $1\frac{1}{2}$ H₂O $\xrightarrow{\text{Heat}}$ CaSO₄.2H₂O (Plaster of Paris) (Water) (Gypsum)

Page No: 34

1. A solution turns red litmus blue, its pH is likely to be

(a) 1

(b) 4

(c) 5

(d) 10

► (d) 10

2. A solution reacts with crushed egg-shells to give a gas that turns lime-water milky. The solution contains

(a) NaCl

(b) HCI

(c) LiCl

(d) KCI

► (b) HCI

3. 10 mL of a solution of NaOH is found to be completely neutralised by 8 mL of a given solution of HCI. If we take 20 mL of the same solution of NaOH, the amount of HCI solution (the same solution as before) required to neutralise it will be

(a) 4 mL

(b) 8mL

(c) 12 mL

(d) 16 mL

► (d) 16 mL

4. Which one of the following types of medicines is used for treating indigestion?

(a) Antibiotic

- (b) Analgesic
- (c) Antacid
- (d) Antiseptic
- ► (c) Antacid

5, Write word equations and then balanced equations for the reaction taking place when –

- (a) dilute sulphuric acid reacts with zinc granules.
- (b) dilute hydrochloric acid reacts with magnesium ribbon.
- (c) dilute sulphuric acid reacts with aluminium powder.
- (d) dilute hydrochloric acid reacts with iron filings.

Answer

- (a) H_2SO_4 (aq) + Zn (s) \rightarrow ZnSO₄ (aq) + H_2 (g)
- (b) 2HCl (aq) + Mg (s) \rightarrow MgCl₂ (aq) + H₂ (g)
- (c) $3H_2SO_4$ (aq) + 2AI (s) $\rightarrow AI_2(SO_4)_3$ (aq) + $3H_2$ (g)
- (d) 6HCl (aq) + 2Fe (s) \rightarrow 2FeCl₃ (aq) + 3H₂ (g)

6. Compounds such as alcohols and glucose also contain hydrogen but are not categorized as acids. Describe an activity to prove it.

Answer

Two nails are fitted on a cork and are kept it in a 100 mL beaker. The nails are then connected to the two terminals of a 6-volt battery through a bulb and a switch. Some dilute HCl is poured in the beaker and the current is

switched on. The same experiment is then performed with glucose solution and alcohol solution. Observations:

It will be observed that the bulb glows in the HCI solution and does not glow in the glucose solution.

Result:

HCI dissociates into H⁺and Cl⁻ions. These ions conduct electricity in the solution resulting in the glowing of the bulb. On the other hand, the glucose solution does not dissociate into ions. Therefore, it does not conduct electricity.

Conclusion:

From this activity, it can be concluded that all acids contain hydrogen but not all compounds containing hydrogen are acids.

That is why, though alcohols and glucose contain hydrogen, they are not categorised as acids.

7. Why does distilled water not conduct electricity, whereas rain water does?

Answer

Distilled water cannot conduct electricity because it does not contain ions while rain water conducts electricity as it contains ions due presence of dissolved salts in it.

8. Why do acids not show acidic behaviour in the absence of water?

Answer

Acids do not show acidic behaviour in the absence of water because the dissociation of hydrogen ions from an acid occurs in the presence of water only.

NCERT 10th Science Chapter 2, class 10 Science Chapter 2 solutions

9. Five solutions A, B, C, D and E when tested with universal indicator showed pH as 4, 1, 11, 7 and 9, respectively. Which solution is

- (a) neutral?
- (b) strongly alkaline?
- (c) strongly acidic?
- (d) weakly acidic?
- (e) weakly alkaline?

Arrange the pH in increasing order of hydrogen-ion concentration.

Answer

- (a) Neutral \rightarrow Solution D with pH 7
- (b) Strongly alkaline \rightarrow Solution C with pH 11
- (c) Strongly acidic \rightarrow Solution B with pH 1
- (d) Weakly acidic \rightarrow Solution A with pH 4

(e) Weakly alkaline \rightarrow Solution E with pH 9

The pH can be arranged in the increasing order of the concentration of hydrogen ions as: 11 < 9 < 7 < 4 < 1.

10. Equal lengths of magnesium ribbons are taken in test tubes A and B. Hydrochloric acid (HCI) is added to test tube A, while acetic acid (CH₃COOH) is added to test tube B. In which test tube will the fizzing occur more vigorously and why?

Answer

The fizzing will occur strongly in test tube A, in which hydrochloric acid (HCI) is added. This is because HCI is a stronger acid than CH_3COOH and therefore produces hydrogen gas at a faster speed due to which fizzing occurs.

NCERT 10th Science Chapter 2, class 10 Science Chapter 2 solutions

11. Fresh milk has a pH of 6. How do you think the pH will change as it turns into curd? Explain your answer.

Answer

The pH of milk is 6. As it changes to curd, the pH will reduce because curd is acidic in nature. The acids present in it decrease the pH.

12.A milkman adds a very small amount of baking soda to fresh milk.

(a) Why does he shift the pH of the fresh milk from 6 to slightly alkaline?

(b) Why does this milk take a long time to set as curd?

Answer

(a) The milkman shifts the pH of the fresh milk from 6 to slightly alkaline because in alkaline condition, milk does not set as curd easily.

(b) Since this milk is slightly basic than usual milk, acids produced to set the curd are neutralized by the base. Therefore, it takes a longer time for the curd to set.

13. Plaster of Paris should be stored in a moisture-proof container. Explain why?

Answer

The Plaster of Paris should be stored in a moisture-proof container as it absorbs water from moisture and turn into hard substance (Gypsum) as shown in following chemical equation.

CaSO₄. $\frac{1}{2}$ H₂O + $1\frac{1}{2}$ H₂O $\xrightarrow{\text{Heat}}$ CaSO₄.2H₂O (Plaster of Paris) (Water) (Gypsum)

14. What is a neutralization reaction? Give two examples.

Answer

A reaction in which an acid and base react with each other to give a salt and water is termed as neutralization reaction.For Example:

(i) NaOH + HCl \rightarrow NaCl + H₂O

(ii) $HNO_3 + KOH \rightarrow KNO_3 + H_2O$

15. Give two important uses of washing soda and baking soda.

Answer

Two important uses of washing soda are:

 \rightarrow It is used in glass, soap, and paper industries.

 \rightarrow It is used to remove permanent hardness of water.

Two important uses of baking soda are:

 \rightarrow It is used as baking powder. Baking powder is a mixture of baking soda and a mild acid known as tartaric acid. When it is heated or mixed in water, it releases CO2 that makes bread or cake fluffy.

 \rightarrow It is used in soda-acid fire extinguishers.

IndCareer About NCERT

The National Council of Educational Research and Training is an autonomous organization of the Government of India which was established in 1961 as a literary, scientific, and charitable Society under the Societies Registration Act. The major objectives of NCERT and its constituent units are to: undertake, promote and coordinate research in areas related to school education; prepare and publish model textbooks, supplementary material, newsletters, journals and develop educational kits, multimedia digital materials, etc.Organise pre-service and in-service training of teachers; develop and disseminate innovative educational techniques and practices; collaborate and network with state educational departments, universities, NGOs and other educational institutions; act as a clearing house for ideas and information in matters related to school education; and act as a nodal agency for achieving the goals of Universalisation of Elementary Education. In addition to research, development, training, extension, publication and dissemination activities, NCERT is an implementation agency for bilateral cultural exchange programmes with other countries in the field of school education.Its headquarters are located at Sri Aurobindo Marg in New Delhi. Visit the Official NCERT website to learn more.
