1. Answer the following questions.

(i) Why do the plates move?

Answer

The plates move because of the movement of the molten magma inside the earth.

(ii) What are exogenic and endogenic forces?

Answer

The forces that work on the surface of the earth are called as exogenic forces.

The forces which act in the interior of the earth are called as endogenic forces.

(iii) What is erosion?

Answer

The wearing away of the landscape by different agents like water, wind and ice is called erosion.

(iv) How are flood plains formed?

Answer

When river overflows its banks, it flood off its neighbouring areas which deposits layers of fine soil and other

material called sediments along its banks. This leads to the formation of a flat fertile floodplain.

(v) What are sand dunes?

Answer

The low hill like structures formed due to deposition of sand at one place by the wind in the desert is called sand dunes.

(vi) How are beaches formed?

<https://www.indcareer.com/schools/ncert-solutions-for-7th-class-geography-chapter-3-our-changing-earth/>

Answer

The sea waves deposit sediments along the shores which leads to the formation of beaches.

(vii) What are ox bow lakes?

Answer

Due to continuous erosion and deposition along the sides of the meander, the ends of the meander loop come closer and closer which in some time cuts off from the river and forms a cut-off lake, called an ox-bow

lake.

2. Tick the correct answer.

(i) Which is not an erosional feature of sea waves?

- (a) Cliff (b) Beach (c) Sea cave

✓ (b) Beach

(ii) The depositional feature of a glacier is:

- (a) Flood plain (b) Beach (c) Moraine

✓ (c) Moraine

(iii) Which is caused by the sudden movements of the earth?

- (a) Volcano (b) Folding (c) Flood plain

✓ (a) Volcano

(iv) Mushroom rocks are found in:

- (a) Deserts (b) River valleys (c) Glaciers

✓ (a) Deserts

(v) Ox bow lakes are found in:

<https://www.indcareer.com/schools/ncert-solutions-for-7th-class-geography-chapter-3-our-changing-earth/>

- (a) Glaciers (b) River valleys (c) Deserts

✓ (b) River valleys

Page No: 18

3. Match the following.

- | | |
|-----------------|-------------------------|
| (i) Glacier | (a) Sea shore |
| (ii) Meanders | (b) Mushroom rock |
| (iii) Beach | (c) River of ice |
| (iv) Sand dunes | (d) Rivers |
| (v) Waterfall | (e) Vibrations of earth |
| (vi) Earthquake | (f) Sea cliff |
| - | (g) Hard bed rock |
| - | (h) Deserts |

Answer

- | | |
|-----------------|------------------|
| (i) Glacier | (c) River of ice |
| (ii) Meanders | (d) Rivers |
| (iii) Beach | (a) Sea shore |
| (iv) Sand dunes | (h) Deserts |

<https://www.indcareer.com/schools/ncert-solutions-for-7th-class-geography-chapter-3-our-changing-earth/>

- (v) Waterfall (f) Sea cliff
(vi) Earthquake (e) Vibrations of earth

4. Give reasons.

(i) Some rocks have a shape of a mushroom.

(ii) Flood plains are very fertile.

(iii) Sea caves are turned into stacks.

(iv) Buildings collapse due to earthquakes.

Answer

(i) In desert, wind is an active agent for erosion which erode the lower section of the rock more than the upper part. Therefore, some rocks have a shape of a mushroom having narrower base and wider top.

(ii) Flood plains are very fertile because floods deposit layers of fine soil and other material called sediments which is ideal for cultivation along its banks.

(iii) When cavities in sea caves become bigger and bigger only the roof of the caves remain forming sea arches. Further, erosion breaks the roof and only walls are left which forms the stacks.

(iv) During earthquakes, vibrations travel outwards from the epicentre as waves and propagate through the surface of the earth which produce sudden movements that leads to the collapse of buildings.

Chapterwise NCERT Solutions for Class 7 Geography :

- Chapter 1: Environment
- Chapter 2: Inside Our Earth
- Chapter 3: Our Changing Earth
- Chapter 4: Air
- Chapter 5: Water
- Chapter 6: Natural Vegetation and Wildlife
- Chapter 7: Human-Environment – Settlement, Transport and Communication
- Chapter 8: Human-Environment Interactions The Tropical and the Subtropical Region
- Chapter 9-Life in the Temperate Grasslands
- Chapter 10: Life in the Deserts

About NCERT

The National Council of Educational Research and Training is an autonomous organization of the Government of India which was established in 1961 as a literary, scientific, and charitable Society under the Societies Registration Act. The major objectives of NCERT and its constituent units are to: undertake, promote and coordinate research in areas related to school education; prepare and publish model textbooks, supplementary material, newsletters, journals and develop educational kits, multimedia digital materials, etc. Organise pre-service and in-service training of teachers; develop and disseminate innovative educational techniques and practices; collaborate and network with state educational departments, universities, NGOs and other educational institutions; act as a clearing house for ideas and information in matters related to school education; and act as a nodal agency for achieving the goals of Universalisation of Elementary Education. In addition to research, development, training, extension, publication and dissemination activities, NCERT is an implementation agency for bilateral cultural exchange programmes with other countries in the field of school education. Its headquarters are located at Sri Aurobindo Marg in New Delhi. [Visit the Official NCERT website](https://www.ncert.nic.in/) to learn more.
