NCERT Solutions for 9th Class Science : Chapter 6 Tissues

Class 9: Science Chapter 6 solutions. Complete Class 9 Science Chapter 6 Notes.

NCERT Solutions for 9th Class Science : Chapter 6 Tissues

NCERT 9th Science Chapter 6, class 9 Science Chapter 6 solutions

Page No: 69

1. What is a tissue?

Answer

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

Tissue is a group of cells that are similar in structure and are organised together to perform a specific task.

2. What is the utility of tissues in multi-cellular organisms?

Answer

In multicellular organisms, the different types of tissues perform different functions. Since a particular group of cells carry out only a particular function, they do it very efficiently. So, multicellular organisms possess a definite division of labour.

Page No: 74

1. Name types of simple tissues.

Answer

Simple permanent tissues are of three types:→ Parenchyma

→ Collenchyma

→ Sclerenchyma

Parenchyma tissue is of further two types:

- Aerenchyma
- Chlorenchyma

2. Where is apical meristem found?

Answer

Apical meristem is present at the growing tips of stems and roots.

3. Which tissue makes up the husk of coconut?

Answer

Sclerenchyma tissue makes up the husk of coconut.

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

4. What are the constituents of phloem?

Answer

The constituents of phloem are:

- Sieve tubes
- Companion cells
- Phloem parenchyma
- Phloem fibres

NCERT 9th Science Chapter 6, class 9 Science Chapter 6 solutions

1. Name the tissue responsible for movement in our body.

- ▶ Muscular tissue

2. What does a neuron look like?

Answer

Neuron look like a star shaped cell with a tail.

3. Give three features of cardiac muscles.

Answer

Three features of cardiac muscles are:

- Cardiac muscles are involuntary muscles that contract rapidly, but do not get fatigued.
- The cells of cardiac muscles are cylindrical, branched, and uninucleate.
- They control the contraction and relaxation of the heart.

4. What are the functions of areolar tissue?

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

Answer

Functions of areolar tissue:

- It helps in supporting internal organs.
- It helps in repairing the tissues of the skin and muscles.

Page No: 79

Exercise

1. Define the term "tissue".

Answer

Tissue is a group of cells that are similar in structure and are organized together to perform a specific task.

2. How many types of elements together make up the xylem tissue? Name them.

Answer

Xylem is composed of following elements:

- Tracheids
- Vessels
- Xylem parenchyma
- Xylem fibres

3. How are simple tissues different from complex tissues in plants?

Answer

Simple tissue	Complex tissue
These tissues consist of only one type of cells.	These tissues are made up of more than one type of cells.

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

The cells are more or less similar in structure and perform similar functions.

Different types of cells perform different functions. For example, in the xylem tissue, tracheids help in water transport, whereas parenchyma stores food.

Three types of simple tissues in plants are parenchyma, collenchyma, and sclerenchyma.

Two types of complex permanent tissues in plants are xylem and phloem.

4. Differentiate between parenchyma, collenchyma and sclerenchyma, on the basis of their cell wall.

Answer

Parenchyma	Collenchyma	Sclerenchyma
Cell walls are relatively thin, and the cells in parenchyma tissues are loosely packed.	The cell wall is irregularly thickened at the corners, and there is very little space between the cells.	The cell walls are uniformly thickened, and there are no intercellular spaces.
The cell wall in this tissue is made up of cellulose.	Pectin and hemicellulose are the major constituents of the cell wall.	An additional layer of the cell wall composed mainly of lignin is found.

5. What are the functions of the stomata?

Answer

The functions of stomata are:

→ The exchange of gases (CO₂ and O₂) with the atmosphere.

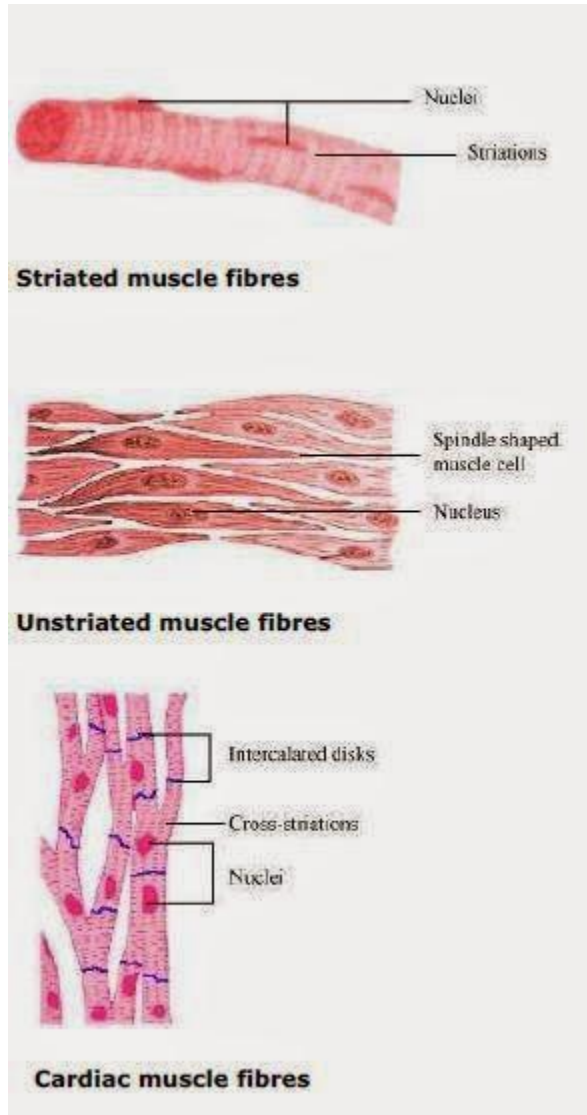

→ The loss of excess water in the form of water vapour which is known as transpiration.

6. Diagrammatically show the difference between the three types of muscle fibres.

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

Answer

The three types of muscle fibres are: Striated muscles, smooth muscles (unstriated muscle fibre), and cardiac muscles.

7. What is the specific function of the cardiac muscle?

Answer

The specific function of the cardiac muscle is to control the contraction and relaxation of the heart.

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

8. Differentiate between striated, unstriated and cardiac muscles on the basis of their structure and site/location in the body.

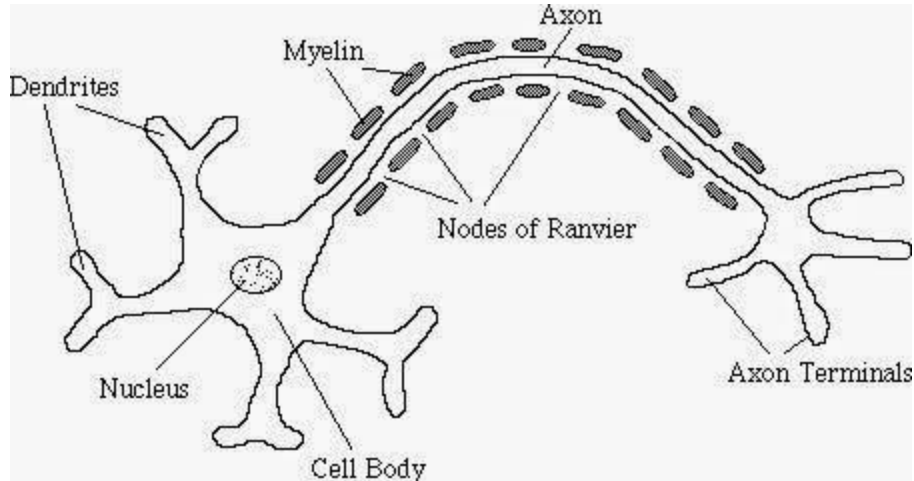

Answer

Striated muscle	Unstriated muscle	Cardiac muscle
On the basis of structure:		
Cells are cylindrical	Cells are long	Cells are cylindrical
Cells are not branched	Cells are not branched	Cells are branched
Cells are multinucleate	Cells are uninucleate	Cells are uninucleate
Alternate light and dark bands are present	There are no bands present	Faint bands are present
Its ends are blunt	Its ends are tapering	Its ends are flat and wavy
On the basis of location:		
These muscles are present in body parts such as hands, legs, tongue, etc.	These muscles control the movement of food in the alimentary canal, the contraction and relaxation of blood vessels, etc.	These muscles control the contraction and relaxation of the heart

9. Draw a labelled diagram of a neuron.

Answer

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

10. Name the following:

(a) Tissue that forms the inner lining of our mouth.

▶ Epithelial tissue

(b) Tissue that connects muscle to bone in humans.

▶ Tendon

(c) Tissue that transports food in plants.

▶ Phloem

(d) Tissue that stores fat in our body.

▶ Adipose tissue

(e) Connective tissue with a fluid matrix.

▶ Blood

(f) Tissue present in the brain.

▶ Nervous tissue

11. Identify the type of tissue in the following: skin, bark of tree, bone, lining of kidney tubule, vascular bundle.

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

Answer

- Skin: Stratified squamous epithelial tissue
- Bark of tree: Simple permanent tissue
- Bone: Connective tissue
- Lining of kidney tubule: Cuboidal epithelial tissue
- Vascular bundle: Complex permanent tissue

12. Name the regions in which parenchyma tissue is present.**Answer**

Leaves, fruits, and flowers are the regions where the parenchyma tissue is present.

13. What is the role of epidermis in plants?**Answer**

Epidermis is present on the outer surface of the entire plant body which performs the following role:

- It is a protective tissue of the plant body.
- It protects the plant against mechanical injury.
- It allows exchange of gases through the stomata.

14. How does the cork act as a protective tissue?**Answer**

The outer protective layer or bark of a tree is known as the cork. It is made up of dead cells. Therefore, it protects the plant against mechanical injury, temperature extremes, etc. It also prevents the loss of water by evaporation.

15. Complete the table:

<https://www.indcareer.com/schools/ncert-solutions-for-9th-class-science-chapter-6-tissues/>

Answer

NCERT 9th Science Chapter 6, class 9 Science Chapter 6 solutions

Chapterwise NCERT Solutions for Class 9 Science :

- Chapter 1 Matter in Our Surroundings
- Chapter 2 Is Matter Around Us Pure
- Chapter 3 Atoms And Molecules
- Chapter 4 Structure Of The Atom
- Chapter 5 The Fundamental Unit Of Life
- Chapter 6 Tissues
- Chapter 7 Diversity in Living Organisms
- Chapter 8 Motion
- Chapter 9 Force And Laws Of Motion
- Chapter 10 Gravitation
- Chapter 11 Work and Energy
- Chapter 12 Sound
- Chapter 13 Why Do We Fall ill
- Chapter 14 Natural Resources
- Chapter 15 Improvement in Food Resources

About NCERT

The National Council of Educational Research and Training is an autonomous organization of the Government of India which was established in 1961 as a literary, scientific, and charitable Society under the Societies Registration Act. The major objectives of NCERT and its constituent units are to: undertake, promote and coordinate research in areas related to school education; prepare and publish model textbooks, supplementary material, newsletters, journals and develop educational kits, multimedia digital materials, etc. Organise pre-service and in-service training of teachers; develop and disseminate innovative educational techniques and practices; collaborate and network with state educational departments, universities, NGOs and other educational institutions; act as a clearing house for ideas and information in matters related to school education; and act as a nodal agency for achieving the goals of Universalisation of Elementary Education. In addition to research, development, training, extension, publication and dissemination activities, NCERT is an implementation agency for bilateral cultural exchange programmes with other countries in the field of school education. Its headquarters are located at Sri Aurobindo Marg in New Delhi. [Visit the Official NCERT website](#) to learn more.
