Question 1:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let A be the set of all human beings in a town at a particular time. Determine whether each of the following relations are reflexive, symmetric and transitive:

(i) $R = \{(x, y) : x \text{ and } y \text{ work at the same place}\}$

(ii) $R = \{(x, y) : x \text{ and } y \text{ live in the same locality}\}$

(iii) $R = \{(x, y) : x \text{ is wife of } y\}$

(iv) $R = \{(x, y) : x \text{ is father of } y\}$

ANSWER:

(i) Reflexivity:

Let x be an arbitrary element of R . Then, $x \in R \Rightarrow x$ and x work at the same place is true since they are the same. $\Rightarrow (x, x) \in R$ So, R is a reflexive relation. Let x be an arbitrary element of R . Then, $x \in R \Rightarrow x$ and x work at the same place is true since they are the same. $\Rightarrow x, x \in R$ So, R is a reflexive relation.

Symmetry:

Let $(x, y) \in R \Rightarrow x$ and y work at the same place $\Rightarrow y$ and x work at the same place $\Rightarrow (y, x) \in R$ So, R is a symmetric relation. Let $x, y \in R \Rightarrow x$ and y work at the same place $\Rightarrow y$ and x work at the same place $\Rightarrow y, x \in R$ So, R is a symmetric relation.

Transitivity:

Let $(x, y) \in R$ and $(y, z) \in R$. Then, x and y work at the same place. y and z also work at the same place. $\Rightarrow x, y$ and z all work at the same place. $\Rightarrow x$ and z work at the same place. $\Rightarrow (x, z) \in R$ So, R is a transitive relation. Let $x, y \in R$ and $y, z \in R$. Then, x and y work at the same place. y and z also work at the same place. $\Rightarrow x, y$ and z all work at the same place. $\Rightarrow x$ and z work at the same place. $\Rightarrow x, z \in R$ So, R is a transitive relation.

(ii) Reflexivity:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let x be an arbitrary element of R . Then, $x \in R \Rightarrow x$ and x live in the same locality is true since they are the same. So, R is a reflexive relation. Let x be an arbitrary element of R . Then, $x \in R \Rightarrow x$ and x live in the same locality is true since they are the same. So, R is a reflexive relation.

Symmetry:

Let $(x, y) \in R \Rightarrow x$ and y live in the same locality $\Rightarrow y$ and x live in the same locality $\Rightarrow (y, x) \in R$. So, R is a symmetric relation. Let $x, y \in R \Rightarrow x$ and y live in the same locality $\Rightarrow y, x \in R$. So, R is a symmetric relation.

Transitivity:

Let $(x, y) \in R$ and $(y, z) \in R$. Then, x and y live in the same locality and y and z live in the same locality $\Rightarrow x, y$ and z all live in the same locality $\Rightarrow x$ and z live in the same locality $\Rightarrow (x, z) \in R$. So, R is a transitive relation. Let $x, y \in R$ and $y, z \in R$. Then, x and y live in the same locality and y and z live in the same locality $\Rightarrow x, y$ and z all live in the same locality $\Rightarrow x$ and z live in the same locality $\Rightarrow x, z \in R$. So, R is a transitive relation.

(iii)

Reflexivity:

Let x be an element of R . Then, x is wife of x cannot be true. $\Rightarrow (x, x) \notin R$. So, R is not a reflexive relation. Let x be an element of R . Then, x is wife of x cannot be true. $\Rightarrow x, x \notin R$. So, R is not a reflexive relation.

Symmetry:

Let $(x, y) \in R \Rightarrow x$ is wife of $y \Rightarrow x$ is female and y is male $\Rightarrow y$ cannot be wife of x as y is husband of $x \Rightarrow (y, x) \notin R$. So, R is not a symmetric relation. Let $x, y \in R \Rightarrow x$ is wife of $y \Rightarrow x$ is female and y is male $\Rightarrow y$ cannot be wife of x as y is husband of $x \Rightarrow y, x \notin R$. So, R is not a symmetric relation.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Transitivity:

Let $(x, y) \in R$, but $(y, z) \notin R$. Since x is wife of y , but y cannot be the wife of z , y is husband of x . $\Rightarrow x$ is not the wife of $z \Rightarrow (x, z) \in R$. So, R is a transitive relation. Let $x, y \in R$, but $y, z \notin R$. Since x is wife of y , but y cannot be the wife of z , y is husband of x . $\Rightarrow x$ is not the wife of $z \Rightarrow x, z \in R$. So, R is a transitive relation.

(iv)

Reflexivity:

Let x be an arbitrary element of R . Then, x is father of x cannot be true since no one can be father of himself. So, R is not a reflexive relation. Let x be an arbitrary element of R . Then, x is father of x cannot be true since no one can be father of himself. So, R is not a reflexive relation.

Symmetry:

Let $(x, y) \in R \Rightarrow x$ is father of $y \Rightarrow y$ is son/daughter of $x \Rightarrow (y, x) \notin R$. So, R is not a symmetric relation. Let $x, y \in R \Rightarrow x$ is father of $y \Rightarrow y$ is son/daughter of $x \Rightarrow y, x \notin R$. So, R is not a symmetric relation.

Transitivity:

Let $(x, y) \in R$ and $(y, z) \in R$. Then, x is father of y and y is father of $z \Rightarrow x$ is grandfather of $z \Rightarrow (x, z) \notin R$. So, R is not a transitive relation. Let $x, y \in R$ and $y, z \in R$. Then, x is father of y and y is father of $z \Rightarrow x$ is grandfather of $z \Rightarrow x, z \notin R$. So, R is not a transitive relation.

Page No 1.10:

Question 2:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Three relations R_1 , R_2 and R_3 are defined on a set $A = \{a, b, c\}$ as follows:

$$R_1 = \{(a, a), (a, b), (a, c), (b, b), (b, c), (c, a), (c, b), (c, c)\}$$

$$R_2 = \{(a, a)\}$$

$$R_3 = \{(b, c)\}$$

$$R_4 = \{(a, b), (b, c), (c, a)\}.$$

Find whether or not each of the relations R_1 , R_2 , R_3 , R_4 on A is (i) reflexive (ii) symmetric and (iii) transitive.

ANSWER:

(i) R_1

Reflexive:

Clearly, (a, a) , (b, b) and $(c, c) \in R_1$

So, R_1 is reflexive.

Symmetric:

We see that the ordered pairs obtained by interchanging the components of R_1 are also in R_1 .

So, R_1 is symmetric.

Transitive:

Here,

$(a, b) \in R_1$, $(b, c) \in R_1$ and also $(a, c) \in R_1$
 $a, b \in R_1$, $b, c \in R_1$ and also $a, c \in R_1$

So, R_1 is transitive.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(ii) R_2

Reflexive: Clearly $(a,a) \in R_2, a \in R_2$. So, R_2 is reflexive.

Symmetric: Clearly $(a,a) \in R \Rightarrow (a,a) \in R, a \in R \Rightarrow a, a \in R$. So, R_2 is symmetric.

Transitive: R_2 is clearly a transitive relation, since there is only one element in it.

(iii) R_3

Reflexive:

Here,

$(b, b) \notin R_3$ neither $(c, c) \in R_3, b, c \in R_3$ neither $c, c \in R_3$

So, R_3 is not reflexive.

Symmetric:

Here,

$(b, c) \in R_3$, but $(c, b) \notin R_3$ So, R_3 is not symmetric. $b, c \in R_3$, but $c, b \notin R_3$ So, R_3 is not symmetric.

Transitive:

Here, R_3 has only two elements. Hence, R_3 is transitive.

(iv) R_4

Reflexive:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Here,

$(a, a) \notin R_4, (b, b) \notin R_4, (c, c) \notin R_4$ So, R_4 is not reflexive. $a, a \notin R_4, b, b \notin R_4, c, c \notin R_4$ So, R_4 is not reflexive.

Symmetric:

Here,

$(a, b) \in R_4$, but $(b, a) \notin R_4$. So, R_4 is not symmetric. $a, b \in R_4$, but $b, a \notin R_4$. So, R_4 is not symmetric.

Transitive:

Here,

$(a, b) \in R_4, (b, c) \in R_4$, but $(a, c) \notin R_4$ So, R_4 is not transitive. $a, b \in R_4, b, c \in R_4$, but $a, c \notin R_4$ So, R_4 is not transitive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.10:

Question 3:

Test whether the following relations R_1, R_2 , and R_3 are (i) reflexive (ii) symmetric and (iii) transitive:

(i) R_1 on Q_0 defined by $(a, b) \in R_1 \Leftrightarrow a = 1/b$.

(ii) R_2 on Z defined by $(a, b) \in R_2 \Leftrightarrow |a - b| \leq 5$

(iii) R_3 on R defined by $(a, b) \in R_3 \Leftrightarrow a^2 - 4ab + 3b^2 = 0$.

ANSWER:

(i) Reflexivity:

Let a be an arbitrary element of R_1 . Then,

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$a \in R_1 \Rightarrow a \neq 1a$ for all $a \in Q_0$ So, R_1 is not reflexive. $a \in R_1 \Rightarrow a \neq 1a$ for all $a \in Q_0$ So, R_1 is not reflexive.

Symmetry:

Let $(a, b) \in R_1 \in R_1$. Then,

$(a, b) \in R_1 \Rightarrow a = 1b \Rightarrow b = 1a \Rightarrow (b, a) \in R_1$ So, R_1 is symmetric. $a, b \in R_1 \Rightarrow a = 1b \Rightarrow b = 1a \Rightarrow b, a \in R_1$ So, R_1 is symmetric.

Transitivity:

Here,

$(a, b) \in R_1$ and $(b, c) \in R_2 \Rightarrow a = 1b$ and $b = 1c \Rightarrow a = 11c = c \Rightarrow a \neq 1c \Rightarrow (a, c) \notin R_1$ So, R_1 is not transitive. $a, b \in R_1$ and $b, c \in R_2 \Rightarrow a = 1b$ and $b = 1c \Rightarrow a = 11c = c \Rightarrow a \neq 1c \Rightarrow a, c \notin R_1$ So, R_1 is not transitive.

(ii)

Reflexivity:

Let a be an arbitrary element of R_2 . Then,

$a \in R_2 \Rightarrow |a-a| = 0 \leq 5$ So, R_1 is reflexive. $a \in R_2 \Rightarrow a-a = 0 \leq 5$ So, R_1 is reflexive.

Symmetry:

Let $(a, b) \in R_2 \Rightarrow |a-b| \leq 5 \Rightarrow |b-a| \leq 5$ [Since, $|a-b| = |b-a| \Rightarrow (b, a) \in R_2$ So, R_2 is symmetric. Let $a, b \in R_2 \Rightarrow a-b \leq 5 \Rightarrow b-a \leq 5$ Since, $a-b = b-a \Rightarrow b, a \in R_2$ So, R_2 is symmetric.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Transitivity:

Let $(1, 3) \in R_2$ and $(3, 7) \in R_2 \Rightarrow |1-3| \leq 5$ and $|3-7| \leq 5$ But $|1-7| \not\leq 5 \Rightarrow (1, 7) \notin R_2$ So, R_2 is not transitive. Let $1, 3 \in R_2$ and $3, 7 \in R_2 \Rightarrow 1-3 \leq 5$ and $3-7 \leq 5$ But $1-7 \not\leq 5 \Rightarrow (1, 7) \notin R_2$ So, R_2 is not transitive.

(iii)

Reflexivity: Let a be an arbitrary element of R_3 . Then,

$$a \in R_3 \Rightarrow a^2 - 4a \times a + 3a^2 = 0 \text{ So, } R_3 \text{ is reflexive. } a \in R_3 \Rightarrow a^2 - 4a \times a + 3a^2 = 0 \text{ So, } R_3 \text{ is reflexive.}$$

Symmetry:

Let $(a, b) \in R_3 \Rightarrow a^2 - 4ab + 3b^2 = 0$ But $b^2 - 4ba + 3a^2 \neq 0$ for all $a, b \in R$ So, R_3 is not symmetric. Let $a, b \in R_3 \Rightarrow a^2 - 4ab + 3b^2 = 0$ But $b^2 - 4ba + 3a^2 \neq 0$ for all $a, b \in R$ So, R_3 is not symmetric.

Transitivity:

$(1, 2) \in R_3$ and $(2, 3) \in R_3 \Rightarrow 1 - 8 + 6 = 0$ and $4 - 24 + 27 = 0$ But $1 - 12 + 9 \neq 0$ So, R_3 is not transitive. $1, 2 \in R_3$ and $2, 3 \in R_3 \Rightarrow 1 - 8 + 6 = 0$ and $4 - 24 + 27 = 0$ But $1 - 12 + 9 \neq 0$ So, R_3 is not transitive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.10:

Question 4:

Let $A = \{1, 2, 3\}$, and let $R_1 = \{(1, 1), (1, 3), (3, 1), (2, 2), (2, 1), (3, 3)\}$, $R_2 = \{(2, 2), (3, 1), (1, 3)\}$, $R_3 = \{(1, 3), (3, 3)\}$. Find whether or not each of the relations R_1, R_2, R_3 on A is (i) reflexive (ii) symmetric (iii) transitive.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

ANSWER:

(1) R_1

Reflexivity:

Here,

$(1, 1), (2, 2), (3, 3) \in R$ So, R_1 is reflexive. $1, 1, 2, 2, 3, 3 \in R$ So, R_1 is reflexive.

Symmetry:

Here, $(2, 1) \in R_1$, but $(1, 2) \notin R_1$ So, R_1 is not symmetric. Here, $2, 1 \in R_1$, but $1, 2 \notin R_1$ So, R_1 is not symmetric.

Transitivity:

Here, $(2, 1) \in R_1$ and $(1, 3) \in R_1$, but $(2, 3) \notin R_1$ So, R_1 is not transitive. Here, $2, 1 \in R_1$ and $1, 3 \in R_1$, but $2, 3 \notin R_1$ So, R_1 is not transitive.

(2) R_2

Reflexivity:

Clearly, $(1, 1)$ and $(3, 3) \notin R_2$ So, R_2 is not reflexive. Clearly, $1, 1$ and $3, 3 \notin R_2$ So, R_2 is not reflexive.

Symmetry:

Here, $(1, 3) \in R_2$ and $(3, 1) \in R_2$ So, R_2 is symmetric. Here, $1, 3 \in R_2$ and $3, 1 \in R_2$ So, R_2 is symmetric.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Transitivity:

Here, $(1, 3) \in R_2$ and $(3, 1) \in R_2$ But $(3, 3) \notin R_2$ So, R_2 is not transitive. Here, $1, 3 \in R_2$ and $3, 1 \in R_2$ But $3, 3 \notin R_2$ So, R_2 is not transitive.

(3) R_3

Reflexivity:

Clearly, $(1, 1) \notin R_3$ So, R_3 is not reflexive. Clearly, $1, 1 \notin R_3$ So, R_3 is not reflexive.

Symmetry:

Here, $(1, 3) \in R_3$, but $(3, 1) \notin R_3$ So, R_3 is not symmetric. Here, $1, 3 \in R_3$, but $3, 1 \notin R_3$ So, R_3 is not symmetric.

Transitivity:

Here, $(1, 3) \in R_3$ and $(3, 3) \in R_3$ Also, $(1, 3) \in R_3$ So, R_3 is transitive. Here, $1, 3 \in R_3$ and $3, 3 \in R_3$ Also, $1, 3 \in R_3$ So, R_3 is transitive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.11:

Question 5:

The following relations are defined on the set of real numbers.

(i) aRb if $a - b > 0$

(ii) aRb if $1 + ab > 0$

(iii) aRb if $|a| \leq b$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Find whether these relations are reflexive, symmetric or transitive.

ANSWER:

(i)

Reflexivity: Let a be an arbitrary element of R . Then,

$a \in R$ But $a - a = 0 \not> 0$ So, this relation is not reflexive. $a \in R$ But $a - a = 0 \not> 0$ So, this relation is not reflexive.

Symmetry:

Let $(a, b) \in R \Rightarrow a - b > 0 \Rightarrow -(b - a) > 0 \Rightarrow b - a < 0$ So, the given relation is not symmetric. Let $a, b \in R \Rightarrow a - b > 0 \Rightarrow -(b - a) > 0 \Rightarrow b - a < 0$ So, the given relation is not symmetric.

Transitivity:

Let $(a, b) \in R$ and $(b, c) \in R$. Then, $a - b > 0$ and $b - c > 0$ Adding the two, we get $a - b + b - c > 0 \Rightarrow a - c > 0 \Rightarrow (a, c) \in R$. So, the given relation is transitive. Let $a, b \in R$ and $b, c \in R$. Then, $a - b > 0$ and $b - c > 0$ Adding the two, we get $a - b + b - c > 0 \Rightarrow a - c > 0 \Rightarrow a, c \in R$. So, the given relation is transitive.

(ii)

Reflexivity: Let a be an arbitrary element of R . Then,

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$a \in R \Rightarrow 1+a^2 > 0$ i.e. $1+a^2 > 0$ [Since, square of any number is positive] So, the given relation is reflexive.

Symmetry:

Let $(a, b) \in R \Rightarrow 1+ab > 0 \Rightarrow 1+ba > 0 \Rightarrow (b, a) \in R$ So, the given relation is symmetric.

Transitivity:

Let $(a, b) \in R$ and $(b, c) \in R \Rightarrow 1+ab > 0$ and $1+bc > 0$ But $1+ac > 0 \Rightarrow (a, c) \notin R$ So, the given relation is not transitive.

(iii)

Reflexivity: Let a be an arbitrary element of R . Then,

$a \in R \Rightarrow |a| \leq a$ [Since, $|a| = a$] So, R is not reflexive.

Symmetry:

Let $(a, b) \in R \Rightarrow |a| \leq b \Rightarrow |b| \leq a$ for all $a, b \in R \Rightarrow (b, a) \in R$ So, R is not symmetric.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Transitivity:

Let $(a, b) \in R$ and $(b, c) \in R \Rightarrow |a| \leq b$ and $|b| \leq c$ Multiplying the corresponding sides, we get $|a| |b| \leq bc \Rightarrow |a| \leq c \Rightarrow (a, c) \in R$ Thus, R is transitive. Let $a, b \in R$ and $b, c \in R \Rightarrow a \leq b$ and $b \leq c$ Multiplying the corresponding sides, we get $a \leq b \leq c \Rightarrow a \leq c \Rightarrow a, c \in R$ Thus, R is transitive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.11:

Question 6:

Check whether the relation R defined on the set $A = \{1, 2, 3, 4, 5, 6\}$ as $R = \{(a, b) : b = a + 1\}$ is reflexive, symmetric or transitive.

ANSWER:

Reflexivity:

Let a be an arbitrary element of R . Then, $a = a + 1$ cannot be true for all $a \in A \Rightarrow (a, a) \notin R$ So, R is not reflexive on A . Let a be an arbitrary element of R . Then, $a = a + 1$ cannot be true for all $a \in A \Rightarrow a, a \notin R$ So, R is not reflexive on A .

Symmetry:

Let $(a, b) \in R \Rightarrow b = a + 1 \Rightarrow -a = -b + 1 \Rightarrow a = b - 1$ Thus, $(b, a) \notin R$ So, R is not symmetric on A . Let $a, b \in R \Rightarrow b = a + 1 \Rightarrow -a = -b + 1 \Rightarrow a = b - 1$ Thus, $b, a \notin R$ So, R is not symmetric on A .

Transitivity:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let $(1, 2)$ and $(2, 3) \in R \Rightarrow 2=1+1$ and $3=2+1$ is true. But $3 \neq 1+1 \Rightarrow (1, 3) \notin R$ So, R is not transitive on A . Let $1, 2$ and $2, 3 \in R \Rightarrow 2=1+1$ and $3=2+1$ is true. But $3 \neq 1+1 \Rightarrow 1, 3 \notin R$ So, R is not transitive on A .

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.11:

Question 7:

Check whether the relation R on \mathbf{R} defined by $R = \{(a, b) : a \leq b^3\}$ is reflexive, symmetric or transitive.

ANSWER:

Reflexivity:

Since $12 > (12)^3, (12, 12) \notin R$ So, R is not reflexive. Since $12 > 12^3, 12, 12 \notin R$ So, R is not reflexive.

Symmetry:

Since $(12, 2) \in R, 12 < 2^3$ But $2 > (12)^3 \Rightarrow (2, 12) \notin R$ So, R is not symmetric. Since $12, 2 \in R, 12 < 2^3$ But $2 > 12^3 \Rightarrow 2, 12 \notin R$ So, R is not symmetric.

Transitivity:

Since $(7, 3) \in R$ and $(3, 313) \in R, 7 < 3^3$ and $3 = (313)^3$ But $7 > (313)^3 \Rightarrow (7, 313) \notin R$ So, R is not transitive. Since $7, 3 \in R$ and $3, 313 \in R, 7 < 3^3$ and $3 = 313^3$ But $7 > 313^3 \Rightarrow 7, 313 \notin R$ So, R is not transitive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.11:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Question 8:

Prove that every identity relation on a set is reflexive, but the converse is not necessarily true.

ANSWER:

Let A be a set. Then,

Identity relation $I_A = I_A$ is reflexive, since $(a, a) \in A \forall a$ identity relation $I_A = I_A$ is reflexive, since $a, a \in A \forall a$

The converse of it need not be necessarily true.

Consider the set $A = \{1, 2, 3\}$

Here,

Relation $R = \{(1, 1), (2, 2), (3, 3), (2, 1), (1, 3)\}$ is reflexive on A .

However, R is not an identity relation.

Page No 1.11:**Question 9:**

If $A = \{1, 2, 3, 4\}$ define relations on A which have properties of being

- (i) reflexive, transitive but not symmetric
- (ii) symmetric but neither reflexive nor transitive
- (iii) reflexive, symmetric and transitive.

ANSWER:

(i) The relation on A having properties of being reflexive, transitive, but not symmetric is

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$$R = \{(1, 1), (2, 2), (3, 3), (4, 4), (2, 1)\}$$

Relation R satisfies reflexivity and transitivity. $\Rightarrow (1, 1), (2, 2), (3, 3) \in R$ and $(1, 1), (2, 1) \in R \Rightarrow (1, 1) \in R$ However, $(2, 1) \in R$, but $(1, 2) \notin R$ Relation R satisfies reflexivity and transitivity. $\Rightarrow 1, 1, 2, 2, 3, 3 \in R$ and $1, 1, 2, 1 \in R \Rightarrow 1, 1 \in R$ However, $2, 1 \in R$, but $1, 2 \notin R$

(ii) The relation on A having properties of being symmetric, but neither reflexive nor transitive is

$$R = \{(1, 2), (2, 1)\}$$

The relation R on A is neither reflexive nor transitive, but symmetric.

(iii) The relation on A having properties of being symmetric, reflexive and transitive is

$$R = \{(1, 1), (2, 2), (3, 3), (4, 4), (1, 2), (2, 1)\}$$

The relation R is an equivalence relation on A .

Page No 1.11:

Question 10:

Let R be a relation defined on the set of natural numbers N as

$$R = \{(x, y) : x, y \in N, 2x + y = 41\}$$

Find the domain and range of R . Also, verify whether R is (i) reflexive, (ii) symmetric (iii) transitive.

ANSWER:

Domain of R is the values of x and range of R is the values of y that together should satisfy $2x + y = 41$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

So,

Domain of $R = \{1, 2, 3, 4, \dots, 20\}$

Range of $R = \{1, 3, 5, \dots, 37, 39\}$

Reflexivity: Let x be an arbitrary element of R . Then,

$x \in R \Rightarrow 2x+x=41$ cannot be true. $\Rightarrow (x, x) \notin R$ So, R is not reflexive. $x \in R \Rightarrow 2x+x=41$ cannot be true. $\Rightarrow x, x \notin R$ So, R is not reflexive.

Symmetry:

Let $(x, y) \in R$. Then, $2x+y=41 \Rightarrow 2y+x = 41 \Rightarrow (y, x) \notin R$ So, R is not symmetric. Let $x, y \in R$. Then, $2x+y=41 \Rightarrow 2y+x = 41 \Rightarrow y, x \notin R$ So, R is not symmetric.

Transitivity:

Let (x, y) and $(y, z) \in R \Rightarrow 2x+y=41$ and $2y+z=41 \Rightarrow 2x+z=2x+41-2y$ $41-y-2y=41-3y \Rightarrow (x, z) \notin R$ Thus, R is not transitive. Let x, y and $y, z \in R \Rightarrow 2x+y=41$ and $2y+z=41 \Rightarrow 2x+z=2x+41-2y$ $41-y-2y=41-3y \Rightarrow x, z \notin R$ Thus, R is not transitive.

Page No 1.11:

Question 11:

Is it true that every relation which is symmetric and transitive is also reflexive? Give reasons.

ANSWER:

No, it is not true.

Consider a set $A = \{1, 2, 3\}$ and relation R on A such that $R = \{(1, 2), (2, 1), (2, 3), (1, 3)\}$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

The relation R on A is symmetric and transitive. However, it is not reflexive.

$(1, 1), (2, 2)$ and $(3, 3) \notin R$, $1, 2$ and $3, 3 \notin R$

Hence, R is not reflexive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.11:

Question 12:

An integer m is said to be related to another integer n if m is a multiple of n . Check if the relation is symmetric, reflexive and transitive.

ANSWER:

$R = \{(m, n) : m, n \in \mathbb{Z}, m = kn, \text{ where } k \in \mathbb{N}\}$
Reflexivity: Let m be an arbitrary element of R . Then, $m = km$ is true for $k = 1 \Rightarrow (m, m) \in R$. Thus, R is reflexive.
Symmetry: Let $(m, n) \in R \Rightarrow m = kn$ for some $k \in \mathbb{N} \rightarrow n = 1km \Rightarrow (n, m) \notin R$. Thus, R is not symmetric.
Transitivity: Let (m, n) and $(n, o) \in R \Rightarrow m = kn$ and $n = lo$ for some $k, l \in \mathbb{N} \Rightarrow m = (kl)o$. Here, $kl \in \mathbb{N} \Rightarrow (m, o) \in R$. Thus, R is transitive.
 $R = \{(m, n) : m, n \in \mathbb{Z}, m = kn, \text{ where } k \in \mathbb{N}\}$
Reflexivity: Let m be an arbitrary element of R . Then, $m = km$ is true for $k = 1 \Rightarrow (m, m) \in R$. Thus, R is reflexive.
Symmetry: Let $(m, n) \in R \Rightarrow m = kn$ for some $k \in \mathbb{N} \rightarrow n = 1km \Rightarrow (n, m) \notin R$. Thus, R is not symmetric.
Transitivity: Let (m, n) and $(n, o) \in R \Rightarrow m = kn$ and $n = lo$ for some $k, l \in \mathbb{N} \Rightarrow m = (kl)o$. Here, $kl \in \mathbb{N} \Rightarrow (m, o) \in R$. Thus, R is transitive.

Page No 1.11:

Question 13:

Show that the relation ' \geq ' on the set R of all real numbers is reflexive and transitive but not symmetric.

ANSWER:

Let R be the set such that $R = \{(a, b) : a, b \in \mathbb{R}; a \geq b \in \mathbb{R}; a \geq b\}$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Reflexivity:

Let a be an arbitrary element of R . $\Rightarrow a \in R \Rightarrow a = a \Rightarrow a \geq a$ is true for $a = a \Rightarrow (a, a) \in R$
Hence, R is reflexive. Let a be an arbitrary element of R . $\Rightarrow a \in R \Rightarrow a = a \Rightarrow a \geq a$ is true for $a = a \Rightarrow a, a \in R$ Hence, R is reflexive.

Symmetry:

Let $(a, b) \in R \Rightarrow a \geq b$ is same as $b \leq a$, but not $b \geq a$ Thus, $(b, a) \notin R$ Hence, R is not symmetric. Let $a, b \in R \Rightarrow a \geq b$ is same as $b \leq a$, but not $b \geq a$ Thus, $(b, a) \notin R$ Hence, R is not symmetric.

Transitivity:

Let (a, b) and $(b, c) \in R \Rightarrow a \geq b$ and $b \geq c \Rightarrow a \geq b \geq c \Rightarrow a \geq c \Rightarrow (a, c) \in R$ Hence, R is transitive. Let a, b and $b, c \in R \Rightarrow a \geq b$ and $b \geq c \Rightarrow a \geq b \geq c \Rightarrow a \geq c \Rightarrow a, c \in R$ Hence, R is transitive.

Page No 1.11:

Question 14:

Give an example of a relation which is

- (i) reflexive and symmetric but not transitive;
- (ii) reflexive and transitive but not symmetric;
- (iii) symmetric and transitive but not reflexive;
- (iv) symmetric but neither reflexive nor transitive.
- (v) transitive but neither reflexive nor symmetric.

ANSWER:

Suppose A be the set such that $A = \{1, 2, 3\}$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(i) Let R be the relation on A such that

$$R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (2, 3)\}$$

Thus,

R is reflexive and symmetric, but not transitive.

(ii) Let R be the relation on A such that

$$R = \{(1, 1), (2, 2), (3, 3), (1, 2), (1, 3), (2, 3)\}$$

Clearly, the relation R on A is reflexive and transitive, but not symmetric.

(iii) Let R be the relation on A such that

$$R = \{(1, 2), (2, 1), (1, 3), (3, 1), (2, 3)\}$$

We see that the relation R on A is symmetric and transitive, but not reflexive.

(iv) Let R be the relation on A such that

$$R = \{(1, 2), (2, 1), (1, 3), (3, 1)\}$$

The relation R on A is symmetric, but neither reflexive nor transitive.

(v) Let R be the relation on A such that

$$R = \{(1, 2), (2, 3), (1, 3)\}$$

The relation R on A is transitive, but neither symmetric nor reflexive.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Page No 1.11:

Question 15:

Given the relation $R = \{(1, 2), (2, 3)\}$ on the set $A = \{1, 2, 3\}$, add a minimum number of ordered pairs so that the enlarged relation is symmetric, transitive and reflexive.

ANSWER:

We have,

$$R = \{(1, 2), (2, 3)\}$$

R can be a transitive only when the elements $(1, 3)$ is added

R can be a reflexive only when the elements $(1, 1), (2, 2), (3, 3)$ are added

R can be a symmetric only when the elements $(2, 1), (3, 1)$ and $(3, 2)$ are added

So, the required enlarged relation, $R' = \{(1, 1), (1, 2), (1, 3), (2, 1), (2, 2), (2, 3), (3, 1), (3, 2), (3, 3)\} = A \times A$

Page No 1.11:

Question 16:

Let $A = \{1, 2, 3\}$ and $R = \{(1, 2), (1, 1), (2, 3)\}$ be a relation on A . What minimum number of ordered pairs may be added to R so that it may become a transitive relation on A .

ANSWER:

We have,

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$A = \{1, 2, 3\}$ and $R = \{(1, 2), (1, 1), (2, 3)\}$

To make R a transitive relation on A , $(1, 3)$ must be added to it.

So, the minimum number of ordered pairs that may be added to R to make it a transitive relation is 1.

Page No 1.11:

Question 17:

Let $A = \{a, b, c\}$ and the relation R be defined on A as follows: $R = \{(a, a), (b, c), (a, b)\}$. Then, write minimum number of ordered pairs to be added in R to make it reflexive and transitive.

ANSWER:

We have,

$A = \{a, b, c\}$ and $R = \{(a, a), (b, c), (a, b)\}$

R can be a reflexive relation only when elements (b, b) and (c, c) are added to it

R can be a transitive relation only when the element (a, c) is added to it

So, the minimum number of ordered pairs to be added in R is 3.

Question 18:

Each of the following defines a relation on \mathbf{N} :

(i) $x > y, x, y \in \mathbf{N}$

(ii) $x + y = 10, x, y \in \mathbf{N}$

(iii) xy is square of an integer, $x, y \in \mathbf{N}$

(iv) $x + 4y = 10, x, y \in \mathbf{N}$

Determine which of the above relations are reflexive, symmetric and transitive.

ANSWER:

(i) We have,

$$R = \{(x, y) : x > y, x, y \in \mathbf{N}\}$$

As, $x = x \forall x \in \mathbf{N} \Rightarrow (x, x) \notin R$ So, R is not a reflexive relation
Let $(x, y) \in R \Rightarrow x > y$ but $y < x \Rightarrow (y, x) \notin R$ So, R is not a symmetric relation
Let $(x, y) \in R$ and $(y, z) \in R \Rightarrow x > y$ and $y > z \Rightarrow x > z \Rightarrow (x, z) \in R$ So, R is a transitive relation
As, $x = x \forall x \in \mathbf{N} \Rightarrow (x, x) \notin R$ So, R is not a reflexive relation
Let $x, y \in R \Rightarrow x > y$ but $y < x \Rightarrow (y, x) \notin R$ So, R is not a symmetric relation
Let $x, y \in R$ and $(y, z) \in R \Rightarrow x > y$ and $y > z \Rightarrow x > z \Rightarrow (x, z) \in R$ So, R is a transitive relation

(ii) We have,

$$R = \{(x, y) : x + y = 10, x, y \in \mathbf{N}\}$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$R = \{(1,9), (2,8), (3,7), (4,6), (5,5), (6,4), (7,3), (8,2), (9,1)\}$ As, $(1,1) \notin R$ So, R is not a reflexive relation
 Let $(x,y) \in R \Rightarrow x+y=10 \Rightarrow y+x=10 \Rightarrow (y,x) \in R$ So, R is a symmetric relation
 As, $(1,9) \in R$ and $(9,1) \in R$ but $(1,1) \notin R$ So, R is not a transitive relation
 $R = \{1,9,2,8,3,7,4,6,5,5,6,4,7,3,8,2,9,1\}$ As, $1,1 \notin R$ So, R is not a reflexive relation
 Let $x,y \in R \Rightarrow x+y=10 \Rightarrow y+x=10 \Rightarrow y,x \in R$ So, R is a symmetric relation
 As, $1,9 \in R$ and $9,1 \in R$ but $1,1 \notin R$ So, R is not a transitive relation

(iii) We have,

$$R = \{(x, y) : xy \text{ is square of an integer, } x, y \in \mathbf{N}\}$$

As, $x \times x = x^2$, which is a square of an integer $x \Rightarrow (x,x) \in R$ So, R is a reflexive relation
 Let $(x,y) \in R \Rightarrow xy$ is square of an integer $\Rightarrow yx$ is also a square of an integer $\Rightarrow (y,x) \in R$ So, R is a symmetric relation
 Let $(x,y) \in R$ and $(y,z) \in R \Rightarrow xy$ is square of an integer and yz is also a square of an integer $\Rightarrow xz$ must be a square of an integer $\Rightarrow (x,z) \in R$ So, R is a transitive relation
 As, $x \times x = x^2$, which is a square of an integer $x \Rightarrow x,x \in R$ So, R is a reflexive relation
 Let $x,y \in R \Rightarrow xy$ is square of an integer $\Rightarrow yx$ is also a square of an integer $\Rightarrow y,x \in R$ So, R is a symmetric relation
 Let $x,y \in R$ and $y,z \in R \Rightarrow xy$ is square of an integer and yz is also a square of an integer $\Rightarrow xz$ must be a square of an integer $\Rightarrow x,z \in R$ So, R is a transitive relation

(iv) We have,

$$R = \{(x, y) : x + 4y = 10, x, y \in \mathbf{N}\}$$

$R = \{(2,4), (6,1)\}$ As, $(2,2) \notin R$ So, R is not a reflexive relation
 As, $(2,4) \in R$ but $(4,2) \notin R$ So, R is not a symmetric relation
 As, $(2,4) \in R$ but 4 is not related to any natural number So, R

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

is a transitive relation $R = \{(2,4), (4,6), (1,1)\}$ As, $2, 2 \notin R$ So, R is not a reflexive relation As, $2, 4 \in R$ but $4, 2 \notin R$ So, R is not a symmetric relation As, $2, 4 \in R$ but 4 is not related to any natural number So, R is a transitive relation

Page No 1.26:

Question 1:

Show that the relation R defined by $R = \{(a, b) : a - b \text{ is divisible by } 3; a, b \in \mathbb{Z}\}$ is an equivalence relation.

ANSWER:

We observe the following relations of relation R .

Reflexivity:

Let a be an arbitrary element of \mathbb{Z} . Then, $a - a = 0 = 0 \times 3 \Rightarrow a - a$ is divisible by $3 \Rightarrow (a, a) \in R$ for all $a \in \mathbb{Z}$ So, R is reflexive on \mathbb{Z} . Let a be an arbitrary element of \mathbb{Z} . Then, $a - a = 0 = 0 \times 3 \Rightarrow a - a$ is divisible by $3 \Rightarrow a, a \in R$ for all $a \in \mathbb{Z}$ So, R is reflexive on \mathbb{Z} .

Symmetry:

Let $(a, b) \in R \Rightarrow a - b$ is divisible by $3 \Rightarrow a - b = 3p$ for some $p \in \mathbb{Z} \Rightarrow b - a = 3(-p)$ Here, $-p \in \mathbb{Z} \Rightarrow b - a$ is divisible by $3 \Rightarrow (b, a) \in R$ for all $a, b \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} . Let $a, b \in \mathbb{Z} \Rightarrow a - b$ is divisible by $3 \Rightarrow a - b = 3p$ for some $p \in \mathbb{Z} \Rightarrow b - a = 3(-p)$ Here, $-p \in \mathbb{Z} \Rightarrow b - a$ is divisible by $3 \Rightarrow (b, a) \in R$ for all $a, b \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} .

Transitivity:

Let (a, b) and $(b, c) \in R \Rightarrow a - b$ and $b - c$ are divisible by $3 \Rightarrow a - b = 3p$ for some $p \in \mathbb{Z}$ and $b - c = 3q$ for some $q \in \mathbb{Z}$ Adding the above two, we get $a - b + b - c = 3p + 3q \Rightarrow a - c = 3(p + q)$ Here, $p + q \in \mathbb{Z} \Rightarrow a - c$ is divisible by $3 \Rightarrow (a, c) \in R$ for all $a, c \in \mathbb{Z}$ So, R is transitive on \mathbb{Z} . Let a, b and $b, c \in \mathbb{Z} \Rightarrow a - b$ and $b - c$ are divisible by $3 \Rightarrow a - b = 3p$ for some $p \in \mathbb{Z}$ and

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$b-c=3q$ for some $q \in \mathbb{Z}$ Adding the above two, we get $a-b+b-c=3p+3q \Rightarrow a-c=3(p+q)$ Here, $p+q \in \mathbb{Z} \Rightarrow a-c$ is divisible by 3 $\Rightarrow a, c \in R$ for all $a, c \in \mathbb{Z}$ So, R is transitive on \mathbb{Z} .

Hence, R is an equivalence relation on \mathbb{Z} .

Page No 1.26:

Question 2:

Show that the relation R on the set \mathbb{Z} of integers, given by

$R = \{(a, b) : 2 \text{ divides } a - b\}$, is an equivalence relation.

ANSWER:

We observe the following properties of relation R .

Reflexivity:

Let a be an arbitrary element of the set \mathbb{Z} . Then, $a \in R \Rightarrow a-a=0=0 \times 2 \Rightarrow 2$ divides $a-a \Rightarrow (a, a) \in R$ for all $a \in \mathbb{Z}$ So, R is reflexive on \mathbb{Z} . Let a be an arbitrary element of the set \mathbb{Z} . Then, $a \in R \Rightarrow a-a=0=0 \times 2 \Rightarrow 2$ divides $a-a \Rightarrow a, a \in R$ for all $a \in \mathbb{Z}$ So, R is reflexive on \mathbb{Z} .

Symmetry:

Let $(a, b) \in R \Rightarrow 2$ divides $a-b \Rightarrow a-b=2p$ for some $p \in \mathbb{Z} \Rightarrow b-a=2(-p)$ Here, $-p \in \mathbb{Z} \Rightarrow 2$ divides $b-a \Rightarrow (b, a) \in R$ for all $a, b \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} . Let $a, b \in R \Rightarrow 2$ divides $a-b \Rightarrow a-b=2p$ for some $p \in \mathbb{Z} \Rightarrow b-a=2(-p)$ Here, $-p \in \mathbb{Z} \Rightarrow 2$ divides $b-a \Rightarrow b, a \in R$ for all $a, b \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} .

Transitivity:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let (a, b) and $(b, c) \in R \Rightarrow 2$ divides $a-b$ and 2 divides $b-c \Rightarrow a-b=2p$ and $b-c=2q$ for some $p, q \in \mathbb{Z}$. Adding the above two, we get $a-b+b-c=2p+2q \Rightarrow a-c=2(p+q)$. Here, $p+q \in \mathbb{Z} \Rightarrow 2$ divides $a-c \Rightarrow (a, c) \in R$ for all $a, c \in \mathbb{Z}$. So, R is transitive on \mathbb{Z} . Let a, b and $b, c \in \mathbb{R} \Rightarrow 2$ divides $a-b$ and 2 divides $b-c \Rightarrow a-b=2p$ and $b-c=2q$ for some $p, q \in \mathbb{Z}$. Adding the above two, we get $a-b+b-c=2p+2q \Rightarrow a-c=2(p+q)$. Here, $p+q \in \mathbb{Z} \Rightarrow 2$ divides $a-c \Rightarrow a, c \in \mathbb{R}$ for all $a, c \in \mathbb{Z}$. So, R is transitive on \mathbb{Z} .

Hence, R is an equivalence relation on \mathbb{Z} .

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.26:

Question 3:

Prove that the relation R on \mathbb{Z} defined by

$$(a, b) \in R \Leftrightarrow a - b \text{ is divisible by } 5$$

is an equivalence relation on \mathbb{Z} .

ANSWER:

We observe the following properties of relation R .

Reflexivity:

Let a be an arbitrary element of \mathbb{Z} . Then, $a-a = 0 = 0 \times 5 \Rightarrow a-a$ is divisible by $5 \Rightarrow (a, a) \in R$ for all $a \in \mathbb{Z}$. So, R is reflexive on \mathbb{Z} . Let a be an arbitrary element of \mathbb{Z} . Then, $a-a = 0 = 0 \times 5 \Rightarrow a-a$ is divisible by $5 \Rightarrow (a, a) \in R$ for all $a \in \mathbb{Z}$. So, R is reflexive on \mathbb{Z} .

Symmetry:

Let $(a, b) \in R \Rightarrow a-b$ is divisible by $5 \Rightarrow a-b = 5p$ for some $p \in \mathbb{Z} \Rightarrow b-a = 5(-p)$. Here, $-p \in \mathbb{Z}$. [Since $p \in \mathbb{Z}$] $\Rightarrow b-a$ is divisible by $5 \Rightarrow (b, a) \in R$ for all $a, b \in \mathbb{Z}$. So, R is symmetric on \mathbb{Z} . Let $(a, b) \in R \Rightarrow a-b$ is divisible by $5 \Rightarrow a-b = 5p$ for some $p \in \mathbb{Z} \Rightarrow b-a = 5(-p)$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Here, $-p \in \mathbb{Z}$ [Since $p \in \mathbb{Z}$] $\Rightarrow b-a$ is divisible by 5 $\Rightarrow b, a \in \mathbb{R}$ for all $a, b \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} .

Transitivity:

Let (a, b) and $(b, c) \in R \Rightarrow a-b$ is divisible by 5 $\Rightarrow a-b = 5p$ for some \mathbb{Z} Also, $b-c$ is divisible by 5 $\Rightarrow b-c = 5q$ for some \mathbb{Z} Adding the above two, we get $a-b+b-c = 5p+5q \Rightarrow a-c = 5(p+q) \Rightarrow a-c$ is divisible by 5 Here, $p+q \in \mathbb{Z} \Rightarrow (a, c) \in R$ for all $a, c \in \mathbb{Z}$ So, R is transitive on \mathbb{Z} . Let a, b and $b, c \in \mathbb{R} \Rightarrow a-b$ is divisible by 5 $\Rightarrow a-b = 5p$ for some \mathbb{Z} Also, $b-c$ is divisible by 5 $\Rightarrow b-c = 5q$ for some \mathbb{Z} Adding the above two, we get $a-b+b-c = 5p+5q \Rightarrow a-c = 5(p+q) \Rightarrow a-c$ is divisible by 5 Here, $p+q \in \mathbb{Z} \Rightarrow a, c \in \mathbb{R}$ for all $a, c \in \mathbb{Z}$ So, R is transitive on \mathbb{Z} .

Hence, R is an equivalence relation on \mathbb{Z} .

Question 4:

Let n be a fixed positive integer. Define a relation R on \mathbb{Z} as follows:

$(a, b) \in R \Leftrightarrow a - b$ is divisible by n .

Show that R is an equivalence relation on \mathbb{Z} .

ANSWER:

We observe the following properties of R . Then,

Reflexivity:

Let $a \in \mathbb{N}$ Here, $a-a=0=0 \times n \Rightarrow a-a$ is divisible by $n \Rightarrow (a, a) \in R \Rightarrow (a, a) \in R$ for all $a \in \mathbb{Z}$ So, R is reflexive on \mathbb{Z} . Let $a \in \mathbb{N}$ Here, $a-a=0=0 \times n \Rightarrow a-a$ is divisible by $n \Rightarrow a, a \in \mathbb{R} \Rightarrow a, a \in \mathbb{R}$ for all $a \in \mathbb{Z}$ So, R is reflexive on \mathbb{Z} .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Symmetry:

Let $(a, b) \in R$. Here, $a - b$ is divisible by $n \Rightarrow a - b = np$ for some $p \in \mathbb{Z} \Rightarrow b - a = n(-p) \Rightarrow b - a$ is divisible by n .
[$p \in \mathbb{Z} \Rightarrow -p \in \mathbb{Z}$] $\Rightarrow (b, a) \in R$. So, R is symmetric on \mathbb{Z} .
Let $a, b \in R$. Here, $a - b$ is divisible by $n \Rightarrow a - b = np$ for some $p \in \mathbb{Z} \Rightarrow b - a = n(-p) \Rightarrow b - a$ is divisible by n .
[$p \in \mathbb{Z} \Rightarrow -p \in \mathbb{Z}$] $\Rightarrow (b, a) \in R$. So, R is symmetric on \mathbb{Z} .

Transitivity:

Let (a, b) and $(b, c) \in R$. Here, $a - b$ is divisible by n and $b - c$ is divisible by n . $\Rightarrow a - b = np$ for some $p \in \mathbb{Z}$ and $b - c = nq$ for some $q \in \mathbb{Z}$. Adding the above two, we get $a - b + b - c = np + nq \Rightarrow a - c = n(p + q)$. Here, $p + q \in \mathbb{Z} \Rightarrow (a, c) \in R$ for all $a, c \in \mathbb{Z}$. So, R is transitive on \mathbb{Z} .
Let a, b and $b, c \in R$. Here, $a - b$ is divisible by n and $b - c$ is divisible by n . $\Rightarrow a - b = np$ for some $p \in \mathbb{Z}$ and $b - c = nq$ for some $q \in \mathbb{Z}$. Adding the above two, we get $a - b + b - c = np + nq \Rightarrow a - c = n(p + q)$. Here, $p + q \in \mathbb{Z} \Rightarrow (a, c) \in R$ for all $a, c \in \mathbb{Z}$. So, R is transitive on \mathbb{Z} .

Hence, R is an equivalence relation on \mathbb{Z} .

Question 5:

Let \mathbb{Z} be the set of integers. Show that the relation

$$R = \{(a, b) : a, b \in \mathbb{Z} \text{ and } a + b \text{ is even}\}$$

is an equivalence relation on \mathbb{Z} .

ANSWER:

We observe the following properties of R .

Reflexivity:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let a be an arbitrary element of Z . Then, $a \in R$ Clearly, $a+a=2a$ is even for all $a \in Z \Rightarrow (a, a) \in R$ for all $a \in Z$ So, R is reflexive on Z .
Let a be an arbitrary element of Z . Then, $a \in R$ Clearly, $a+a=2a$ is even for all $a \in Z \Rightarrow a, a \in R$ for all $a \in Z$ So, R is reflexive on Z .

Symmetry:

Let $(a, b) \in R \Rightarrow a+b$ is even $\Rightarrow b+a$ is even $\Rightarrow (b, a) \in R$ for all $a, b \in Z$ So, R is symmetric on Z .
Let $a, b \in R \Rightarrow a+b$ is even $\Rightarrow b+a$ is even $\Rightarrow b, a \in R$ for all $a, b \in Z$ So, R is symmetric on Z .

Transitivity:

Let (a, b) and $(b, c) \in R \Rightarrow a+b$ and $b+c$ are even
Now, let $a+b=2x$ for some $x \in Z$ and $b+c=2y$ for some $y \in Z$
Adding the above two, we get $a+2b+c=2x+2y \Rightarrow a+c=2(x+y-b)$, which is even for all $x, y, b \in Z$
Thus, $(a, c) \in R$ So, R is transitive on Z .
Let a, b and $b, c \in R \Rightarrow a+b$ and $b+c$ are even
Now, let $a+b=2x$ for some $x \in Z$ and $b+c=2y$ for some $y \in Z$
Adding the above two, we get $a+2b+c=2x+2y \Rightarrow a+c=2(x+y-b)$, which is even for all $x, y, b \in Z$
Thus, $a, c \in R$ So, R is transitive on Z .

Hence, R is an equivalence relation on Z .

Page No 1.26:

Question 6:

m is said to be related to n if m and n are integers and $m - n$ is divisible by 13. Does this define an equivalence relation?

ANSWER:

We observe the following properties of relation R .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let $R = \{(m, n) : m, n \in \mathbb{Z} : m - n \text{ is divisible by } 13\}$

Reflexivity: Let m be an arbitrary element of \mathbb{Z} . Then, $m \in R \Rightarrow m - m = 0 = 0 \times 13 \Rightarrow m - m$ is divisible by 13 $\Rightarrow (m, m)$ is reflexive on \mathbb{Z} .

Symmetry: Let $(m, n) \in R$. Then, $m - n$ is divisible by 13 $\Rightarrow m - n = 13p$ Here, $p \in \mathbb{Z} \Rightarrow n - m = 13(-p)$ Here, $-p \in \mathbb{Z} \Rightarrow n - m$ is divisible by 13 $\Rightarrow (n, m) \in R$ for all $m, n \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} .

Transitivity: Let (m, n) and $(n, o) \in R \Rightarrow m - n$ and $n - o$ are divisible by 13 $\Rightarrow m - n = 13p$ and $n - o = 13q$ for some $p, q \in \mathbb{Z}$ Adding the above two, we get $m - n + n - o = 13p + 13q \Rightarrow m - o = 13(p + q)$ Here, $p + q \in \mathbb{Z} \Rightarrow m - o$ is divisible by 13 $\Rightarrow (m, o) \in R$ for all $m, o \in \mathbb{Z}$ So, R is transitive on \mathbb{Z} .

Let $R = \{m, n : m, n \in \mathbb{Z} : m - n \text{ is divisible by } 13\}$

Reflexivity: Let m be an arbitrary element of \mathbb{Z} . Then, $m \in R \Rightarrow m - m = 0 = 0 \times 13 \Rightarrow m - m$ is divisible by 13 $\Rightarrow m, m$ is reflexive on \mathbb{Z} .

Symmetry: Let $m, n \in \mathbb{Z}$. Then, $m - n$ is divisible by 13 $\Rightarrow m - n = 13p$ Here, $p \in \mathbb{Z} \Rightarrow n - m = 13(-p)$ Here, $-p \in \mathbb{Z} \Rightarrow n - m$ is divisible by 13 $\Rightarrow n, m \in R$ for all $m, n \in \mathbb{Z}$ So, R is symmetric on \mathbb{Z} .

Transitivity: Let m, n and $n, o \in \mathbb{Z} \Rightarrow m - n$ and $n - o$ are divisible by 13 $\Rightarrow m - n = 13p$ and $n - o = 13q$ for some $p, q \in \mathbb{Z}$ Adding the above two, we get $m - n + n - o = 13p + 13q \Rightarrow m - o = 13(p + q)$ Here, $p + q \in \mathbb{Z} \Rightarrow m - o$ is divisible by 13 $\Rightarrow m, o \in R$ for all $m, o \in \mathbb{Z}$ So, R is transitive on \mathbb{Z} .

Hence, R is an equivalence relation on \mathbb{Z} .

Page No 1.26:

Question 7:

Let R be a relation on the set A of ordered pair of integers defined by $(x, y) R (u, v)$ if $xv = yu$. Show that R is an equivalence relation.

ANSWER:

We observe the following properties of R .

Reflexivity: Let (a, b) be an arbitrary element of the set A . Then, $(a, b) \in A \Rightarrow ab = ba \Rightarrow (a, b) R (a, b)$ Thus, R is reflexive on A .

Symmetry: Let (x, y) and $(u, v) \in A$ such that $(x, y) R (u, v)$. Then, $xv = yu \Rightarrow vx = uy \Rightarrow uy = vx \Rightarrow (u, v) R (x, y)$ So, R is symmetric on A .

Transitivity: Let $(x, y), (u, v)$ and $(p, q) \in R$ such that $(x, y) R (u, v)$ and $(u, v) R (p, q) \Rightarrow xv = yu$ and $uq = vp$ Multiplying the corresponding sides, we get $xv \times uq = yu \times vp \Rightarrow xq = yp \Rightarrow (x, y) R (p, q)$ So, R is transitive on A .

Reflexivity: Let a, b be an arbitrary

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

element of the set A . Then, $a, b \in A \Rightarrow ab = ba \Rightarrow a, b R a, b$ Thus, R is reflexive on A . Symmetry: Let x, y and $u, v \in A$ such that $x, y R u, v$. Then, $xv = yu \Rightarrow vx = uy \Rightarrow uy = vx \Rightarrow u, v R x, y$ So, R is symmetric on A . Transitivity: Let x, y, u, v and $p, q \in R$ such that $x, y R u, v$ and $u, v R p, q \Rightarrow xv = yu$ and $uq = vp$ Multiplying the corresponding sides, we get $xv \times uq = yu \times vp \Rightarrow xq = yp \Rightarrow x, y R p, q$ So, R is transitive on A .

Hence, R is an equivalence relation on A .

Question 8:

Show that the relation R on the set $A = \{x \in \mathbb{Z}; 0 \leq x \leq 12\}$, given by $R = \{(a, b) : a = b\}$, is an equivalence relation. Find the set of all elements related to 1.

ANSWER:

We observe the following properties of R .

Reflexivity: Let a be an arbitrary element of A . Then,

$a \in R \Rightarrow a = a$ [Since, every element is equal to itself] $\Rightarrow (a, a) \in R$ for all $a \in A$ So, R is reflexive on A . Symmetry: Let $(a, b) \in R \Rightarrow a = b \Rightarrow b = a \Rightarrow (b, a) \in R$ for all $a, b \in A$ So, R is symmetric on A . Transitivity: Let (a, b) and $(b, c) \in R \Rightarrow a = b$ and $b = c \Rightarrow a = b = c \Rightarrow a = c \Rightarrow (a, c) \in R$ So, R is transitive on A . $a \in R \Rightarrow a = a$ Since, every element is equal to itself $\Rightarrow a, a \in R$ for all $a \in A$ So, R is reflexive on A . Symmetry: Let $a, b \in R \Rightarrow a = b \Rightarrow b = a \Rightarrow b, a \in R$ for all $a, b \in A$ So, R is symmetric on A . Transitivity: Let a, b and $b, c \in R \Rightarrow a = b$ and $b = c \Rightarrow a = b = c \Rightarrow a = c \Rightarrow a, c \in R$ So, R is transitive on A .

Hence, R is an equivalence relation on A .

Question 9:

Let L be the set of all lines in XY -plane and R be the relation in L defined as $R = \{L_1, L_2\}$: L_1 is parallel to L_2 . Show that R is an equivalence relation. Find the set of all lines related to the line $y = 2x + 4$.

ANSWER:

We observe the following properties of R .

Reflexivity: Let L_1 be an arbitrary element of the set L . Then, $L_1 \in L \Rightarrow L_1$ is parallel to L_1 [Every line is parallel to itself] $\Rightarrow (L_1, L_1) \in R$ for all $L_1 \in L$ So, R is reflexive on L . Symmetry: Let $(L_1, L_2) \in R \Rightarrow L_1$ is parallel to $L_2 \Rightarrow L_2$ is parallel to $L_1 \Rightarrow (L_2, L_1) \in R$ for all L_1 and $L_2 \in L$ So, R is symmetric on L . Transitivity: Let (L_1, L_2) and $(L_2, L_3) \in R \Rightarrow L_1$ is parallel to L_2 and L_2 is parallel to $L_3 \Rightarrow L_1, L_2$ and L_3 are all parallel to each other $\Rightarrow L_1$ is parallel to $L_3 \Rightarrow (L_1, L_3) \in R$ So, R is transitive on L . Reflexivity: Let L_1 be an arbitrary element of the set L . Then, $L_1 \in L \Rightarrow L_1$ is parallel to L_1 Every line is parallel to itself $\Rightarrow L_1, L_1 \in R$ for all $L_1 \in L$ So, R is reflexive on L . Symmetry: Let $L_1, L_2 \in R \Rightarrow L_1$ is parallel to $L_2 \Rightarrow L_2$ is parallel to $L_1 \Rightarrow (L_2, L_1) \in R$ for all L_1 and $L_2 \in L$ So, R is symmetric on L . Transitivity: Let L_1, L_2 and $L_2, L_3 \in R \Rightarrow L_1$ is parallel to L_2 and L_2 is parallel to $L_3 \Rightarrow L_1, L_2$ and L_3 are all parallel to each other $\Rightarrow L_1$ is parallel to $L_3 \Rightarrow (L_1, L_3) \in R$ So, R is transitive on L .

Hence, R is an equivalence relation on L .

Set of all the lines related to $y = 2x + 4$

Question 10:

Show that the relation R , defined on the set A of all polygons as

$$R = \{(P_1, P_2) : P_1 \text{ and } P_2 \text{ have same number of sides}\},$$

is an equivalence relation. What is the set of all elements in A related to the right angle triangle T with sides 3, 4 and 5?

ANSWER:

We observe the following properties on R .

Reflexivity: Let P_1 be an arbitrary element of A . Then, polygon P_1 and P_1 have the same number of sides, since they are one and the same. $\Rightarrow (P_1, P_1) \in R$ for all $P_1 \in A$. So, R is reflexive on A . Symmetry: Let $(P_1, P_2) \in R \Rightarrow P_1$ and P_2 have the same number of sides. $\Rightarrow P_2$ and P_1 have the same number of sides. $\Rightarrow (P_2, P_1) \in R$ for all $P_1, P_2 \in A$. So, R is symmetric on A . Transitivity: Let $(P_1, P_2), (P_2, P_3) \in R \Rightarrow P_1$ and P_2 have the same number of sides and P_2 and P_3 have the same number of sides. $\Rightarrow P_1, P_2$ and P_3 have the same number of sides. $\Rightarrow P_1$ and P_3 have the same number of sides. $\Rightarrow (P_1, P_3) \in R$ for all $P_1, P_3 \in A$. So, R is transitive on A . Reflexivity: Let P_1 be an arbitrary element of A . Then, polygon P_1 and P_1 have the same number of sides, since they are one and the same. $\Rightarrow P_1, P_1 \in R$ for all $P_1 \in A$. So, R is reflexive on A . Symmetry: Let $P_1, P_2 \in R \Rightarrow P_1$ and P_2 have the same number of sides. $\Rightarrow P_2$ and P_1 have the same number of sides. $\Rightarrow P_2, P_1 \in R$ for all $P_1, P_2 \in A$. So, R is symmetric on A . Transitivity: Let $P_1, P_2, P_3 \in R \Rightarrow P_1$ and P_2 have the same number of sides and P_2 and P_3 have the same number of sides. $\Rightarrow P_1, P_2$ and P_3 have the same number of sides. $\Rightarrow P_1$ and P_3 have the same number of sides. $\Rightarrow P_1, P_3 \in R$ for all $P_1, P_3 \in A$. So, R is transitive on A .

Hence, R is an equivalence relation on the set A .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Also, the set of all the triangles $\in \in A$ is related to the right angle triangle T with the sides 3, 4, 5.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.27:

Question 11:

Let O be the origin. We define a relation between two points P and Q in a plane if $OP = OQ$. Show that the relation, so defined is an equivalence relation.

ANSWER:

Let A be the set of all points in a plane such that

$A = \{P : P \text{ is a point in the plane}\}$ Let R be the relation such that $R = \{(P, Q) : P, Q \in A \text{ and } OP = OQ, \text{ where } O \text{ is the origin}\}$ Let R be the relation such that $R = \{(P, Q) : P, Q \in A \text{ and } OP = OQ, \text{ where } O \text{ is the origin}\}$

We observe the following properties of R .

Reflexivity: Let P be an arbitrary element of R .

The distance of a point P will remain the same from the origin.

So, $OP = OP$

$\Rightarrow (P, P) \in R$ So, R is reflexive on A . **Symmetry:** Let $(P, Q) \in R \Rightarrow OP = OQ \Rightarrow OQ = OP \Rightarrow (Q, P) \in R$ So, R is symmetric on A . **Transitivity:** Let $(P, Q), (Q, R) \in R \Rightarrow OP = OQ$ and $OQ = OR \Rightarrow OP = OQ = OR \Rightarrow OP = OR \Rightarrow (P, R) \in R$ So, R is transitive on A . $\Rightarrow P, P \in R$ So, R is reflexive on A . **Symmetry:** Let $P, Q \in R \Rightarrow OP = OQ \Rightarrow OQ = OP \Rightarrow Q, P \in R$ So, R is symmetric on A . **Transitivity:** Let $P, Q, Q, R \in R \Rightarrow OP = OQ$ and $OQ = OR \Rightarrow OP = OQ = OR \Rightarrow OP = OR \Rightarrow P, R \in R$ So, R is transitive on A .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Hence, R is an equivalence relation on A .

Question 12:

Let R be the relation defined on the set $A = \{1, 2, 3, 4, 5, 6, 7\}$ by $R = \{(a, b) : \text{both } a \text{ and } b \text{ are either odd or even}\}$. Show that R is an equivalence relation. Further, show that all the elements of the subset $\{1, 3, 5, 7\}$ are related to each other and all the elements of the subset $\{2, 4, 6\}$ are related to each other, but no element of the subset $\{1, 3, 5, 7\}$ is related to any element of the subset $\{2, 4, 6\}$.

ANSWER:

We observe the following properties of R .

Reflexivity:

Let a be an arbitrary element of R . Then, $a \in R \Rightarrow (a, a) \in R$ for all $a \in A$. So, R is reflexive on A . Symmetry: Let $(a, b) \in R \Rightarrow$ Both a and b are either even or odd. \Rightarrow Both b and a are either even or odd. $\Rightarrow (b, a) \in R$ for all $a, b \in A$. So, R is symmetric on A . Transitivity: Let (a, b) and $(b, c) \in R \Rightarrow$ Both a and b are either even or odd and both b and c are either even or odd. $\Rightarrow a, b$ and c are either even or odd. $\Rightarrow a$ and c both are either even or odd. $\Rightarrow (a, c) \in R$ for all $a, c \in A$. So, R is transitive on A . Let a be an arbitrary element of R .

Then, $a \in R \Rightarrow a, a \in R$ for all $a \in A$. So, R is reflexive on A . Symmetry: Let $a, b \in R \Rightarrow$ Both a and b are either even or odd. \Rightarrow Both b and a are either even or odd. $\Rightarrow b, a \in R$ for all $a, b \in A$. So, R is symmetric on A . Transitivity: Let a, b and $b, c \in R \Rightarrow$ Both a and b are either even or odd and both b and c are either even or odd. $\Rightarrow a, b$ and c are either even or odd. $\Rightarrow a$ and c both are either even or odd. $\Rightarrow a, c \in R$ for all $a, c \in A$. So, R is transitive on A .

Thus, R is an equivalence relation on A .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

We observe that all the elements of the subset $\{1, 3, 5, 7\}$ are odd. Thus, they are related to each other.

This is because the relation R on A is an equivalence relation.

Similarly, the elements of the subset $\{2, 4, 6\}$ are even. Thus, they are related to each other because every element is even.

Hence proved.

Page No 1.27:

Question 13:

Let S be a relation on the set R of all real numbers defined by

$$S = \{(a, b) \in R \times R : a^2 + b^2 = 1\}$$

Prove that S is not an equivalence relation on R .

ANSWER:

We observe the following properties of S .

Reflexivity: Let a be an arbitrary element of R . Then, $a \in R \Rightarrow a^2 + a^2 \neq 1 \forall a \in R \Rightarrow (a, a) \notin S$. So, S is not reflexive on R .
Symmetry: Let $(a, b) \in R \Rightarrow a^2 + b^2 = 1 \Rightarrow b^2 + a^2 = 1 \Rightarrow (b, a) \in S$ for all $a, b \in R$. So, S is symmetric on R .
Transitivity: Let (a, b) and $(b, c) \in S \Rightarrow a^2 + b^2 = 1$ and $b^2 + c^2 = 1$. Adding the above two, we get $a^2 + c^2 = 2 - 2b^2 \neq 1$ for all $a, b, c \in R$. So, S is not transitive on R .
Reflexivity: Let a be an arbitrary element of R . Then, $a \in R \Rightarrow a^2 + a^2 \neq 1 \forall a \in R \Rightarrow (a, a) \notin S$. So, S is not reflexive on R .
Symmetry: Let $(a, b) \in R \Rightarrow a^2 + b^2 = 1 \Rightarrow b^2 + a^2 = 1 \Rightarrow (b, a) \in S$ for all $a, b \in R$. So, S is symmetric on R .
Transitivity:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let a, b and $b, c \in S \Rightarrow a^2 + b^2 = 1$ and $b^2 + c^2 = 1$. Adding the above two, we get $a^2 + c^2 = 2 - 2b^2 \neq 1$ for all $a, b, c \in \mathbb{R}$. So, S is not transitive on \mathbb{R} .

Hence, S is not an equivalence relation on \mathbb{R} .

Page No 1.27:

Question 14:

Let Z be the set of all integers and Z_0 be the set of all non-zero integers. Let a relation R on $Z \times Z_0$ be defined as

$$(a, b) R (c, d) \Leftrightarrow ad = bc \text{ for all } (a, b), (c, d) \in Z \times Z_0,$$

Prove that R is an equivalence relation on $Z \times Z_0$.

ANSWER:

We observe the following properties of R .

Reflexivity:

Let (a, b) be an arbitrary element of $Z \times Z_0$. Then, $(a, b) \in Z \times Z_0 \Rightarrow a, b \in Z, Z_0 \Rightarrow ab = ba \Rightarrow (a, b) \in R$ for all $(a, b) \in Z \times Z_0$. So, R is reflexive on $Z \times Z_0$. Let a, b be an arbitrary element of $Z \times Z_0$. Then, $a, b \in Z \times Z_0 \Rightarrow a, b \in Z, Z_0 \Rightarrow ab = ba \Rightarrow a, b \in R$ for all $a, b \in Z \times Z_0$. So, R is reflexive on $Z \times Z_0$.

Symmetry:

Let $(a, b), (c, d) \in Z \times Z_0$ such that $(a, b) R (c, d)$. Then, $(a, b) R (c, d) \Rightarrow ad = bc \Rightarrow cb = da \Rightarrow (c, d) R (a, b)$. Thus, $(a, b) R (c, d) \Rightarrow (c, d) R (a, b)$ for all $(a, b), (c, d) \in Z \times Z_0$. So, R is symmetric on $Z \times Z_0$. Let $a, b, c, d \in Z \times Z_0$ such that $a, b R c, d$. Then, $a, b R c, d \Rightarrow ad = bc \Rightarrow cb = da \Rightarrow c, d R a, b$. Thus, $a, b R c, d \Rightarrow c, d R a, b$ for all $a, b, c, d \in Z \times Z_0$. So, R is symmetric on $Z \times Z_0$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Transitivity:

Let $(a, b), (c, d), (e, f) \in N \times N_0$ such that $(a, b) R (c, d)$ and $(c, d) R (e, f)$. Then, $(a, b) R (c, d) \Rightarrow ad = bc$ and $(c, d) R (e, f) \Rightarrow cf = de \Rightarrow (ad)(cf) = (bc)(de) \Rightarrow af = be \Rightarrow (a, b) R (e, f)$. Thus, $(a, b) R (c, d)$ and $(c, d) R (e, f) \Rightarrow (a, b) R (e, f)$ for all values $(a, b), (c, d), (e, f) \in N \times N_0$. So, R is transitive on $N \times N_0$.

Let $a, b, c, d, e, f \in N \times N_0$ such that $a, b R c, d$ and $c, d R e, f$. Then, $a, b R c, d \Rightarrow ad = bc$ and $c, d R e, f \Rightarrow cf = de \Rightarrow ad \cdot cf = bc \cdot de \Rightarrow af = be \Rightarrow a, b R e, f$. Thus, $a, b R c, d$ and $c, d R e, f \Rightarrow a, b R e, f$ for all values $a, b, c, d, e, f \in N \times N_0$. So, R is transitive on $N \times N_0$.

Question 15:

If R and S are relations on a set A , then prove that

- (i) R and S are symmetric $\Rightarrow R \cap S$ and $R \cup S$ are symmetric
- (ii) R is reflexive and S is any relation $\Rightarrow R \cup S$ is reflexive.

ANSWER:

(i) R and S are symmetric relations on the set A .

$\Rightarrow R \subset A \times A$ and $S \subset A \times A \Rightarrow R \cap S \subset A \times A$. Thus, $R \cap S$ is a relation on A . Let $a, b \in A$ such that $(a, b) \in R \cap S$. Then, $(a, b) \in R \cap S \Rightarrow (a, b) \in R$ and $(a, b) \in S \Rightarrow (b, a) \in R$ and $(b, a) \in S$ [Since R and S are symmetric] $\Rightarrow (b, a) \in R \cap S$. Thus, $(a, b) \in R \cap S \Rightarrow (b, a) \in R \cap S$ for all $a, b \in A$. So, $R \cap S$ is symmetric on A .

$\Rightarrow R \subset A \times A$ and $S \subset A \times A \Rightarrow R \cup S \subset A \times A$. Thus, $R \cup S$ is a relation on A . Let $a, b \in A$ such that $(a, b) \in R \cup S$. Then, $(a, b) \in R \cup S \Rightarrow a, b \in R$ or $a, b \in S \Rightarrow b, a \in R$ or $b, a \in S$. Since R and S are symmetric $\Rightarrow b, a \in R \cup S$. Thus, $(a, b) \in R \cup S \Rightarrow b, a \in R \cup S$ for all $a, b \in A$. So, $R \cup S$ is symmetric on A .

Also,

Let $a, b \in A$ such that $(a, b) \in R \cup S \Rightarrow (a, b) \in R$ or $(a, b) \in S \Rightarrow (b, a) \in R$ or $(b, a) \in S$ [Since R and S are symmetric] $\Rightarrow (b, a) \in R \cup S$. So, $R \cup S$ is symmetric on A . Let $a, b \in A$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

such that $a, b \in R \cup S \Rightarrow a, b \in R$ or $a, b \in S \Rightarrow b, a \in R$ or $b, a \in S$ Since R and S are symmetric $\Rightarrow b, a \in R \cup S$ So, $R \cup S$ is symmetric on A .

(ii) R is reflexive and S is any relation.

Suppose $a \in A$. Then, $(a, a) \in R$ [Since R is reflexive] $\Rightarrow (a, a) \in R \cup S \Rightarrow R \cup S$ is reflexive on A .
 Suppose $a \in A$. Then, $(a, a) \in R$
 Since R is reflexive $\Rightarrow (a, a) \in R \cup S \Rightarrow R \cup S$ is reflexive on A .

Page No 1.27:

Question 16:

If R and S are transitive relations on a set A , then prove that $R \cup S$ may not be a transitive relation on A .

ANSWER:

Let $A = \{a, b, c\}$ and R and S be two relations on A , given by

$R = \{(a, a), (a, b), (b, a), (b, b)\}$ and

$S = \{(b, b), (b, c), (c, b), (c, c)\}$

Here, the relations R and S are transitive on A .

$(a, b) \in R \cup S$ and $(b, c) \in R \cup S$ But $(a, c) \notin R \cup S$
 $a, b \in R \cup S$ and $b, c \in R \cup S$ But $a, c \notin R \cup S$

Hence, $R \cup S$ is not a transitive relation on A .

Page No 1.27:

Question 17:

Let C be the set of all complex numbers and C_0 be the set of all non-zero complex numbers. Let a relation R on C_0 be defined as

$$z_1 z_1 R z_2 \Leftrightarrow z_1 - z_2 z_1 + z_2 z_2 \Leftrightarrow z_1 - z_2 z_1 + z_2 \text{ is real for all } z_1, z_2 \in C_0.$$

Show that R is an equivalence relation.

ANSWER:

(i) Test for reflexivity:

Since, $z_1 - z_1 z_1 + z_1 = 0 z_1 - z_1 z_1 + z_1 = 0$, which is a real number.

So, $(z_1, z_1) \in R, z_1 \in C_0$

Hence, R is reflexive relation.

(ii) Test for symmetric:

Let $(z_1, z_2) \in R, z_1, z_2 \in C_0$.

Then, $z_1 - z_2 z_1 + z_2 = x z_1 - z_2 z_1 + z_2 = x$, where x is real

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$\Rightarrow -(z_1 - z_2z_1 + z_2) = -x \Rightarrow (z_2 - z_1z_2 + z_1) = -x$, is also a real number
 $\Rightarrow -z_1 - z_2z_1 + z_2 = -x \Rightarrow z_2 - z_1z_2 + z_1 = -x$, is also a real number

So, $(z_2, z_1) \in R, z_1 \in R$

Hence, R is symmetric relation.

(iii) Test for transitivity:

Let $(z_1, z_2) \in R$ and $(z_2, z_3) \in R, z_1, z_2 \in R$ and $z_2, z_3 \in R$.

Then,

$z_1 - z_2z_1 + z_2 = x$, where x is a real number.
 $\Rightarrow z_1 - z_2 = xz_1 + xz_2 \Rightarrow z_1 - xz_1 = z_2 + xz_2 \Rightarrow z_1(1-x) = z_2(1+x) \Rightarrow z_1z_2 = (1+x)(1-x)$
 ...(1) $z_1 - z_2z_1 + z_2 = x$, where x is a real number.
 $\Rightarrow z_1 - z_2 = xz_1 + xz_2 \Rightarrow z_1 - xz_1 = z_2 + xz_2 \Rightarrow z_1(1-x) = z_2(1+x) \Rightarrow z_1z_2 = 1+x(1-x)$...1

Also,

$z_2 - z_3z_2 + z_3 = y$, where y is a real number.
 $\Rightarrow z_2 - z_3 = yz_2 + yz_3 \Rightarrow z_2 - yz_2 = z_3 + yz_3 \Rightarrow z_2(1-y) = z_3(1+y) \Rightarrow z_2z_3 = (1+y)(1-y)$
 ...(2) $z_2 - z_3z_2 + z_3 = y$, where y is a real number.
 $\Rightarrow z_2 - z_3 = yz_2 + yz_3 \Rightarrow z_2 - yz_2 = z_3 + yz_3 \Rightarrow z_2(1-y) = z_3(1+y) \Rightarrow z_2z_3 = 1+y(1-y)$...2

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Dividing (1) and (2), we get

$z_1 z_3 = (1+x_1-x)(1-y_1+y) = z$, where z is a real number. $\Rightarrow z_1 - z_3 z_1 + z_3 = z - 1z + 1$, which is real $\Rightarrow (z_1, z_3) \in R$
 $z_1 z_3 = 1+x_1-x \times 1-y_1+y = z$, where z is a real number. $\Rightarrow z_1 - z_3 z_1 + z_3 = z - 1z + 1$, which is real $\Rightarrow z_1, z_3 \in R$

Hence, R is transitive relation.

From (i), (ii), and (iii),

R is an equivalence relation.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.29:

Question 1:

Let R be a relation on the set N given by

$R = \{(a, b) : a = b - 2, b > 6\}$. Then,

(a) $(2, 4) \in R$

(b) $(3, 8) \in R$

(c) $(6, 8) \in R$

(d) $(8, 7) \in R$

ANSWER:

(c) $(6, 8) \in R$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$(6, 8) \in R$ Then, $a=b-2 \Rightarrow 6=8-2$ and $b=8 > 6$ Hence, $(6, 8) \in R$
 $6, 8 \in R$ Then, $a=b-2 \Rightarrow 6=8-2$ and $b=8 > 6$ Hence, $6, 8 \in R$

Page No 1.29:

Question 2:

If a relation R is defined on the set Z of integers as follows:

$(a, b) \in R \Leftrightarrow a^2 + b^2 = 25$. Then, domain (R) is

- (a) $\{3, 4, 5\}$
- (b) $\{0, 3, 4, 5\}$
- (c) $\{0, \pm 3, \pm 4, \pm 5\}$
- (d) none of these

ANSWER:

- (c) $\{0, \pm 3, \pm 4, \pm 5\}$

$R = \{(a, b) : a^2 + b^2 = 25, a, b \in Z\} \Rightarrow a \in \{-5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5\}$ and
 $b \in \{-5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5\}$ $R = \{a, b : a^2 + b^2 = 25, a, b \in Z \Rightarrow a \in \{-5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5\}$ and $b \in \{-5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5\}$

So, domain $(R) = \{0, \pm 3, \pm 4, \pm 5\}$ So, domain $(R) = 0, \pm 3, \pm 4, \pm 5$

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.30:

Question 3:

R is a relation on the set Z of integers and it is given by

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$(x, y) \in R \Leftrightarrow |x - y| \leq 1$. Then, R is

- (a) reflexive and transitive
- (b) reflexive and symmetric
- (c) symmetric and transitive
- (d) an equivalence relation

ANSWER:

- (b) reflexive and symmetric

Reflexivity: Let $x \in \mathbb{R}$. Then, $x - x = 0 < 1 \Rightarrow |x - x| \leq 1 \Rightarrow (x, x) \in R$ for all $x \in \mathbb{Z}$. So, R is reflexive on \mathbb{Z} .

Symmetry: Let $(x, y) \in R$. Then, $|x - y| \leq 1 \Rightarrow |-(y - x)| \leq 1 \Rightarrow |y - x| \leq 1$ [Since

$|x - y| = |y - x| \Rightarrow (y, x) \in R$ for all $x, y \in \mathbb{Z}$. So, R is symmetric on \mathbb{Z} .

Transitivity: Let $(x, y) \in R$ and $(y, z) \in R$. Then, $|x - y| \leq 1$ and $|y - z| \leq 1 \Rightarrow$ It is not always true that $|x - z| \leq 1$. $\Rightarrow (x,$

$z) \notin R$. So, R is not transitive on \mathbb{Z} .

Reflexivity: Let $x \in \mathbb{R}$. Then, $x - x = 0 < 1 \Rightarrow x - x \leq 1 \Rightarrow x, x \in \mathbb{R}$ for all $x \in \mathbb{Z}$. So, R is reflexive on \mathbb{Z} .

Symmetry: Let $x, y \in \mathbb{R}$. Then, $x - y \leq 1 \Rightarrow -(y - x) \leq 1 \Rightarrow y - x \leq 1$ Since $x - y = y - x \Rightarrow y, x \in \mathbb{R}$ for all $x, y \in \mathbb{Z}$. So, R is symmetric on \mathbb{Z} .

Transitivity: Let $x, y \in \mathbb{R}$ and $y, z \in \mathbb{R}$. Then, $x - y \leq 1$ and $y - z \leq 1 \Rightarrow$ It is not always true that $x - z \leq 1$. $\Rightarrow x, z \notin R$. So, R is not transitive on \mathbb{Z} .

Page No 1.30:

Question 4:

The relation R defined on the set $A = \{1, 2, 3, 4, 5\}$ by

$R = \{(a, b) : |a^2 - b^2| < 16\}$ is given by

- (a) $\{(1, 1), (2, 1), (3, 1), (4, 1), (2, 3)\}$
- (b) $\{(2, 2), (3, 2), (4, 2), (2, 4)\}$
- (c) $\{(3, 3), (4, 3), (5, 4), (3, 4)\}$
- (d) none of these

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

ANSWER:

(d) none of these

R is given by $\{(1, 2), (2, 1), (2, 3), (3, 2), (3, 4), (4, 3), (4, 5), (5, 4), (1, 3), (3, 1), (1, 4), (4, 1), (2, 4), (4, 2)\}$, which is not mentioned in (a), (b) or (c).

Page No 1.30:

Question 5:

Let R be the relation over the set of all straight lines in a plane such that $l_1 R l_2 \Leftrightarrow l_1 \perp l_2$. Then, R is

- (a) symmetric
- (b) reflexive
- (c) transitive
- (d) an equivalence relation

ANSWER:

(a) symmetric

A = Set of all straight lines in the plane

$R = \{(l_1, l_2) : l_1, l_2 \in A : l_1 \perp l_2\}$
Reflexivity: l_1 is not $\perp l_1 \Rightarrow (l_1, l_1) \notin R$ So, R is not reflexive on A .
Symmetry: Let $(l_1, l_2) \in R \Rightarrow l_1 \perp l_2 \Rightarrow l_2 \perp l_1 \Rightarrow (l_2, l_1) \in R$ So, R is symmetric on A .
Transitivity: Let $(l_1, l_2) \in R, (l_2, l_3) \in R \Rightarrow l_1 \perp l_2$ and $l_2 \perp l_3$ But l_1 is not $\perp l_3 \Rightarrow (l_1, l_3) \notin R$ So, R is not transitive on A .
 $R = \{(l_1, l_2) : l_1, l_2 \in A : l_1 \perp l_2\}$
Reflexivity: l_1 is not $\perp l_1 \Rightarrow (l_1, l_1) \notin R$ So, R is not reflexive on A .
Symmetry: Let $l_1, l_2 \in R \Rightarrow l_1 \perp l_2 \Rightarrow l_2 \perp l_1 \Rightarrow (l_2, l_1) \in R$ So, R is symmetric on A .
Transitivity: Let $l_1, l_2 \in R, l_2, l_3 \in R \Rightarrow l_1 \perp l_2$ and $l_2 \perp l_3$ But l_1 is not $\perp l_3 \Rightarrow (l_1, l_3) \notin R$ So, R is not transitive on A .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Page No 1.30:

Question 6:

If $A = \{a, b, c\}$, then the relation $R = \{(b, c)\}$ on A is

- (a) reflexive only
- (b) symmetric only
- (c) transitive only
- (d) reflexive and transitive only

ANSWER:

- (c) transitive only

The relation $R = \{(b,c)\}$ is neither reflexive nor symmetric because every element of A is not related to itself. Also, the ordered pair of R obtained by interchanging its elements is not contained in R .

We observe that R is transitive on A because there is only one pair.

Page No 1.30:

Question 7:

Let $A = \{2, 3, 4, 5, \dots, 17, 18\}$. Let ' \approx ' be the equivalence relation on $A \times A$, cartesian product of A with itself, defined by $(a, b) \approx (c, d)$ if $ad = bc$. Then, the number of ordered pairs of the equivalence class of $(3, 2)$ is

- (a) 4
- (b) 5
- (c) 6

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(d) 7

ANSWER:

(c) 6

The ordered pairs of the equivalence class of $(3, 2)$ are $\{(3, 2), (6, 4), (9, 6), (12, 8), (15, 10), (18, 12)\}$.

We observe that these are 6 pairs.

RD Sharma 12th Maths Chapter 1, Class 12 Maths Chapter 1 solutions

Page No 1.30:

Question 8:

Let $A = \{1, 2, 3\}$. Then, the number of relations containing $(1, 2)$ and $(1, 3)$ which are reflexive and symmetric but not transitive is

(a) 1

(b) 2

(c) 3

(d) 4

ANSWER:

(a) 1

The required relation is R .

$$R = \{(1, 2), (1, 3), (1, 1), (2, 2), (3, 3), (2, 1), (3, 1)\}$$

Hence, there is only 1 such relation that is reflexive and symmetric, but not transitive.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Page No 1.30:

Question 9:

The relation ' R ' in $N \times N$ such that

$(a, b) R (c, d) \Leftrightarrow a + d = b + c$ is

- (a) reflexive but not symmetric
- (b) reflexive and transitive but not symmetric
- (c) an equivalence relation
- (d) none of the these

ANSWER:

(c) an equivalence relation

We observe the following properties of relation R .

Reflexivity: Let $(a, b) \in N \times N \Rightarrow a, b \in N \Rightarrow a + b = b + a \Rightarrow (a, b) \in R$ So, R is reflexive on $N \times N$. Symmetry: Let $(a, b), (c, d) \in N \times N$ such that $(a, b) R (c, d) \Rightarrow a + d = b + c \Rightarrow d + a = c + b \Rightarrow (d, c), (b, a) \in R$ So, R is symmetric on $N \times N$. Transitivity: Let $(a, b), (c, d), (e, f) \in N \times N$ such that $(a, b) R (c, d)$ and $(c, d) R (e, f) \Rightarrow a + d = b + c$ and $c + f = d + e \Rightarrow a + d + c + f = b + c + d + e \Rightarrow a + f = b + e \Rightarrow (a, b) R (e, f)$ So, R is transitive on $N \times N$. Reflexivity: Let $(a, b) \in N \times N \Rightarrow a, b \in N \Rightarrow a + b = b + a \Rightarrow (a, b) \in R$ So, R is reflexive on $N \times N$. Symmetry: Let $a, b, c, d \in N \times N$ such that $a, b R c, d \Rightarrow a + d = b + c \Rightarrow d + a = c + b \Rightarrow (d, c), (b, a) \in R$ So, R is symmetric on $N \times N$. Transitivity: Let $a, b, c, d, e, f \in N \times N$ such that $a, b R c, d$ and $c, d R e, f \Rightarrow a + d = b + c$ and $c + f = d + e \Rightarrow a + d + c + f = b + c + d + e \Rightarrow a + f = b + e \Rightarrow (a, b) R (e, f)$ So, R is transitive on $N \times N$.

Hence, R is an equivalence relation on N .

Page No 1.30:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Question 10:

If $A = \{1, 2, 3\}$, $B = \{1, 4, 6, 9\}$ and R is a relation from A to B defined by 'x is greater than y'. The range of R is

- (a) $\{1, 4, 6, 9\}$
- (b) $\{4, 6, 9\}$
- (c) $\{1\}$
- (d) none of these

ANSWER:

- (c) $\{1\}$

Here,

$R = \{(x, y) : x \in A \text{ and } y \in B : x > y\} \Rightarrow R = \{(2, 1), (3, 1)\}$
 $R = \{x, y : x \in A \text{ and } y \in B : x > y\} \Rightarrow R = \{2, 1, 3, 1\}$

Thus,

Range of $R = \{1\}$

Page No 1.30:**Question 11:**

A relation R is defined from $\{2, 3, 4, 5\}$ to $\{3, 6, 7, 10\}$ by : $x R y \Leftrightarrow x$ is relatively prime to y . Then, domain of R is

- (a) $\{2, 3, 5\}$
- (b) $\{3, 5\}$
- (c) $\{2, 3, 4\}$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(d) {2, 3, 4, 5}

ANSWER:

(d) {2, 3, 4, 5}

The relation R is defined as

$R = \{(x, y) : x \in \{2, 3, 4, 5\}, y \in \{3, 6, 7, 10\} : x \text{ is relatively prime to } y\} \Rightarrow R = \{(2, 3), (2, 7), (3, 7), (3, 10), (4, 7), (5, 3), (5, 7)\}$ $R = x, y : x \in \{2, 3, 4, 5\}, y \in \{3, 6, 7, 10\} : x \text{ is relatively prime to } y \Rightarrow R = \{2, 3, 2, 7, 3, 7, 3, 10, 4, 7, 5, 3, 5, 7\}$

Hence, the domain of R includes all the values of x , i.e. {2, 3, 4, 5}.

Page No 1.30:

Question 12:

A relation ϕ from C to R is defined by $x \phi y \Leftrightarrow |x| = y$. Which one is correct?

(a) $(2 + 3i) \phi 13$

(b) $3 \phi (-3)$

(c) $(1 + i) \phi 2$

(d) $i \phi 1$

ANSWER:

(d) $i \phi 1$

$\because |2+3i|=13 \neq \sqrt{13}$ $|3| \neq -3$ $|1+i| = \sqrt{2} \neq 2$ and $|i| = 1$ So, $(i, 1) \in \phi$. $\therefore 2+3i=13 \neq 13$
 $3 \neq -3$ $1+i = \sqrt{2} \neq 2$ and $i = 1$ So, $i, 1 \in \phi$

Page No 1.30:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Question 13:

Let R be a relation on N defined by $x + 2y = 8$. The domain of R is

- (a) {2, 4, 8}
- (b) {2, 4, 6, 8}
- (c) {2, 4, 6}
- (d) {1, 2, 3, 4}

ANSWER:

- (c) {2,4,6}

The relation R is defined as

$$R = \{(x, y) : x, y \in N \text{ and } x + 2y = 8\} \Rightarrow R = \{(x, y) : x, y \in N \text{ and } y = (8-x)/2\} \quad R = \{(x, y) : x, y \in N \text{ and } x + 2y = 8\} \Rightarrow R = \{(x, y) : x, y \in N \text{ and } y = 8 - x/2\}$$

Domain of R is all values of $x \in N$ satisfying the relation R . Also, there are only three values of x that result in y , which is a natural number. These are {2, 4, 6}.

Page No 1.30:**Question 14:**

R is a relation from {11, 12, 13} to {8, 10, 12} defined by $y = x - 3$. Then, R^{-1} is

- (a) {(8, 11), (10, 13)}
- (b) {(11, 8), (13, 10)}
- (c) {(10, 13), (8, 11)}
- (d) none of these

ANSWER:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(a) $\{(8, 11), (10, 13)\}$

The relation R is defined by

$R = \{(x, y) : x \in \{11, 12, 13\}, y \in \{8, 10, 12\} : y = x - 3\} \Rightarrow R = \{(11, 8), (13, 10)\}$ So,
 $R^{-1} = \{(8, 11), (10, 13)\}$ $R = \{x, y : x \in \{11, 12, 13\}, y \in \{8, 10, 12\} : y = x - 3\} \Rightarrow R = \{(11, 8), (13, 10)\}$ So, $R^{-1} = \{(8, 11), (10, 13)\}$

Page No 1.30:

Question 15:

Let $R = \{(a, a), (b, b), (c, c), (a, b)\}$ be a relation on set $A = \{a, b, c\}$. Then, R is

- (a) identify relation
- (b) reflexive
- (c) symmetric
- (d) antisymmetric

ANSWER:

- (b) reflexive

Reflexivity: Since $(a, a) \in R \forall a \in A$, R is reflexive on A . Symmetry: Since $(a, b) \in R$ but $(b, a) \notin R$, R is not symmetric on A . $\Rightarrow R$ is not antisymmetric on A . Also, R is not an identity relation on A . Reflexivity: Since $(a, a) \in R \forall a \in A$, R is reflexive on A . Symmetry: Since $(a, b) \in R$ but $(b, a) \notin R$, R is not symmetric on A . $\Rightarrow R$ is not antisymmetric on A . Also, R is not an identity relation on A .

Page No 1.30:

Question 16:

Let $A = \{1, 2, 3\}$ and $B = \{(1, 2), (2, 3), (1, 3)\}$ be a relation on A . Then, R is

- (a) neither reflexive nor transitive

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(b) neither symmetric nor transitive

(c) transitive

(d) none of these

ANSWER:

(c) transitive

Reflexivity: Since $(1, 1) \notin B$, B is not reflexive on A . Symmetry: Since $(1, 2) \in B$ but $(2, 1) \notin B$, B is not symmetric on A . Transitivity: Since $(1, 2) \in B$, $(2, 3) \in B$ and $(1, 3) \in B$, B is transitive on A . Reflexivity: Since $(1, 1) \notin B$, B is not reflexive on A . Symmetry: Since $1, 2 \in B$ but $2, 1 \notin B$, B is not symmetric on A . Transitivity: Since $1, 2 \in B$, $2, 3 \in B$ and $1, 3 \in B$, B is transitive on A .

Page No 1.30:

Question 17:

If R is the largest equivalence relation on a set A and S is any relation on A , then

(a) $R \subset S$

(b) $S \subset R$

(c) $R = S$

(d) none of these

ANSWER:

(b) $S \subset R$

Since R is the largest equivalence relation on set A ,

$$R \subseteq A \times A \subseteq A \times A$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Since S is any relation on A ,

$$S \subset A \times A \quad S \subset A \times A$$

So, $S \subset R$

Page No 1.30:

Question 18:

If R is a relation on the set $A = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$ given by $x R y \Leftrightarrow y = 3x$, then R =

(a) $\{(3, 1), (6, 2), (8, 2), (9, 3)\}$

(b) $\{(3, 1), (6, 2), (9, 3)\}$

(c) $\{(3, 1), (2, 6), (3, 9)\}$

(d) none of these

ANSWER:

(d) none of these

The relation R is defined as

$$R = \{(x, y) : x, y \in A : y = 3x\} \Rightarrow R = \{(1, 3), (2, 6), (3, 9)\} \quad R = x, y : x, y \in A : y = 3x \Rightarrow R = 1, 3, 2, 6, 3, 9$$

Page No 1.31:

Question 19:

If R is a relation on the set $A = \{1, 2, 3\}$ given by $R = \{(1, 1), (2, 2), (3, 3)\}$, then R is

(a) reflexive

(b) symmetric

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(c) transitive

(d) all the three options

ANSWER:

(d) all the three options

$R = \{(a, b) : a = b \text{ and } a, b \in A\}$
Reflexivity: Let $a \in A$. Then, $a = a \Rightarrow (a, a) \in R$ for all $a \in A$. So, R is reflexive on A .
Symmetry: Let $a, b \in A$ such that $(a, b) \in R$. Then, $(a, b) \in R \Rightarrow a = b \Rightarrow b = a \Rightarrow (b, a) \in R$ for all $a, b \in A$. So, R is symmetric on A .
Transitivity: Let $a, b, c \in A$ such that $(a, b) \in R$ and $(b, c) \in R$. Then, $(a, b) \in R \Rightarrow a = b$ and $(b, c) \in R \Rightarrow b = c \Rightarrow a = c \Rightarrow (a, c) \in R$ for all $a, b, c \in A$. So, R is transitive on A .
 $R = \{(a, b) : a = b \text{ and } a, b \in A\}$
Reflexivity: Let $a \in A$. Then, $a = a \Rightarrow (a, a) \in R$ for all $a \in A$. So, R is reflexive on A .
Symmetry: Let $a, b \in A$ such that $(a, b) \in R$. Then, $(a, b) \in R \Rightarrow a = b \Rightarrow b = a \Rightarrow (b, a) \in R$ for all $a, b \in A$. So, R is symmetric on A .
Transitivity: Let $a, b, c \in A$ such that $(a, b) \in R$ and $(b, c) \in R$. Then, $(a, b) \in R \Rightarrow a = b$ and $(b, c) \in R \Rightarrow b = c \Rightarrow a = c \Rightarrow (a, c) \in R$ for all $a, b, c \in A$. So, R is transitive on A .

Hence, R is an equivalence relation on A .

Page No 1.31:

Question 20:

If $A = \{a, b, c, d\}$, then a relation $R = \{(a, b), (b, a), (a, a)\}$ on A is

(a) symmetric and transitive only

(b) reflexive and transitive only

(c) symmetric only

(d) transitive only

ANSWER:

(a) symmetric and transitive only

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Reflexivity: Since $(b, b) \notin R$, R is not reflexive on A . Symmetry: Since $(a, b) \in R$ and $(b, a) \in R$, R is symmetric on A . Transitivity: Since $(a, b) \in R$, $(b, a) \in R$ and $(a, a) \in R$, R is transitive on A . Reflexivity: Since $b, b \notin R$, R is not reflexive on A . Symmetry: Since $a, b \in R$ and $b, a \in R$, R is symmetric on A . Transitivity: Since $a, b \in R$, $b, a \in R$ and $a, a \in R$, R is transitive on A .

Page No 1.31:

Question 21:

If $A = \{1, 2, 3\}$, then a relation $R = \{(2, 3)\}$ on A is

- (a) symmetric and transitive only
- (b) symmetric only
- (c) transitive only
- (d) none of these

ANSWER:

- (c) transitive only

The relation R is not reflexive because every element of A is not related to itself. Also, R is not symmetric since on interchanging the elements, the ordered pair in R is not contained in it.

R is transitive by default because there is only one element in it.

Page No 1.31:

Question 22:

Let R be the relation on the set $A = \{1, 2, 3, 4\}$ given by

$R = \{(1, 2), (2, 2), (1, 1), (4, 4), (1, 3), (3, 3), (3, 2)\}$. Then,

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

- (a) R is reflexive and symmetric but not transitive
- (b) R is reflexive and transitive but not symmetric
- (c) R is symmetric and transitive but not reflexive
- (d) R is an equivalence relation

ANSWER:

- (b) R is reflexive and transitive but not symmetric.

Reflexivity: Clearly, $(a, a) \in R \forall a \in A$ So, R is reflexive on A . Symmetry: Since $(1, 2) \in R$, but $(2, 1) \notin R$, R is not symmetric on A . Transitivity: Since, $(1, 3), (3, 2) \in R$ and $(1, 2) \in R$, R is transitive on A . Reflexivity: Clearly, $(a, a) \in R \forall a \in A$ So, R is reflexive on A . Symmetry: Since $1, 2 \in R$, but $2, 1 \notin R$, R is not symmetric on A . Transitivity: Since, $1, 3, 3, 2 \in R$ and $1, 2 \in R$, R is transitive on A .

Page No 1.31:

Question 23:

Let $A = \{1, 2, 3\}$. Then, the number of equivalence relations containing $(1, 2)$ is

- (a) 1
- (b) 2
- (c) 3
- (d) 4

ANSWER:

- (b) 2

There are 2 equivalence relations containing $\{1, 2\}$.

$$R = \{(1, 2)\}$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$S = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (2, 3), (3, 2), (1, 3), (3, 1)\}$

Page No 1.31:

Question 24:

The relation $R = \{(1, 1), (2, 2), (3, 3)\}$ on the set $\{1, 2, 3\}$ is

- (a) symmetric only
- (b) reflexive only
- (c) an equivalence relation
- (d) transitive only

ANSWER:

- (c) an equivalence relation

$R = \{(a, b) : a = b \text{ and } a, b \in A\}$
Reflexivity: Let $a \in A$. Here, $a = a \Rightarrow (a, a) \in R$ for all $a \in A$. So, R is reflexive on A .
Symmetry: Let $a, b \in A$ such that $(a, b) \in R$. Then, $(a, b) \in R \Rightarrow a = b \Rightarrow b = a \Rightarrow (b, a) \in R$ for all $a, b \in A$. So, R is symmetric on A .
Transitive: Let $a, b, c \in A$ such that $(a, b) \in R$ and $(b, c) \in R$. Then, $(a, b) \in R \Rightarrow a = b$ and $(b, c) \in R \Rightarrow b = c \Rightarrow a = c \Rightarrow (a, c) \in R$ for all $a, b, c \in A$. So, R is transitive on A .
 $R = \{a, b : a = b \text{ and } a, b \in A\}$
Reflexivity: Let $a \in A$. Here, $a = a \Rightarrow a, a \in R$ for all $a \in A$. So, R is reflexive on A .
Symmetry: Let $a, b \in A$ such that $a, b \in R$. Then, $a, b \in R \Rightarrow a = b \Rightarrow b = a \Rightarrow b, a \in R$ for all $a, b \in A$. So, R is symmetric on A .
Transitive: Let $a, b, c \in A$ such that $a, b \in R$ and $b, c \in R$. Then, $a, b \in R \Rightarrow a = b$ and $b, c \in R \Rightarrow b = c \Rightarrow a = c \Rightarrow a, c \in R$ for all $a, b, c \in A$. So, R is transitive on A .

Hence, R is an equivalence relation on A .

Page No 1.31:

Question 25:

S is a relation over the set R of all real numbers and it is given by

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$(a, b) \in S \Leftrightarrow ab \geq 0$. Then, S is

- (a) symmetric and transitive only
- (b) reflexive and symmetric only
- (c) antisymmetric relation
- (d) an equivalence relation

ANSWER:

- (d) an equivalence relation

Reflexivity: Let $a \in \mathbb{R}$

Then,

$$aa = a^2 > 0 \Rightarrow (a, a) \in R \quad \forall a \in \mathbb{R} \quad aa = a^2 > 0 \Rightarrow a, a \in \mathbb{R} \quad \forall a \in \mathbb{R}$$

So, S is reflexive on \mathbb{R} .

Symmetry: Let $(a, b) \in S$

Then,

$$(a, b) \in S \Rightarrow ab \geq 0 \Rightarrow ba \geq 0 \Rightarrow (b, a) \in S \quad \forall a, b \in \mathbb{R} \quad (a, b) \in S \Rightarrow ab \geq 0 \Rightarrow ba \geq 0 \Rightarrow (b, a) \in S \quad \forall a, b \in \mathbb{R}$$

So, S is symmetric on \mathbb{R} .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Transitivity:

If $(a, b), (b, c) \in S \Rightarrow ab \geq 0$ and $bc \geq 0 \Rightarrow ab \times bc \geq 0 \Rightarrow ac \geq 0$ [$\because b^2 \geq 0$]
 $(a, c) \in S$ for all $a, b, c \in \text{set } R$ If $a, b, b, c \in S \Rightarrow ab \geq 0$ and $bc \geq 0 \Rightarrow ab \times bc \geq 0 \Rightarrow ac \geq 0$
 $\therefore b^2 \geq 0 \Rightarrow a, c \in S$ for all $a, b, c \in \text{set } R$

Hence, S is an equivalence relation on R .

Page No 1.31:

Question 26:

In the set Z of all integers, which of the following relation R is not an equivalence relation?

- (a) $x R y$: if $x \leq y$
- (b) $x R y$: if $x = y$
- (c) $x R y$: if $x - y$ is an even integer
- (d) $x R y$: if $x \equiv y \pmod{3}$

ANSWER:

- (a) $x R y$: if $x \leq y$

Clearly, R is not symmetric because $x < y$ does not imply $y < x$.

Hence, (a) is not an equivalence relation.

Page No 1.31:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Question 27:

Mark the correct alternative in the following question:

Let $A = \{1, 2, 3\}$ and consider the relation $R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 3), (1, 3)\}$. Then, R is

(a) reflexive but not symmetric
not transitive

(b) reflexive but

(c) symmetric and transitive
symmetric nor transitive

(d) neither

ANSWER:

We have,

$$R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 3), (1, 3)\}$$

As, $(a, a) \in R \forall a \in A$ So, R is reflexive relation
Also, $(1, 2) \in R$ but $(2, 1) \notin R$ So, R is not symmetric relation
And, $(1, 2) \in R, (2, 3) \in R$ and $(1, 3) \in R$ So, R is transitive relation
As, $a, a \in R \forall a \in A$ So, R is reflexive relation
Also, $1, 2 \in R$ but $2, 1 \notin R$ So, R is not symmetric relation
And, $1, 2 \in R, 2, 3 \in R$ and $1, 3 \in R$ So, R is transitive relation

Hence, the correct alternative is option (a).

Page No 1.31:

Question 28:

Mark the correct alternative in the following question:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

The relation S defined on the set \mathbf{R} of all real number by the rule aSb iff $a \geq b$ is

- (a) an equivalence relation
- (b) reflexive, transitive but not symmetric
- (c) symmetric, transitive but not reflexive
- (d) neither transitive nor reflexive but symmetric

ANSWER:

We have,

$$S = \{(a, b) : a \geq b; a, b \in \mathbf{R}\}$$

As, $a = a \quad \forall a \in \mathbf{R} \Rightarrow (a, a) \in S$ So, S is reflexive relation
Let $(a, b) \in S \Rightarrow a \geq b$ But $b \leq a \Rightarrow (b, a) \notin S$ So, S is not symmetric relation
Let $(a, b) \in S$ and $(b, c) \in S \Rightarrow a \geq b$ and $b \geq c \Rightarrow a \geq c \Rightarrow (a, c) \in S$ So, S is transitive relation
As, $a = a \quad \forall a \in \mathbf{R} \Rightarrow (a, a) \in S$ So, S is reflexive relation
Let $a, b \in S \Rightarrow a \geq b$ But $b \leq a \Rightarrow (b, a) \notin S$ So, S is not symmetric relation
Let $a, b \in S$ and $b, c \in S \Rightarrow a \geq b$ and $b \geq c \Rightarrow a \geq c \Rightarrow (a, c) \in S$ So, S is transitive relation

Hence, the correct alternative is option (b).

Page No 1.31:

Question 29:

Mark the correct alternative in the following question:

The maximum number of equivalence relations on the set $A = \{1, 2, 3\}$ is

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

(a) 1

(b) 2

(c) 3

(d) 5

ANSWER:

Consider the relation $R_1 = \{(1, 1)\}$ It is clearly reflexive, symmetric and transitive Similarly, $R_2 = \{(2, 2)\}$ and $R_3 = \{(3, 3)\}$ are reflexive, symmetric and transitive Also, $R_4 = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1)\}$ It is reflexive as $(a, a) \in R_4$ for all $a \in \{1, 2, 3\}$ It is symmetric as $(a, b) \in R_4 \Rightarrow (b, a) \in R_4$ for all $a \in \{1, 2, 3\}$ Also, it is transitive as $(1, 2) \in R_4, (2, 1) \in R_4 \Rightarrow (1, 1) \in R_4$ The relation defined by $R_5 = \{(1, 1), (2, 2), (3, 3), (1, 2), (1, 3), (2, 1), (2, 3), (3, 1), (3, 2)\}$ is reflexive, symmetric and transitive as well. Thus, the maximum number of equivalence relation on set $A = \{1, 2, 3\}$ is 5. Consider the relation $R_1 = 1, 1$ It is clearly reflexive, symmetric and transitive Similarly, $R_2 = 2, 2$ and $R_3 = 3, 3$ are reflexive, symmetric and transitive Also, $R_4 = 1, 1, 2, 2, 3, 3, 1, 2, 2, 1$ It is reflexive as $a, a \in R_4$ for all $a \in 1, 2, 3$ It is symmetric as $a, b \in R_4 \Rightarrow b, a \in R_4$ for all $a \in 1, 2, 3$ Also, it is transitive as $1, 2 \in R_4, 2, 1 \in R_4 \Rightarrow (1, 1) \in R_4$ The relation defined by $R_5 = 1, 1, 2, 2, 3, 3, 1, 2, 1, 3, 2, 1, 2, 3, 3, 1, 3, 2$ is reflexive, symmetric and transitive as well. Thus, the maximum number of equivalence relation on set $A = \{1, 2, 3\}$ is 5.

Hence, the correct alternative is option (d).

Page No 1.31:

Question 30:

Mark the correct alternative in the following question:

Let R be a relation on the set \mathbf{N} of natural numbers defined by nRm iff n divides m . Then, R is

(a) Reflexive and symmetric
symmetric

(b) Transitive and

(c) Equivalence
but not symmetric

(d) Reflexive, transitive

[NCERT EXEMPLAR]

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

ANSWER:

We have,

$$R = \{(m, n) : n \text{ divides } m; m, n \in \mathbf{N}\}$$

As, m divides $m \Rightarrow (m, m) \in R \quad \forall m \in \mathbf{N}$ So, R is reflexive
Since, $(2, 1) \in R$ i.e. 1 divides 2 but 2 cannot divide 1 i.e. $(2, 1) \notin R$ So, R is not symmetric
Let $(m, n) \in R$ and $(n, p) \in R$. Then, n divides m and p divides $n \Rightarrow p$ divides $m \Rightarrow (m, p) \in R$ So, R is transitive
As, m divides $m \Rightarrow m, m \in R \quad \forall m \in \mathbf{N}$ So, R is reflexive
Since, $(2, 1) \in R$ i.e. 1 divides 2 but 2 cannot divide 1 i.e. $(2, 1) \notin R$ So, R is not symmetric
Let $m, n \in R$ and $n, p \in R$. Then, n divides m and p divides $n \Rightarrow p$ divides $m \Rightarrow m, p \in R$ So, R is transitive

Hence, the correct alternative is option (d).

Page No 1.31:

Question 31:

Mark the correct alternative in the following question:

Let L denote the set of all straight lines in a plane. Let a relation R be defined by lRm iff l is perpendicular to m for all $l, m \in L$. Then, R is

(a) reflexive
(d) none of these

(b) symmetric

(c) transitive

[NCERT EXEMPLAR]

ANSWER:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

We have, $R = \{(l, m) : l \text{ is perpendicular to } m; l, m \in L\}$ As, l is not perpendicular to $l \Rightarrow (l, l) \notin R$ So, R is not reflexive relation Let $(l, m) \in R \Rightarrow l$ is perpendicular to $m \Rightarrow m$ is also perpendicular to $l \Rightarrow (m, l) \in R$ So, R is symmetric relation Let $(l, m) \in R$ and $(m, n) \in R \Rightarrow l$ is perpendicular to m and m is perpendicular to $n \Rightarrow l$ is parallel to n (Lines perpendicular to same line are parallel) $\Rightarrow (m, l) \notin R$ So, R is not transitive relation We have, $R = \{l, m : l \text{ is perpendicular to } m; l, m \in L\}$ As, l is not perpendicular to $l \Rightarrow (l, l) \notin R$ So, R is not reflexive relation Let $l, m \in R \Rightarrow l$ is perpendicular to $m \Rightarrow m$ is also perpendicular to $l \Rightarrow m, l \in R$ So, R is symmetric relation Let $l, m \in R$ and $m, n \in R \Rightarrow l$ is perpendicular to m and m is perpendicular to $n \Rightarrow l$ is parallel to n Lines perpendicular to same line are parallel $\Rightarrow m, l \notin R$ So, R is not transitive relation

Hence, the correct alternative is option (b).

Page No 1.32:

Question 32:

Mark the correct alternative in the following question:

Let T be the set of all triangles in the Euclidean plane, and let a relation R on T be defined as aRb if a is congruent to b for all $a, b \in T$. Then, R is

- a) reflexive but not symmetric (b)
- transitive but not symmetric
- c) equivalence (d) none
- of these

ANSWER:

We have, $R = \{(a, b) : a \text{ is congruent to } b; a, b \in T\}$ As, $a \cong a \Rightarrow (a, a) \in R$ So, R is reflexive relation Let $(a, b) \in R$. Then, $a \cong b \Rightarrow b \cong a \Rightarrow (b, a) \in R$ So, R is symmetric relation Let $(a, b) \in R$ and $(b, c) \in R$. Then, $a \cong b$ and $b \cong c \Rightarrow a \cong c \Rightarrow (a, c) \in R$ So, R is transitive relation. $\therefore R$ is an equivalence relation We have, $R = \{a, b : a \text{ is congruent to } b; a, b \in T\}$ As, $a \cong a \Rightarrow (a, a) \in R$ So, R is reflexive relation Let $a, b \in R$. Then, $a \cong b \Rightarrow b \cong a \Rightarrow (b, a) \in R$ So, R is symmetric relation Let

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$a, b \in R$ and $b, c \in R$. Then, $a \approx b$ and $b \approx c \Rightarrow a \approx c \Rightarrow a, c \in R$ So, R is transitive relation. $\therefore R$ is an equivalence relation

Hence, the correct alternative is option (c).

Page No 1.32:

Question 33:

Mark the correct alternative in the following question:

Consider a non-empty set consisting of children in a family and a relation R defined as aRb if a is brother of b . Then, R is

- (a) symmetric but not transitive (b)
transitive but not symmetric
- (c) neither symmetric nor transitive (d) both
symmetric and transitive

ANSWER:

We have, $R = \{(a, b) : a \text{ is brother of } b\}$ Let $(a, b) \in R$. Then, a is brother of b but b is not necessary brother of a (As, b can be sister of a) $\Rightarrow (b, a) \notin R$ So, R is not symmetric Also, Let $(a, b) \in R$ and $(b, c) \in R \Rightarrow a$ is brother of b and b is brother of $c \Rightarrow a$ is brother of $c \Rightarrow (a, c) \in R$ So, R is transitive We have, $R = \{(a, b) : a \text{ is brother of } b\}$ Let $a, b \in R$. Then, a is brother of b but b is not necessary brother of a As, b can be sister of a $\Rightarrow a \neq b, a \notin R$ So, R is not symmetric Also, Let $a, b \in R$ and $b, c \in R \Rightarrow a$ is brother of b and b is brother of $c \Rightarrow a$ is brother of $c \Rightarrow a, c \in R$ So, R is transitive

Hence, the correct alternative is option (b).

Page No 1.32:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Question 34:

Mark the correct alternative in the following question:

For real numbers x and y , define xRy iff $x-y+2-\sqrt{x-y+2}$ is an irrational number. Then the relation R is

- (a) reflexive (b) symmetric (c) transitive
(d) none of these

ANSWER:

We have, $R = \{(x, y) : x - y + 2 - \sqrt{x - y + 2} \text{ is an irrational number; } x, y \in \mathbb{R}\}$ As, $x - x + 2 - \sqrt{x - x + 2} = 2 - \sqrt{2}$, which is an irrational number $\Rightarrow (x, x) \in R$ So, R is reflexive relation Since, $(2 - \sqrt{2}, 2) \in R$ i.e. $2 - \sqrt{2} - 2 + 2 - \sqrt{2 - \sqrt{2} - 2} = 2 - \sqrt{2} - 2$, which is an irrational number but $2 - 2 - \sqrt{2} + 2 - \sqrt{2} = 2$, which is a rational number $\Rightarrow (2, 2 - \sqrt{2}) \notin R$ So, R is not symmetric relation Also, $(2 - \sqrt{2}, 2) \in R$ and $(2, 2 - \sqrt{2}) \in R$ i.e. $2 - \sqrt{2} - 2 + 2 - \sqrt{2} = 2 - \sqrt{2} - 2$, which is an irrational number and $2 - 2 - \sqrt{2} + 2 - \sqrt{2} = 2 - 2 - \sqrt{2}$, which is also an irrational number But $2 - \sqrt{2} - 2 - \sqrt{2} + 2 - \sqrt{2} = 0$, which is a rational number $\Rightarrow (2 - \sqrt{2}, 2 - \sqrt{2}) \notin R$ So, R is not transitive relation We have, $R = \{(x, y) : x - y + 2 \text{ is an irrational number; } x, y \in \mathbb{R}\}$ As, $x - x + 2 = 2$, which is an irrational number $\Rightarrow (x, x) \in R$ So, R is reflexive relation Since, $(2, 2) \in R$ i.e. $2 - 2 + 2 = 2 - 2 + 2 = 2$, which is an irrational number but $2 - 2 + 2 = 2$, which is a rational number $\Rightarrow (2, 2) \notin R$ So, R is not symmetric relation Also, $(2, 2) \in R$ and $(2, 2) \in R$ i.e. $2 - 2 + 2 = 2 - 2 + 2 = 2$, which is an irrational number and $2 - 2 + 2 = 2 - 2 + 2 = 2$, which is also an irrational number But $2 - 2 + 2 = 0$, which is a rational number $\Rightarrow (2, 2) \notin R$ So, R is not transitive relation

Hence, the correct alternative is option (a).

Page No 1.32:**Question 35:**

If a relation R on the set $\{1, 2, 3\}$ be defined by $R = \{(1, 2)\}$, then R is

- (a) reflexive (b) transitive (c) symmetric (d) none of these

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

ANSWER:

Given: A relation R on the set $\{1, 2, 3\}$ be defined by $R = \{(1, 2)\}$.

$$R = \{(1, 2)\}$$

Since, $(1, 1) \notin R$

Therefore, It is not reflexive.

Since, $(1, 2) \in R$ but $(2, 1) \notin R$

Therefore, It is not symmetric.

But there is no counter example to disapprove transitive condition.

Therefore, it is transitive.

Hence, the correct option is (b).

Page No 1.32:**Question 1:**

If $R = \{(x, y): x^2 + y^2 \leq 4, x, y \in \mathbb{Z}\}$ is a relation in \mathbb{Z} , then the domain of R is _____.

ANSWER:

Given: $R = \{(x, y): x^2 + y^2 \leq 4, x, y \in \mathbb{Z}\}$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

$$R = \{(-2, 0), (2, 0), (0, 2), (0, -2), (-1, 1), (-1, -1), (1, -1), (1, 1), (0, 1), (1, 0), (-1, 0), (0, -1), (0, 0)\}$$

Therefore, Domain of $R = \{-2, -1, 0, 1, 2\}$

Hence, if $R = \{(x, y): x^2 + y^2 \leq 4, x, y \in \mathbb{Z}\}$ is a relation in \mathbb{Z} , then the domain of R is $\{-2, -1, 0, 1, 2\}$.

Page No 1.32:

Question 2:

Let R be a relation in N defined by $R = \{(x, y): x + 2y = 8\}$, then the range of R is _____.

ANSWER:

Given: $R = \{(x, y): x + 2y = 8\}$ where $x, y \in N$

$$R = \{(6, 1), (4, 2), (2, 3)\}$$

Therefore, Range of $R = \{1, 2, 3\}$

Hence, the range of R is $\{1, 2, 3\}$.

Page No 1.32:

Question 3:

The number of relations on a finite set having 5 elements is _____.

ANSWER:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Let R be a relation on A , where A contains 5 elements.

R is a subset of $A \times A$.

Number of elements in $A \times A = 5 \times 5 = 25$

Number of relations = Number of subsets of $A \times A = 2^{25}$

Hence, the number of relations on a finite set having 5 elements is 2^{25} .

Page No 1.32:

Question 4:

Let $A = \{1, 2, 3, 4\}$ and R be the relation on A defined by $\{(a, b) : a, b \in A, a \times b \text{ is an even number}\}$, then the range of R is _____.

ANSWER:

Given: $R = \{(a, b) : a, b \in A, a \times b \text{ is an even number}\}$, where $A = \{1, 2, 3, 4\}$.

$R = \{(1, 2), (1, 4), (2, 1), (2, 2), (2, 3), (2, 4), (3, 2), (3, 4), (4, 1), (4, 2), (4, 3), (4, 4)\}$

Therefore, Range of $R = \{1, 2, 3, 4\}$

Hence, the range of R is $\{1, 2, 3, 4\}$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Page No 1.32:

Question 5:

Let $A = \{1, 2, 3, 4, 5\}$ The domain of the relation on A defined by $R = \{(x, y): y = 2x - 1\}$, is _____.

ANSWER:

Given: $R = \{(x, y): y = 2x - 1\}$, where $A = \{1, 2, 3, 4, 5\}$ and $x, y \in A$.

$$R = \{(1, 1), (2, 3), (3, 5)\}$$

Therefore, Domain of $R = \{1, 2, 3\}$.

Hence, the domain of the relation on A defined by $R = \{(x, y): y = 2x - 1\}$, is $\{1, 2, 3\}$.

Page No 1.32:

Question 6:

If R is a relation defined on set $A = \{1, 2, 3\}$ by the rule $(a, b) \in R \Leftrightarrow ||a^2 - b^2| | \leq 5, \in R \Leftrightarrow a^2 - b^2 \leq 5$, then $R^{-1} =$ _____.

ANSWER:

Given: $R = \{(a, b): ||a^2 - b^2| | \leq 5, a^2 - b^2 \leq 5\}$, where $A = \{1, 2, 3\}$ and $a, b \in A$.

$$R = \{(1, 1), (1, 2), (2, 1), (2, 2), (2, 3), (3, 2), (3, 3)\}$$

Therefore, $R^{-1} = \{(1, 1), (2, 1), (1, 2), (2, 2), (3, 2), (2, 3), (3, 3)\} = R$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Hence, if R is a relation defined on set $A = \{1, 2, 3\}$ by the rule $(a, b) \in R \Leftrightarrow |a^2 - b^2| \leq 5$, then $R^{-1} = R$.

Page No 1.32:

Question 7:

If R is a relation from $A = \{11, 12, 13\}$ to $B = \{8, 10, 12\}$ defined by $y = x - 3$, then $R^{-1} =$ _____.

ANSWER:

Given: $R = \{(x, y) : y = x - 3, x \in A \text{ and } y \in B\}$, where $A = \{11, 12, 13\}$ and $B = \{8, 10, 12\}$.

$$R = \{(11, 8), (13, 10)\}$$

Therefore, $R^{-1} = \{(8, 11), (10, 13)\}$

Hence, $R^{-1} = \{(8, 11), (10, 13)\}$.

Page No 1.32:

Question 8:

The smallest equivalence relation on the set $A = \{a, b, c, d\}$ is _____.

ANSWER:

Given: $A = \{a, b, c, d\}$

Identity relation is the smallest equivalence relation.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Therefore, $R = \{(a, a), (b, b), (c, c)\}$ is the smallest equivalence relation.

Hence, the smallest equivalence relation on the set $A = \{a, b, c, d\}$ is $\{(a, a), (b, b), (c, c)\}$.

Page No 1.32:

Question 9:

The largest equivalence relation on the set $A = \{1, 2, 3\}$ is _____.

ANSWER:

Given: $A = \{1, 2, 3\}$

The largest equivalence relation contains all the possible ordered pairs.

Therefore, $R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (2, 3), (3, 2), (1, 3), (3, 1)\}$ is the largest equivalence relation.

Hence, the largest equivalence relation on the set $A = \{1, 2, 3\}$ is $\{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (2, 3), (3, 2), (1, 3), (3, 1)\}$.

Page No 1.32:

Question 10:

Let R be the equivalence relation on the set Z of integers given by $R = \{(a, b): 3 \text{ divides } a-b\}$. Then the equivalence class $[0]$ is equal to _____.

ANSWER:

Given: R is the equivalence relation on the set Z of integers given by $R = \{(a, b): 3 \text{ divides } a - b\}$.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

To find the equivalence class $[0]$, we put $b = 0$ in the given relation and find all the possible values of a .

Thus,

$$R = \{(a, 0) : 3 \text{ divides } a - 0\}$$

$\Rightarrow a - 0$ is a multiple of 3

$\Rightarrow a$ is a multiple of 3

$\Rightarrow a = 3n$, where $n \in \mathbb{Z}$

$\Rightarrow a = 0, \pm 3, \pm 6, \pm 9, \dots$

Therefore, equivalence class $[0] = \{0, \pm 3, \pm 6, \pm 9, \dots\}$

Hence, the equivalence class $[0]$ is equal to $\{0, \pm 3, \pm 6, \pm 9, \dots\}$.

Page No 1.32:

Question 11:

Let R be a relation on the set \mathbb{Z} of all integers defined as $(x, y) \in R \Leftrightarrow x - y$ is divisible by 2. Then, the equivalence class $[1]$ is _____.

ANSWER:

Given: R is the equivalence relation on the set \mathbb{Z} of integers defined as $(x, y) \in R \Leftrightarrow x - y$ is divisible by 2.

To find the equivalence class $[1]$, we put $y = 1$ in the given relation and find all the possible values of x .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Thus,

$$R = \{(x, 1): x - 1 \text{ is divisible by } 2\}$$

$$\Rightarrow x - 1 \text{ is divisible by } 2$$

$$\Rightarrow x = \pm 1, \pm 3, \pm 6, \pm 9, \dots$$

Therefore, equivalence class $[0] = \{\pm 1, \pm 3, \pm 6, \pm 9, \dots\}$

Hence, the equivalence class $[1]$ is $\{\pm 1, \pm 3, \pm 6, \pm 9, \dots\}$.

Page No 1.32:

Question 12:

The relation $R = \{(1, 2), (1, 3)\}$ on set $A = [1, 2, 3]$ is _____ only.

ANSWER:

Given: A relation R on the set $\{1, 2, 3\}$ be defined by $R = R = \{(1, 2), (1, 3)\}$.

$$R = \{(1, 2), (1, 3)\}$$

Since, $(1, 1) \notin R$

Therefore, It is not reflexive.

Since, $(1, 2) \in R$ but $(2, 1) \notin R$

Therefore, It is not symmetric.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

But there is no counter example to disapprove transitive condition.

Therefore, it is transitive.

Hence, The relation $R = \{(1, 2), (1, 3)\}$ on set $A = \{1, 2, 3\}$ is transitive only.

Page No 1.33:

Question 1:

Write the domain of the relation R defined on the set Z of integers as follows:

$$(a, b) \in R \Leftrightarrow a^2 + b^2 = 25$$

ANSWER:

Domain of R is the set of values satisfying the relation R .

As a should be an integer, we get the given values of a :

$0, \pm 3, \pm 4, \pm 5$ Thus, Domain of $R = \{0, \pm 3, \pm 4, \pm 5\}$

Page No 1.33:

Question 2:

If $R = \{(x, y) : x^2 + y^2 \leq 4; x, y \in Z\}$ is a relation on Z , write the domain of R .

ANSWER:

Domain of R is the set of values of x satisfying the relation R .

As x must be an integer, we get the given values of x :

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

0, ± 1 , ± 2 Thus, Domain of $R = \{0, \pm 1, \pm 2\}$

Page No 1.33:

Question 3:

Write the identity relation on set $A = \{a, b, c\}$.

ANSWER:

Identity set of A is

$$I = \{(a, a), (b, b), (c, c)\}$$

Every element of this relation is related to itself.

Page No 1.33:

Question 4:

Write the smallest reflexive relation on set $A = \{1, 2, 3, 4\}$.

ANSWER:

Here,

$$A = \{1, 2, 3, 4\}$$

Also, a relation is reflexive iff every element of the set is related to itself.

So, the smallest reflexive relation on the set A is

$$R = \{(1, 1), (2, 2), (3, 3), (4, 4)\}$$

Page No 1.33:

Question 5:

If $R = \{(x, y) : x + 2y = 8\}$ is a relation on N by, then write the range of R .

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

ANSWER:

$$R = \{(x, y) : x + 2y = 8, x, y \in \mathbb{N}\}$$

Then, the values of y can be 1, 2, 3 only.

Also, $y = 4$ cannot result in $x = 0$ because x is a natural number.

Therefore, range of R is $\{1, 2, 3\}$.

Page No 1.33:

Question 6:

If R is a symmetric relation on a set A , then write a relation between R and R^{-1} .

ANSWER:

Here, R is symmetric on the set A .

Let $(a, b) \in R \Rightarrow (b, a) \in R$ [Since R is symmetric] $\Rightarrow (a, b) \in R^{-1}$ [By definition of inverse relation] $\Rightarrow R \subset R^{-1}$
Let $(x, y) \in R^{-1} \Rightarrow (y, x) \in R$ [By definition of inverse relation] $\Rightarrow (x, y) \in R$ [Since R is symmetric] $\Rightarrow R^{-1} \subset R$
Thus, $R = R^{-1}$
Let $a, b \in R \Rightarrow b, a \in R$ Since R is symmetric $\Rightarrow a, b \in R^{-1}$ By definition of inverse relation $\Rightarrow R \subset R^{-1}$
Let $x, y \in R^{-1} \Rightarrow y, x \in R$ By definition of inverse relation $\Rightarrow x, y \in R$
Since R is symmetric $\Rightarrow R^{-1} \subset R$
Thus, $R = R^{-1}$

Page No 1.33:

Question 7:

Let $R = \{(x, y) : |x^2 - y^2| < 1\}$ be a relation on set $A = \{1, 2, 3, 4, 5\}$. Write R as a set of ordered pairs.

ANSWER:

R is the set of ordered pairs satisfying the above relation. Also, no two different elements can satisfy the relation; only the same elements can satisfy the given relation.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

So, $R = \{(1, 1), (2, 2), (3, 3), (4, 4), (5, 5)\}$

Page No 1.33:

Question 8:

If $A = \{2, 3, 4\}$, $B = \{1, 3, 7\}$ and $R = \{(x, y) : x \in A, y \in B \text{ and } x < y\}$ is a relation from A to B , then write R^{-1} .

ANSWER:

Since $R = \{(x, y) : x \in A, y \in B \text{ and } x < y\}$,

$R = \{(2, 3), (2, 7), (3, 7), (4, 7)\}$

So, $R^{-1} = \{(3, 2), (7, 2), (7, 3), (7, 4)\}$

Page No 1.33:

Question 9:

Let $A = \{3, 5, 7\}$, $B = \{2, 6, 10\}$ and R be a relation from A to B defined by $R = \{(x, y) : x \text{ and } y \text{ are relatively prime}\}$. Then, write R and R^{-1} .

ANSWER:

$R = \{(x, y) : x \text{ and } y \text{ are relatively prime}\}$

Then,

$R = \{(3, 2), (5, 2), (7, 2), (3, 10), (7, 10), (5, 6), (7, 6)\}$

So, $R^{-1} = \{(2, 3), (2, 5), (2, 7), (10, 3), (10, 7), (6, 5), (6, 7)\}$

Page No 1.33:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Question 10:

Define a reflexive relation.

ANSWER:

A relation R on A is said to be reflexive iff every element of A is related to itself.

i.e. R is reflexive $\Leftrightarrow (a, a) \in R$ for all $a \in A \Leftrightarrow a, a \in R$ for all $a \in A$

Page No 1.33:**Question 11:**

Define a symmetric relation.

ANSWER:

A relation R on a set A is said to be symmetric iff

$(a, b) \in R \Rightarrow (b, a) \in R$ for all $a, b \in A$. i.e. $aRb \Rightarrow bRa$ for all $a, b \in A$

Page No 1.33:**Question 12:**

Define a transitive relation.

ANSWER:

A relation R on a set A is said to be transitive iff

$(a, b) \in R$ and $(b, c) \in R \Rightarrow (a, c) \in R$ for all $a, b, c \in A$. i.e. aRb and $bRc \Rightarrow aRc$ for all $a, b, c \in A$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Page No 1.33:

Question 13:

Define an equivalence relation.

ANSWER:

A relation R on set A is said to be an equivalence relation iff

- (i) it is reflexive,
- (ii) it is symmetric and
- (iii) it is transitive.

Relation R on set A satisfying all the above three properties is an equivalence relation.

Page No 1.33:

Question 14:

If $A = \{3, 5, 7\}$ and $B = \{2, 4, 9\}$ and R is a relation given by "is less than", write R as a set ordered pairs.

ANSWER:

Since, $R = \{(x, y) : x, y \in \mathbb{N} \text{ and } x < y\}$, $R = \{(3, 4), (3, 9), (5, 9), (7, 9)\}$ Since, $R = \{(x, y) : x, y \in \mathbb{N} \text{ and } x < y\}$, $R = \{(3, 4), (3, 9), (5, 9), (7, 9)\}$

Page No 1.33:

Question 15:

$A = \{1, 2, 3, 4, 5, 6, 7, 8\}$ and if $R = \{(x, y) : y \text{ is one half of } x; x, y \in A\}$ is a relation on A , then write R as a set of ordered pairs.

ANSWER:

Since $R = \{(x, y) : y \text{ is one half of } x; x, y \in A\}$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

So, $R = \{(2, 1), (4, 2), (6, 3), (8, 4)\}$

Page No 1.33:

Question 16:

Let $A = \{2, 3, 4, 5\}$ and $B = \{1, 3, 4\}$. If R is the relation from A to B given by $a R b$ if " a is a divisor of b ". Write R as a set of ordered pairs.

ANSWER:

Since $R = \{(a, b) : a, b \in \mathbb{N} : a \text{ is a divisor of } b\}$ Since $R = a, b : a, b \in \mathbb{N} : a \text{ is a divisor of } b$

So, $R = \{(2, 4), (3, 3), (4, 4)\}$

Page No 1.33:

Question 17:

State the reason for the relation R on the set $\{1, 2, 3\}$ given by $R = \{(1, 2), (2, 1)\}$ to be transitive.

ANSWER:

Since $(1, 2) \in R, (2, 1) \in R$ but $(1, 1) \notin R$, R is not transitive on the set $\{1, 2, 3\}$. For R to be in a transitive relation, we must have $(1, 1) \in R$. Since $1, 2 \in R, 2, 1 \in R$ but $1, 1 \notin R$, R is not transitive on the set $1, 2, 3$. For R to be in a transitive relation, we must have $1, 1 \in R$.

Page No 1.33:

Question 18:

Let $R = \{(a, a^3) : a \text{ is a prime number less than } 5\}$ be a relation. Find the range of R .
[CBSE 2014]

ANSWER:

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

We have,

$$R = \{(a, a^3) : a \text{ is a prime number less than } 5\}$$

Or,

$$R = \{(2, 8), (3, 27)\}$$

So, the range of R is $\{8, 27\}$.

Page No 1.33:

Question 19:

Let R be the equivalence relation on the set \mathbf{Z} of the integers given by $R = \{(a, b) : 2 \text{ divides } a - b\}$. Write the equivalence class $[0]$.

[NCERT EXEMPLAR]

ANSWER:

We have,

An equivalence relation, $R = \{(a, b) : 2 \text{ divides } a - b\}$

If $b=0$, then $a-b=a-0=a$. As, 2 divides $a-b$ and the set of integers which are divided by 2 is $\{0, \pm 2, \pm 4, \pm 6, \dots\}$. So, the equivalence class $[0] = \{0, \pm 2, \pm 4, \pm 6, \dots\}$.
If $b=0$, then $a-b=a-0=a$. As, 2 divides $a-b$ and the set of integers which are divided by 2 is $0, \pm 2, \pm 4, \pm 6, \dots$. So, the equivalence class $[0] = 0, \pm 2, \pm 4, \pm 6, \dots$

Page No 1.33:

Question 20:

For the set $A = \{1, 2, 3\}$, define a relation R on the set A as follows:

$$R = \{(1, 1), (2, 2), (3, 3), (1, 3)\}$$

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

Write the ordered pairs to be added to R to make the smallest equivalence relation.

ANSWER:

We have,

$$R = \{(1, 1), (2, 2), (3, 3), (1, 3)\}$$

As, $(a, a) \in R$, for all values of $a \in A$

So, R is a reflexive relation

R can be a symmetric and transitive relation only when element $(3, 1)$ is added

Hence, the ordered pairs to be added to R to make the smallest equivalence relation is $(3, 1)$.

Page No 1.33:

Question 21:

Let $A = \{0, 1, 2, 3\}$ and R be a relation on A defined as

$$R = \{(0, 0), (0, 1), (0, 3), (1, 0), (1, 1), (2, 2), (3, 0), (3, 3)\}$$

Is R reflexive? symmetric? transitive?

ANSWER:

We have,

$$R = \{(0, 0), (0, 1), (0, 3), (1, 0), (1, 1), (2, 2), (3, 0), (3, 3)\}$$

As, $(a, a) \in R \forall a \in A$ So, R is a reflexive relation
Also, $(a, b) \in R$ and $(b, a) \in R$ So, R is a symmetric relation as well
And, $(0, 1) \in R$ but $(1, 2) \notin R$ and $(2, 3) \notin R$ So, R is not a transitive

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>

relations, $a, a \in R \forall a \in A$ So, R is a reflexive relation Also, $a, b \in R$ and $b, a \in R$ So, R is a symmetric relation as well And, $0, 1 \in R$ but $1, 2 \notin R$ and $2, 3 \notin R$ So, R is not a transitive relation

Page No 1.33:

Question 22:

Let the relation R be defined on the set $A = \{1, 2, 3, 4, 5\}$ by $R = \{(a, b) : |a^2 - b^2| < 8\}$. Write R as a set of ordered pairs.

ANSWER:

As, $R = \{(a, b) : |a^2 - b^2| < 8\}$

So, $R = \{(1, 1), (1, 2), (2, 1), (2, 2), (2, 3), (3, 2), (3, 3), (3, 4), (4, 3), (4, 4), (5, 5)\}$

Page No 1.34:

Question 23:

Let the relation R be defined on \mathbf{N} by aRb iff $2a + 3b = 30$. Then write R as a set of ordered pairs.

ANSWER:

As, $R = \{(a, b) : 2a + 3b = 30; a, b \in \mathbf{N}\}$

So, $R = \{(3, 8), (6, 6), (9, 4), (12, 2)\}$

Page No 1.34:

Question 24:

Write the smallest equivalence relation on the set $A = \{1, 2, 3\}$.

ANSWER:

The smallest equivalence relation on the set $A = \{1, 2, 3\}$ is $R = \{(1, 1), (2, 2), (3, 3)\}$

About RD Sharma

RD Sharma isn't the kind of author you'd bump into at lit fests. But his bestselling books have helped many CBSE students lose their dread of maths. Sunday Times profiles the tutor turned internet star

He dreams of algorithms that would give most people nightmares. And, spends every waking hour thinking of ways to explain concepts like 'series solution of linear differential equations'. Meet Dr Ravi Dutt Sharma — mathematics teacher and author of 25 reference books — whose name evokes as much awe as the subject he teaches. And though students have used his thick tomes for the last 31 years to ace the dreaded maths exam, it's only recently that a spoof video turned the tutor into a YouTube star.

R D Sharma had a good laugh but said he shared little with his on-screen persona except for the love for maths. "I like to spend all my time thinking and writing about maths problems. I find it relaxing," he says. When he is not writing books explaining mathematical concepts for classes 6 to 12 and engineering students, Sharma is busy dispensing his duty as vice-principal and head of department of science and humanities at Delhi government's Guru Nanak Dev Institute of Technology.

<https://www.indcareer.com/schools/rd-sharma-solutions-for-class-12-maths-chapter-1-relation/>
