RS Aggarwal Solutions for Class 7 Maths Chapter 20–Mensuration

Class 7: Maths Chapter 20 solutions. Complete Class 7 Maths Chapter 20 Notes.

RS Aggarwal Solutions for Class 7 Maths Chapter 20–Mensuration

RS Aggarwal 7th Maths Chapter 20, Class 7 Maths Chapter 20 solutions

Q1

Answer :

(i) Length = 24.5 m

Breadth = 18 m

$$\begin{aligned}\therefore \text{Area of the rectangle} &= \text{Length} \times \text{Breadth} \\ &= 24.5 \text{ m} \times 18 \text{ m} \\ &= 441 \text{ m}^2\end{aligned}$$

(ii) Length = 12.5 m

Breadth = 8 dm = $(8 \times 10) = 80 \text{ cm} = 0.8 \text{ m}$ [since 1 dm = 10 cm and 1 m = 100 cm]

$$\begin{aligned}\therefore \text{Area of the rectangle} &= \text{Length} \times \text{Breadth} \\ &= 12.5 \text{ m} \times 0.8 \text{ m} \\ &= 10 \text{ m}^2\end{aligned}$$

Q2

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

We know that all the angles of a rectangle are 90° and the diagonal divides the rectangle into two right angled triangles.

So, 48 m will be one side of the triangle and the diagonal, which is 50 m, will be the hypotenuse.

According to the Pythagoras theorem:

$$(\text{Hypotenuse})^2 = (\text{Base})^2 + (\text{Perpendicular})^2$$

$$\text{Perpendicular} = \sqrt{(\text{Hypotenuse})^2 - (\text{Base})^2}$$

$$\text{Perpendicular} = \sqrt{(50)^2 - (48)^2} = \sqrt{2500 - 2304} = \sqrt{196} = 14 \text{ m}$$

\therefore Other side of the rectangular plot = 14 m

Length = 48m

Breadth = 14m

\therefore Area of the rectangular plot = $48 \text{ m} \times 14 \text{ m} = 672 \text{ m}^2$

Hence, the area of a rectangular plot is 672 m^2 .

Q3

Answer :

Let the length of the field be $4x$ m.

Breadth = $3x$ m

\therefore Area of the field = $(4x \times 3x) \text{ m}^2 = 12x^2 \text{ m}^2$

But it is given that the area is 1728 m^2 .

$$\therefore 12x^2 = 1728$$

$$\Rightarrow x^2 = \left(\frac{1728}{12}\right) = 144$$

$$\Rightarrow x = \sqrt{144} = 12$$

\therefore Length = $(4 \times 12) \text{ m} = 48 \text{ m}$

Breadth = $(3 \times 12) \text{ m} = 36 \text{ m}$

\therefore Perimeter of the field = $2(l + b)$ units

$$= 2(48 + 36) \text{ m} = (2 \times 84) \text{ m} = 168 \text{ m}$$

\therefore Cost of fencing = Rs $(168 \times 30) = \text{Rs } 5040$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q5

Answer :

Given:

Length of the verandah = 40 m = 400 dm [since 1 m = 10 dm]

Breadth of the verandah = 15 m = 150 dm

∴ Area of the verandah = $(400 \times 150) \text{ dm}^2 = 60000 \text{ dm}^2$

Length of a stone = 6 dm

Breadth of a stone = 5 dm

∴ Area of a stone = $(6 \times 5) \text{ dm}^2 = 30 \text{ dm}^2$

∴ Total number of stones needed to pave the verandah = $\frac{\text{Area of the verandah}}{\text{Area of each stone}}$

$$= \left(\frac{60000}{30} \right) = 2000$$

Q6

Answer :

Area of the carpet = Area of the room

$$= (13 \text{ m} \times 9 \text{ m}) = 117 \text{ m}^2$$

Now, width of the carpet = 75 cm (given)

$$= 0.75 \text{ m} \quad [\text{since } 1 \text{ m} = 100 \text{ cm}]$$

$$\text{Length of the carpet} = \left(\frac{\text{Area of the carpet}}{\text{Width of the carpet}} \right) = \left(\frac{117}{0.75} \right) \text{ m} = 156 \text{ m}$$

Rate of carpeting = Rs 105 per m

∴ Total cost of carpeting = Rs $(156 \times 105) = \text{Rs } 16380$

Hence, the total cost of carpeting the room is Rs 16380.

Q7

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Given:

Length of the room = 15 m

Width of the carpet = 75 cm = 0.75 m (since 1 m = 100 cm)

Let the length of the carpet required for carpeting the room be x m.

Cost of the carpet = Rs. 80 per m

\therefore Cost of x m carpet = Rs. $(80 \times x)$ = Rs. $(80x)$

Cost of carpeting the room = Rs. 19200

$$\therefore 80x = 19200 \Rightarrow x = \left(\frac{19200}{80}\right) = 240$$

Thus, the length of the carpet required for carpeting the room is 240 m.

$$\begin{aligned} \text{Area of the carpet required for carpeting the room} &= \text{Length of the carpet} \times \text{Width of the carpet} \\ &= (240 \times 0.75) \text{ m}^2 = 180 \text{ m}^2 \end{aligned}$$

Let the width of the room be b m.

Area to be carpeted = 15 m \times b m = $15b$ m²

$$\therefore 15b \text{ m}^2 = 180 \text{ m}^2$$

$$\Rightarrow b = \left(\frac{180}{15}\right) \text{ m} = 12 \text{ m}$$

Hence, the width of the room is 12 m.

Q8

Answer :

Total cost of fencing a rectangular piece = Rs. 9600

Rate of fencing = Rs. 24

$$\therefore \text{Perimeter of the rectangular field} = \left(\frac{\text{Total cost of fencing}}{\text{Rate of fencing}}\right) \text{ m} = \left(\frac{9600}{24}\right) \text{ m} = 400 \text{ m}$$

Let the length and breadth of the rectangular field be $5x$ and $3x$, respectively.

Perimeter of the rectangular land = $2(5x + 3x) = 16x$

But the perimeter of the given field is 400 m.

$$\therefore 16x = 400$$

$$x = \left(\frac{400}{16}\right) = 25$$

Length of the field = (5×25) m = 125 m

Breadth of the field = (3×25) m = 75 m

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q9

Answer :

$$\begin{aligned}\text{Length of the diagonal of the room} &= \sqrt{l^2 + b^2 + h^2} \\ &= \sqrt{(10)^2 + (10)^2 + (5)^2} \text{ m} \\ &= \sqrt{100 + 100 + 25} \text{ m} \\ &= \sqrt{225} \text{ m} = 15 \text{ m}\end{aligned}$$

Hence, length of the largest pole that can be placed in the given hall is 15 m.

Q10

Answer :

$$\begin{aligned}\text{Side of the square} &= 8.5 \text{ m} \\ \therefore \text{Area of the square} &= (\text{Side})^2 \\ &= (8.5 \text{ m})^2 \\ &= 72.25 \text{ m}^2\end{aligned}$$

Q11

Answer :

$$\begin{aligned}\text{(i) Diagonal of the square} &= 72 \text{ cm} \\ \therefore \text{Area of the square} &= \left[\frac{1}{2} \times (\text{Diagonal})^2 \right] \text{ sq. unit} \\ &= \left[\frac{1}{2} \times (72)^2 \right] \text{ cm}^2 \\ &= 2592 \text{ cm}^2\end{aligned}$$

$$\begin{aligned}\text{(ii) Diagonal of the square} &= 2.4 \text{ m} \\ \therefore \text{Area of the square} &= \left[\frac{1}{2} \times (\text{Diagonal})^2 \right] \text{ sq. unit} \\ &= \left[\frac{1}{2} \times (2.4)^2 \right] \text{ m}^2 \\ &= 2.88 \text{ m}^2\end{aligned}$$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q12**Answer :**

We know:

$$\text{Area of a square} = \left\{ \frac{1}{2} \times (\text{Diagonal})^2 \right\} \text{ sq. units}$$

$$\begin{aligned} \text{Diagonal of the square} &= \sqrt{2 \times \text{Area of square}} \text{ units} \\ &= (\sqrt{2 \times 16200}) \text{ m} = 180 \text{ m} \end{aligned}$$

 \therefore Length of the diagonal of the square = 180 m**Q13****Answer :**

$$\text{Area of the square} = \left\{ \frac{1}{2} \times (\text{Diagonal})^2 \right\} \text{ sq. units}$$

Given:

$$\begin{aligned} \text{Area of the square field} &= \frac{1}{2} \text{ hectare} \\ &= \left(\frac{1}{2} \times 10000 \right) \text{ m}^2 = 5000 \text{ m}^2 \quad [\text{since } 1 \text{ hectare} = 10000 \text{ m}^2] \end{aligned}$$

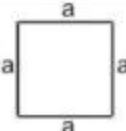

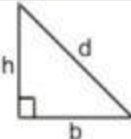

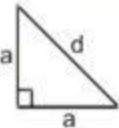

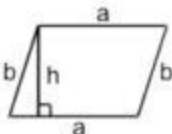

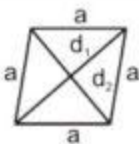

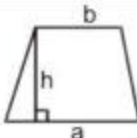

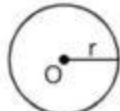

$$\begin{aligned} \text{Diagonal of the square} &= \sqrt{2 \times \text{Area of the square}} \\ &= (\sqrt{2 \times 5000}) \text{ m} = 100 \text{ m} \end{aligned}$$

 \therefore Length of the diagonal of the square field = 100 m

Exercise 20B

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Name	Figure	Perimeter	Area
Rectangle		$2(a + b)$	ab
Square		$4a$	a^2
Triangle		$a + b + c = 2s$	$1 = \frac{1}{2} \times b \times h$ $2 = \sqrt{s(s-a)(s-b)(s-c)}$
Right triangle		$b + h + d$	$\frac{1}{2} bh$
Equilateral triangle		$3a$	1. $\frac{1}{2} ah$ 2. $\frac{\sqrt{3}}{4} a^2$
Isosceles right triangle		$2a + d$	$\frac{1}{2} a^2$
Parallelogram		$2(a + b)$	ah
Rhombus		$4a$	$\frac{1}{2} d_1 d_2$
Trapezium		Sum of its four sides	$\frac{1}{2} h(a + b)$
Circle		$2\pi r$	πr^2
Semicircle		$\pi r + 2r$	$\frac{1}{2} \pi r^2$
Ring (shaded region)		----	$\pi (R^2 - r^2)$

Q1

Answer :

Let PQRS be the given grassy plot and ABCD be the inside boundary of the path.

Length = 75 m

Breadth = 60 m

Area of the plot = $(75 \times 60) \text{ m}^2 = 4500 \text{ m}^2$

Width of the path = 2 m

$\therefore AB = (75 - 2 \times 2) \text{ m} = (75 - 4) \text{ m} = 71 \text{ m}$

$AD = (60 - 2 \times 2) \text{ m} = (60 - 4) \text{ m} = 56 \text{ m}$

Area of rectangle ABCD = $(71 \times 56) \text{ m}^2 = 3976 \text{ m}^2$

Area of the path = (Area of PQRS - Area of ABCD)
 $= (4500 - 3976) \text{ m}^2 = 524 \text{ m}^2$

Rate of constructing the path = Rs 125 per m^2

\therefore Total cost of constructing the path = Rs $(524 \times 125) = \text{Rs } 65,500$

Q2

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let PQRS be the given rectangular plot and ABCD be the inside boundary of the path.

Length = 95 m

Breadth = 72 m

Area of the plot = $(95 \times 72) \text{ m}^2 = 6,840 \text{ m}^2$

Width of the path = 3.5 m

$\therefore AB = (95 - 2 \times 3.5) \text{ m} = (95 - 7) \text{ m} = 88 \text{ m}$

$AD = (72 - 2 \times 3.5) \text{ m} = (72 - 7) \text{ m} = 65 \text{ m}$

Area of the path = (Area PQRS - Area ABCD)
 $= (6840 - 5720) \text{ m}^2 = 1,120 \text{ m}^2$

Rate of constructing the path = Rs. 80 per m^2

\therefore Total cost of constructing the path = Rs. $(1,120 \times 80) = \text{Rs. } 89,600$

Rate of laying the grass on the plot ABCD = Rs. 40 per m^2

\therefore Total cost of laying the grass on the plot = Rs. $(5,720 \times 40) = \text{Rs. } 2,28,800$

\therefore Total expenses involved = Rs. $(89,600 + 2,28,800) = \text{Rs. } 3,18,400$

Q3

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let ABCD be the saree and EFGH be the part of saree without border.

Length, AB = 5 m

Breadth, BC = 1.3 m

Width of the border of the saree = 25 cm = 0.25 m

$$\therefore \text{Area of ABCD} = 5 \text{ m} \times 1.3 \text{ m} = 6.5 \text{ m}^2$$

$$\text{Length, GH} = \{5 - (0.25 + 0.25)\} \text{ m} = 4.5 \text{ m}$$

$$\text{Breadth, FG} = \{1.3 - 0.25 + 0.25\} \text{ m} = 0.8 \text{ m}$$

$$\therefore \text{Area of EFGH} = 4.5 \text{ m} \times 0.8 \text{ m} = 3.6 \text{ m}^2$$

$$\text{Area of the border} = \text{Area of ABCD} - \text{Area of EFGH}$$

$$= 6.5 \text{ m}^2 - 3.6 \text{ m}^2$$

$$= 2.9 \text{ m}^2 = 29000 \text{ cm}^2 \quad [\text{since } 1 \text{ m}^2 = 10000 \text{ cm}^2]$$

$$\text{Rate of printing the border} = \text{Rs } 1 \text{ per } 10 \text{ cm}^2$$

$$\therefore \text{Total cost of printing the border} = \text{Rs } \left(\frac{1 \times 29000}{10} \right)$$

$$= \text{Rs } 2900$$

Q4

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Length, EF = 38 m

Breadth, FG = 25 m

$$\therefore \text{Area of EFGH} = 38 \text{ m} \times 25 \text{ m} = 950 \text{ m}^2$$

$$\text{Length, AB} = (38 + 2.5 + 2.5) \text{ m} = 43 \text{ m}$$

$$\text{Breadth, BC} = (25 + 2.5 + 2.5) \text{ m} = 30 \text{ m}$$

$$\therefore \text{Area of ABCD} = 43 \text{ m} \times 30 \text{ m} = 1290 \text{ m}^2$$

$$\begin{aligned} \text{Area of the path} &= \text{Area of ABCD} - \text{Area of PQRS} \\ &= 1290 \text{ m}^2 - 950 \text{ m}^2 \\ &= 340 \text{ m}^2 \end{aligned}$$

$$\text{Rate of gravelling the path} = \text{Rs } 120 \text{ per m}^2$$

$$\begin{aligned} \therefore \text{Total cost of gravelling the path} &= \text{Rs } (120 \times 340) \\ &= \text{Rs } 40800 \end{aligned}$$

Q5

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let EFGH denote the floor of the room.

The white region represents the floor of the 1.25 m verandah.

Length, EF = 9.5 m

Breadth, FG = 6 m

$$\therefore \text{Area of EFGH} = 9.5 \text{ m} \times 6 \text{ m} = 57 \text{ m}^2$$

$$\text{Length, AB} = (9.5 + 1.25 + 1.25) \text{ m} = 12 \text{ m}$$

$$\text{Breadth, BC} = (6 + 1.25 + 1.25) \text{ m} = 8.5 \text{ m}$$

$$\therefore \text{Area of ABCD} = 12 \text{ m} \times 8.5 \text{ m} = 102 \text{ m}^2$$

$$\begin{aligned} \text{Area of the verandah} &= \text{Area of ABCD} - \text{Area of EFGH} \\ &= 102 \text{ m}^2 - 57 \text{ m}^2 \\ &= 45 \text{ m}^2 \end{aligned}$$

$$\text{Rate of cementing the verandah} = \text{Rs } 80 \text{ per m}^2$$

$$\begin{aligned} \therefore \text{Total cost of cementing the verandah} &= \text{Rs } (80 \times 45) \\ &= \text{Rs } 3600 \end{aligned}$$

Q6

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Side of the flower bed = 2 m 80 cm = 2.80 m [since 100 cm = 1 m]

\therefore Area of the square flower bed = (Side)² = (2.80 m)² = 7.84 m²

Side of the flower bed with the digging strip = 2.80 m + 30 cm + 30 cm

$$= (2.80 + 0.3 + 0.3) \text{ m} = 3.4 \text{ m}$$

Area of the enlarged flower bed with the digging strip = (Side)² = (3.4)² = 11.56 m²

\therefore Increase in the area of the flower bed = 11.56 m² - 7.84 m²
= 3.72 m²

Q7

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let the length and the breadth of the park be $2x$ m and x m, respectively.

Perimeter of the park = $2(2x + x) = 240$ m

$$\Rightarrow 2(2x + x) = 240$$

$$\Rightarrow 6x = 240$$

$$\Rightarrow x = \left(\frac{240}{6}\right) \text{ m} = 40 \text{ m}$$

$$\therefore \text{Length of the park} = 2x = (2 \times 40) = 80 \text{ m}$$

$$\text{Breadth} = x = 40 \text{ m}$$

Let PQRS be the given park and ABCD be the inside boundary of the path.

Length = 80 m

Breadth = 40 m

$$\text{Area of the park} = (80 \times 40) \text{ m}^2 = 3200 \text{ m}^2$$

Width of the path = 2 m

$$\therefore AB = (80 - 2 \times 2) \text{ m} = (80 - 4) \text{ m} = 76 \text{ m}$$

$$AD = (40 - 2 \times 2) \text{ m} = (40 - 4) \text{ m} = 36 \text{ m}$$

$$\text{Area of the rectangle ABCD} = (76 \times 36) \text{ m}^2 = 2736 \text{ m}^2$$

$$\begin{aligned} \text{Area of the path} &= (\text{Area of PQRS} - \text{Area of ABCD}) \\ &= (3200 - 2736) \text{ m}^2 = 464 \text{ m}^2 \end{aligned}$$

Rate of paving the path = Rs. 80 per m^2

$$\therefore \text{Total cost of paving the path} = \text{Rs. } (464 \times 80) = \text{Rs. } 37,120$$

Q8

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Length of the hall, PQ = 22 m

Breadth of the hall, QR = 15.5 m

$$\therefore \text{Area of the school hall PQRS} = 22 \text{ m} \times 15.5 \text{ m} = 341 \text{ m}^2$$

$$\text{Length of the carpet, AB} = 22 \text{ m} - (0.75 \text{ m} + 0.75 \text{ m}) = 20.5 \text{ m} \quad [\text{since } 100 \text{ cm} = 1 \text{ m}]$$

$$\text{Breadth of the carpet, BC} = 15.5 \text{ m} - (0.75 \text{ m} + 0.75 \text{ m}) = 14 \text{ m}$$

$$\therefore \text{Area of the carpet ABCD} = 20.5 \text{ m} \times 14 \text{ m} = 287 \text{ m}^2$$

$$\begin{aligned} \text{Area of the strip} &= \text{Area of the school hall (PQRS)} - \text{Area of the carpet (ABCD)} \\ &= 341 \text{ m}^2 - 287 \text{ m}^2 \\ &= 54 \text{ m}^2 \end{aligned}$$

$$\text{Area of 1 m length of the carpet} = 1 \text{ m} \times 0.82 \text{ m} = 0.82 \text{ m}^2$$

$$\therefore \text{Length of the carpet whose area is } 287 \text{ m}^2 = 287 \text{ m}^2 \div 0.82 \text{ m}^2 = 350 \text{ m}$$

$$\text{Cost of the 350 m long carpet} = \text{Rs } 60 \times 350 = \text{Rs } 21000$$

Q9

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let ABCD be the square lawn and PQRS be the outer boundary of the square path.

Let a side of the lawn (AB) be x m.

Area of the square lawn = x^2

Length, PQ = $(x \text{ m} + 2.5 \text{ m} + 2.5 \text{ m}) = (x + 5) \text{ m}$

\therefore Area of PQRS = $(x + 5)^2 = (x^2 + 10x + 25) \text{ m}^2$

Area of the path = Area of PQRS – Area of the square lawn (ABCD)

$$\Rightarrow 165 = x^2 + 10x + 25 - x^2$$

$$\Rightarrow 165 = 10x + 25$$

$$\Rightarrow 165 - 25 = 10x$$

$$\Rightarrow 140 = 10x$$

$$\therefore x = 140 \div 10 = 14$$

\therefore Side of the lawn = 14 m

\therefore Area of the lawn = $(\text{Side})^2 = (14 \text{ m})^2 = 196 \text{ m}^2$

Q10

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Area of the path = 305 m²

Let the length of the park be $5x$ m and the breadth of the park be $2x$ m.

$$\therefore \text{Area of the rectangular park} = 5x \times 2x = 10x^2 \text{ m}^2$$

Width of the path = 2.5 m

$$\text{Outer length, } PQ = 5x \text{ m} + 2.5 \text{ m} + 2.5 \text{ m} = (5x + 5) \text{ m}$$

$$\text{Outer breadth, } QR = 2x + 2.5 \text{ m} + 2.5 \text{ m} = (2x + 5) \text{ m}$$

$$\text{Area of } PQRS = (5x + 5) \times (2x + 5) = (10x^2 + 25x + 10x + 25) = (10x^2 + 35x + 25) \text{ m}^2$$

$$\therefore \text{Area of the path} = [(10x^2 + 35x + 25) - 10x^2] \text{ m}^2$$

$$\Rightarrow 305 = 35x + 25$$

$$\Rightarrow 305 - 25 = 35x$$

$$\Rightarrow 280 = 35x$$

$$\Rightarrow x = 280 \div 35 = 8$$

$$\therefore \text{Length of the park} = 5x = 5 \times 8 = 40 \text{ m}$$

$$\text{Breadth of the park} = 2x = 2 \times 8 = 16 \text{ m}$$

Q11

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let $ABCD$ be the rectangular park.

Let $EFGH$ and $IJKL$ be the two rectangular roads with width 5 m.

Length of the rectangular park, $AD = 70$ m

Breadth of the rectangular park, $CD = 50$ m

\therefore Area of the rectangular park = Length \times Breadth = 70 m \times 50 m = 3500 m²

Area of road $EFGH = 70$ m \times 5 m = 350 m²

Area of road $IJKL = 50$ m \times 5 m = 250 m²

Clearly, area of $MNOP$ is common to both the two roads.

\therefore Area of $MNOP = 5$ m \times 5 m = 25 m²

Area of the roads = Area ($EFGH$) + Area ($IJKL$) - Area ($MNOP$)

$$= (350 + 250) \text{ m}^2 - 25 \text{ m}^2 = 575 \text{ m}^2$$

It is given that the cost of constructing the roads is Rs. $120/\text{m}^2$.

Cost of constructing 575 m² area of the roads = Rs. (120×575)

$$= \text{Rs. } 69000$$

Q12

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let ABCD be the rectangular field and PQRS and KLMN be the two rectangular roads with width 2 m and 2.5 m, respectively.

Length of the rectangular field, $CD = 115 \text{ m}$

Breadth of the rectangular field, $BC = 64 \text{ m}$

\therefore Area of the rectangular lawn ABCD = $115 \text{ m} \times 64 \text{ m} = 7360 \text{ m}^2$

Area of the road PQRS = $115 \text{ m} \times 2 \text{ m} = 230 \text{ m}^2$

Area of the road KLMN = $64 \text{ m} \times 2.5 \text{ m} = 160 \text{ m}^2$

Clearly, the area of EFGH is common to both the two roads.

\therefore Area of EFGH = $2 \text{ m} \times 2.5 \text{ m} = 5 \text{ m}^2$

\therefore Area of the roads = Area (KLMN) + Area (PQRS) – Area (EFGH)
 $= (230 \text{ m}^2 + 160 \text{ m}^2) - 5 \text{ m}^2 = 385 \text{ m}^2$

Rate of gravelling the roads = Rs 60 per m^2

\therefore Total cost of gravelling the roads = Rs (385×60)
 $= \text{Rs } 23,100$

Q13

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let ABCD be the rectangular field and KLMN and PQRS be the two rectangular roads with width 2.5 m and 2 m, respectively.

Length of the rectangular field CD = 50 m

Breadth of the rectangular field BC = 40 m

\therefore Area of the rectangular field ABCD = 50 m \times 40 m = 2000 m²

Area of road KLMN = 40 m \times 2.5 m = 100 m²

Area of road PQRS = 50 m \times 2 m = 100 m²

Clearly, area of EFGH is common to both the two roads.

\therefore Area of EFGH = 2.5 m \times 2 m = 5 m²

\therefore Area of the roads = Area (KLMN) + Area (PQRS) – Area (EFGH)
 = (100 m² + 100 m²) – 5 m² = 195 m²

Area of the remaining portion of the field = Area of the rectangular field (ABCD) – Area of the roads
 = (2000 – 195) m²
 = 1805 m²

Q14

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

(i) Complete the rectangle as shown below:

$$\begin{aligned}
 \text{Area of the shaded region} &= [\text{Area of rectangle ABCD} - \text{Area of rectangle EFGH}] \text{ sq. units} \\
 &= [(43 \text{ m} \times 27 \text{ m}) - \{(43 - 2 \times 1.5) \text{ m} \times (27 - 1 \times 2) \text{ m}\}] \\
 &= [(43 \text{ m} \times 27 \text{ m}) - \{40 \text{ m} \times 25 \text{ m}\}] \\
 &= 1161 \text{ m}^2 - 1000 \text{ m}^2 \\
 &= 161 \text{ m}^2
 \end{aligned}$$

(ii) Complete the rectangle as shown below:

$$\begin{aligned}
 \text{Area of the shaded region} &= [\text{Area of square ABCD} - \{(\text{Area of EFGH}) + (\text{Area of IJKL}) - (\text{Area of MNOP})\}] \text{ sq. units} \\
 &= [(40 \times 40) - \{(40 \times 2) + (40 \times 3) - (2 \times 3)\}] \text{ m}^2 \\
 &= [1600 - \{(80 + 120 - 6)\}] \text{ m}^2 \\
 &= [1600 - 194] \text{ m}^2 \\
 &= 1406 \text{ m}^2
 \end{aligned}$$

Q15

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

(i) Complete the rectangle as shown below:

$$\begin{aligned}
 \text{Area of the shaded region} &= [\text{Area of rectangle } ABCD - \text{Area of rectangle } EFGD] \text{ sq. units} \\
 &= [(AB \times BC) - (DG \times GF)] \text{ m}^2 \\
 &= [(24 \text{ m} \times 19 \text{ m}) - \{(24 - 4) \text{ m} \times 16.5 \text{ m}\}] \\
 &= [(24 \text{ m} \times 19 \text{ m}) - (20 \text{ m} \times 16.5 \text{ m})] \\
 &= (456 - 330) \text{ m}^2 = 126 \text{ m}^2
 \end{aligned}$$

(ii) Complete the rectangle by drawing lines as shown below:

$$\begin{aligned}
 \text{Area of the shaded region} &= \{(12 \times 3) + (12 \times 3) + (5 \times 3) + \{(15 - 3 - 3) \times 3\}\} \text{ cm}^2 \\
 &= \{36 + 36 + 15 + 27\} \text{ cm}^2 \\
 &= 114 \text{ cm}^2
 \end{aligned}$$

Q16

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Divide the given figure in four parts shown below:

Given:

Width of each part = 0.5 m

Now, we have to find the length of each part.

Length of part I = 3.5 m

Length of part II = $(3.5 - 0.5 - 0.5)$ m = 2.5 m

Length of part III = $(2.5 - 0.5 - 0.5)$ = 1.5 m

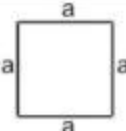

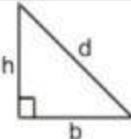

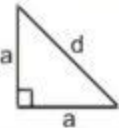

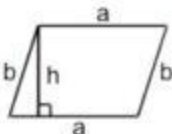

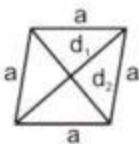

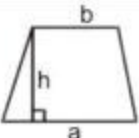

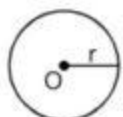

Length of part IV = $(1.5 - 0.5 - 0.5)$ = 0.5 m

∴ Area of the shaded region = [Area of part (I) + Area of part (II) + Area of part (III) + Area of part (IV)] sq. units

$$\begin{aligned} &= [(3.5 \times 0.5) + (2.5 \times 0.5) + (1.5 \times 0.5) + (0.5 \times 0.5)] \text{ m}^2 \\ &= [1.75 + 1.25 + 0.75 + 0.25] \text{ m}^2 \\ &= 4 \text{ m}^2 \end{aligned}$$

Exercise 20C

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Name	Figure	Perimeter	Area
Rectangle		$2(a + b)$	ab
Square		$4a$	a^2
Triangle		$a + b + c = 2s$	$1 = \frac{1}{2} \times b \times h$ $2 = \sqrt{s(s-a)(s-b)(s-c)}$
Right triangle		$b + h + d$	$\frac{1}{2} bh$
Equilateral triangle		$3a$	1. $\frac{1}{2} ah$ 2. $\frac{\sqrt{3}}{4} a^2$
Isosceles right triangle		$2a + d$	$\frac{1}{2} a^2$
Parallelogram		$2(a + b)$	ah
Rhombus		$4a$	$\frac{1}{2} d_1 d_2$
Trapezium		Sum of its four sides	$\frac{1}{2} h(a + b)$
Circle		$2\pi r$	πr^2
Semicircle		$\pi r + 2r$	$\frac{1}{2} \pi r^2$
Ring (shaded region)		----	$\pi (R^2 - r^2)$

Q1

Answer :

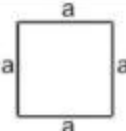

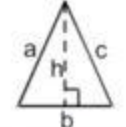

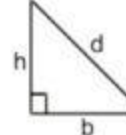

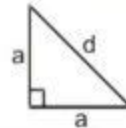

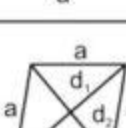

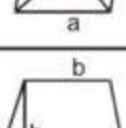

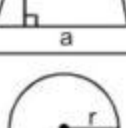

Base = 32 cm

Height = 16.5 cm

$$\begin{aligned}\therefore \text{Area of the parallelogram} &= \text{Base} \times \text{Height} \\ &= 32 \text{ cm} \times 16.5 \text{ cm} \\ &= 528 \text{ cm}^2\end{aligned}$$

Exercise 20D

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Name	Figure	Perimeter	Area
Rectangle		$2(a + b)$	ab
Square		$4a$	a^2
Triangle		$a + b + c = 2s$	$1 = \frac{1}{2} \times b \times h$ $2 = \sqrt{s(s-a)(s-b)(s-c)}$
Right triangle		$b + h + d$	$\frac{1}{2} bh$
Equilateral triangle		$3a$	1. $\frac{1}{2} ah$ 2. $\frac{\sqrt{3}}{4} a^2$
Isosceles right triangle		$2a + d$	$\frac{1}{2} a^2$
Parallelogram		$2(a + b)$	ah
Rhombus		$4a$	$\frac{1}{2} d_1 d_2$
Trapezium		Sum of its four sides	$\frac{1}{2} h(a + b)$
Circle		$2\pi r$	πr^2
Semicircle		$\pi r + 2r$	$\frac{1}{2} \pi r^2$
Ring (shaded region)		----	$\pi (R^2 - r^2)$

Q1

Answer :

We know:

Area of a triangle = $\frac{1}{2} \times \text{Base} \times \text{Height}$

(i) Base = 42 cm

Height = 25 cm

$$\therefore \text{Area of the triangle} = \left(\frac{1}{2} \times 42 \times 25 \right) \text{ cm}^2 = 525 \text{ cm}^2$$

(ii) Base = 16.8 m

Height = 75 cm = 0.75 m [since 100 cm = 1 m]

$$\therefore \text{Area of the triangle} = \left(\frac{1}{2} \times 16.8 \times 0.75 \right) \text{ m}^2 = 6.3 \text{ m}^2$$

(iii) Base = 8 dm = (8 × 10) cm = 80 cm [since 1 dm = 10 cm]

Height = 35 cm

$$\therefore \text{Area of the triangle} = \left(\frac{1}{2} \times 80 \times 35 \right) \text{ cm}^2 = 1400 \text{ cm}^2$$

Exercise 20E

Area of a circle
= $\pi \times \text{radius}^2$

Circumference of a
circle = $\pi \times \text{diameter}$

remember that the
diameter = 2 x radius

<https://www.youtube.com/embed/O-cawByg2aA?feature=oembed>

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q1

Answer :

Here, $r = 15$ cm

$$\begin{aligned}\therefore \text{Circumference} &= 2\pi r \\ &= (2 \times 3.14 \times 15) \text{ cm} \\ &= 94.2 \text{ cm}\end{aligned}$$

Hence, the circumference of the given circle is 94.2 cm

Q2

Answer :

(i) Here, $r = 28$ cm

$$\begin{aligned}\therefore \text{Circumference} &= 2\pi r \\ &= \left(2 \times \frac{22}{7} \times 28\right) \text{ cm} \\ &= 176 \text{ cm}\end{aligned}$$

Hence, the circumference of the given circle is 176 cm.

(ii) Here, $r = 1.4$ m

$$\begin{aligned}\therefore \text{Circumference} &= 2\pi r \\ &= \left(2 \times \frac{22}{7} \times 1.4\right) \text{ m} \\ &= (2 \times 22 \times 0.2) \text{ m} = 8.8 \text{ m}\end{aligned}$$

Hence, the circumference of the given circle is 8.8 m.

Q3

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

(i) Here, $d = 35$ cm

$$\begin{aligned}\text{Circumference} &= 2\pi r \\ &= (\pi d) \quad [\text{since } 2r = d] \\ &= \left(\frac{22}{7} \times 35\right) \text{ cm} = (22 \times 5) = 110 \text{ cm}\end{aligned}$$

Hence, the circumference of the given circle is 110 cm.

(ii) Here, $d = 4.9$ m

$$\begin{aligned}\text{Circumference} &= 2\pi r \\ &= (\pi d) \quad [\text{since } 2r = d] \\ &= \left(\frac{22}{7} \times 4.9\right) \text{ m} = (22 \times 0.7) = 15.4 \text{ m}\end{aligned}$$

Hence, the circumference of the given circle is 15.4 m.

Q4

Answer :

Circumference of the given circle = 57.2 cm

$\therefore C = 57.2$ cm

Let the radius of the given circle be r cm.

$$C = 2\pi r$$

$$\Rightarrow r = \frac{C}{2\pi} \text{ cm}$$

$$\Rightarrow r = \left(\frac{57.2}{2} \times \frac{7}{22}\right) \text{ cm} = 9.1 \text{ cm}$$

Thus, radius of the given circle is 9.1 cm.

Q5

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Circumference of the given circle = 63.8 m

$$\therefore C = 63.8 \text{ m}$$

Let the radius of the given circle be r cm.

$$C = 2\pi r$$

$$\Rightarrow r = \frac{C}{2\pi}$$

$$\Rightarrow r = \left(\frac{63.8}{2} \times \frac{7}{22} \right) \text{ m} = 10.15 \text{ m}$$

$$\therefore \text{Diameter of the given circle} = 2r = (2 \times 10.15) \text{ m} = 20.3 \text{ m}$$

Answer :

Let the inner and outer radii of the track be r metres and R metres, respectively.

$$\text{Then, } 2\pi r = 528$$

$$2\pi R = 616$$

$$\Rightarrow 2 \times \frac{22}{7} \times r = 528$$

$$2 \times \frac{22}{7} \times R = 616$$

$$\Rightarrow r = \left(528 \times \frac{7}{44} \right) = 84$$

$$R = \left(616 \times \frac{7}{44} \right) = 98$$

$$\Rightarrow (R - r) = (98 - 84) \text{ m} = 14 \text{ m}$$

Hence, the width of the track is 14 m.

Q10

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let the inner and outer radii of the track be r metres and $(r + 10.5)$ metres, respectively.

Inner circumference = 330 m

$$\begin{aligned}\therefore 2\pi r &= 330 \Rightarrow 2 \times \frac{22}{7} \times r = 330 \\ \Rightarrow r &= \left(330 \times \frac{7}{44}\right) = 52.5 \text{ m}\end{aligned}$$

Inner radius of the track = 52.5 m

\therefore Outer radii of the track = $(52.5 + 10.5)$ m = 63 m

$$\therefore \text{Circumference of the outer circle} = \left(2 \times \frac{22}{7} \times 63\right) \text{ m} = 396 \text{ m}$$

Rate of fencing = Rs. 20 per metre

\therefore Total cost of fencing the outer circle = Rs. (396×20) = Rs. 7920

Q11

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

We know that the concentric circles are circles that form within each other, around a common centre point.

Radius of the inner circle, $r = 98$ cm

$$\begin{aligned}\therefore \text{Circumference of the inner circle} &= 2\pi r \\ &= \left(2 \times \frac{22}{7} \times 98\right) \text{ cm} = 616 \text{ cm}\end{aligned}$$

Radius of the outer circle, $R = 1 \text{ m } 26 \text{ cm} = 126 \text{ cm}$ [since 1 m = 100 cm]

$$\begin{aligned}\therefore \text{Circumference of the outer circle} &= 2\pi R \\ &= \left(2 \times \frac{22}{7} \times 126\right) \text{ cm} = 792 \text{ cm}\end{aligned}$$

\therefore Difference in the lengths of the circumference of the circles = $(792 - 616) \text{ cm} = 176 \text{ cm}$

Hence, the circumference of the second circle is 176 cm larger than that of the first circle.

Q12

Answer :

Length of the wire = Perimeter of the equilateral triangle

$$= 3 \times \text{Side of the equilateral triangle} = (3 \times 8.8) \text{ cm} = 26.4 \text{ cm}$$

Let the wire be bent into the form of a circle of radius r cm.

Circumference of the circle = 26.4 cm

$$\Rightarrow 2\pi r = 26.4$$

$$\Rightarrow 2 \times \frac{22}{7} \times r = 26.4$$

$$\Rightarrow r = \left(\frac{26.4 \times 7}{2 \times 22}\right) \text{ cm} = 4.2 \text{ cm}$$

\therefore Diameter = $2r = (2 \times 4.2) \text{ cm} = 8.4 \text{ cm}$

Hence, the diameter of the ring is 8.4 cm.

Q13

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

$$\begin{aligned}\text{Circumference of the circle} &= \text{Perimeter of the rhombus} \\ &= 4 \times \text{Side of the rhombus} = (4 \times 33) \text{ cm} = 132 \text{ cm}\end{aligned}$$

\therefore Circumference of the circle = 132 cm

$$\Rightarrow 2\pi r = 132$$

$$\Rightarrow 2 \times \frac{22}{7} \times r = 132$$

$$\Rightarrow r = \left(\frac{132 \times 7}{2 \times 22} \right) \text{ cm} = 21 \text{ cm}$$

Hence, the radius of the circle is 21 cm.

Q14

Answer :

$$\begin{aligned}\text{Length of the wire} &= \text{Perimeter of the rectangle} \\ &= 2(l + b) = 2 \times (18.7 + 14.3) \text{ cm} = 66 \text{ cm}\end{aligned}$$

Let the wire be bent into the form of a circle of radius r cm.

Circumference of the circle = 66 cm

$$\Rightarrow 2\pi r = 66$$

$$\Rightarrow \left(2 \times \frac{22}{7} \times r \right) = 66$$

$$\Rightarrow r = \left(\frac{66 \times 7}{2 \times 22} \right) \text{ cm} = 10.5 \text{ cm}$$

Hence, the radius of the circle formed is 10.5 cm.

Q15

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

It is given that the radius of the circle is 35 cm.

Length of the wire = Circumference of the circle

$$\Rightarrow \text{Circumference of the circle} = 2\pi r = \left(2 \times \frac{22}{7} \times 35\right) \text{ cm} = 220 \text{ cm}$$

Let the wire be bent into the form of a square of side a cm.

Perimeter of the square = 220 cm

$$\Rightarrow 4a = 220$$

$$\Rightarrow a = \left(\frac{220}{4}\right) \text{ cm} = 55 \text{ cm}$$

Hence, each side of the square will be 55 cm.

Q16

Answer :

Length of the hour hand (r) = 4.2 cm.

$$\text{Distance covered by the hour hand in 12 hours} = 2\pi r = \left(2 \times \frac{22}{7} \times 4.2\right) \text{ cm} = 26.4 \text{ cm}$$

$$\therefore \text{Distance covered by the hour hand in 24 hours} = (2 \times 26.4) = 52.8 \text{ cm}$$

Length of the minute hand (R) = 7 cm

$$\text{Distance covered by the minute hand in 1 hour} = 2\pi R = \left(2 \times \frac{22}{7} \times 7\right) \text{ cm} = 44 \text{ cm}$$

$$\therefore \text{Distance covered by the minute hand in 24 hours} = (44 \times 24) \text{ cm} = 1056 \text{ cm}$$

$$\begin{aligned} \therefore \text{Sum of the distances covered by the tips of both the hands in 1 day} &= (52.8 + 1056) \text{ cm} \\ &= 1108.8 \text{ cm} \end{aligned}$$

Q17

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Given:

Diameter of the well (d) = 140 cm.

Radius of the well (r) = $\left(\frac{140}{2}\right)$ cm = 70 cm

Let the radius of the outer circle (including the stone parapet) be R cm.

Length of the outer edge of the parapet = 616 cm

$$\Rightarrow 2\pi R = 616$$

$$\Rightarrow \left(2 \times \frac{22}{7} \times R\right) = 616$$

$$\Rightarrow R = \left(\frac{616 \times 7}{2 \times 22}\right) \text{ cm} = 98 \text{ cm}$$

Now, width of the parapet = {Radius of the outer circle (including the stone parapet) - Radius of the well}

$$= \{98 - 70\} \text{ cm} = 28 \text{ cm}$$

Hence, the width of the parapet is 28 cm.

Q18

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

It may be noted that in one rotation, the bus covers a distance equal to the circumference of the wheel.

Now, diameter of the wheel = 98 cm

$$\therefore \text{Circumference of the wheel} = \pi d = \left(\frac{22}{7} \times 98\right) \text{ cm} = 308 \text{ cm}$$

Thus, the bus travels 308 cm in one rotation.

$$\begin{aligned} \therefore \text{Distance covered by the bus in 2000 rotations} &= (308 \times 2000) \text{ cm} \\ &= 616000 \text{ cm} \\ &= 6160 \text{ m} \quad [\text{since } 1 \text{ m} = 100 \text{ cm}] \end{aligned}$$

Q19

Answer :

It may be noted that in one revolution, the cycle covers a distance equal to the circumference of the wheel.

Diameter of the wheel = 70 cm

$$\therefore \text{Circumference of the wheel} = \pi d = \left(\frac{22}{7} \times 70\right) \text{ cm} = 220 \text{ cm}$$

Thus, the cycle covers 220 cm in one revolution.

$$\begin{aligned} \therefore \text{Distance covered by the cycle in 250 revolutions} &= (220 \times 250) \text{ cm} \\ &= 55000 \text{ cm} \\ &= 550 \text{ m} \quad [\text{since } 1 \text{ m} = 100 \text{ cm}] \end{aligned}$$

Hence, the cycle will cover 550 m in 250 revolutions.

Q20

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Diameter of the wheel = 77 cm

⇒ Radius of the wheel = $\left(\frac{77}{2}\right)$ cm

Circumference of the wheel = $2\pi r$

$$= \left(2 \times \frac{22}{7} \times \frac{77}{2}\right) \text{ cm} = (22 \times 11) \text{ cm} = 242 \text{ cm}$$

$$= \left(\frac{242}{100}\right) \text{ m} = \left(\frac{121}{50}\right) \text{ m}$$

Distance covered by the wheel in 1 revolution = $\left(\frac{121}{50}\right)$ m

Now, $\left(\frac{121}{50}\right)$ m is covered by the car in 1 revolution.

(121 × 1000) m will be covered by the car in $\left(1 \times \frac{50}{121} \times 121 \times 1000\right)$ revolutions, i.e. 50000 revolutions.

∴ Required number of revolutions = 50000

Q21

Answer :

It may be noted that in one revolution, the bicycle covers a distance equal to the circumference of the wheel.

Total distance covered by the bicycle in 5000 revolutions = 11 km

$$\Rightarrow 5000 \times \text{Circumference of the wheel} = 11000 \text{ m} \quad [\text{since } 1 \text{ km} = 1000 \text{ m}]$$

$$\text{Circumference of the wheel} = \left(\frac{11000}{5000}\right) \text{ m} = 2.2 \text{ m} = 220 \text{ cm} \quad [\text{since } 1 \text{ m} = 100 \text{ cm}]$$

Circumference of the wheel = $\pi \times \text{Diameter of the wheel}$

$$\Rightarrow 220 \text{ cm} = \frac{22}{7} \times \text{Diameter of the wheel}$$

$$\Rightarrow \text{Diameter of the wheel} = \left(\frac{220 \times 7}{22}\right) \text{ cm} = 70 \text{ cm}$$

Hence, the circumference of the wheel is 220 cm and its diameter is 70 cm.

Exercise 20F

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Area of a circle
 $= \pi \times \text{radius}^2$

Circumference of a
circle $= \pi \times \text{diameter}$

remember that the
diameter = 2 x radius

<https://www.youtube.com/embed/O-cawByg2aA?feature=oembed>

Q1

Answer :

(i) Given:

$$r = 21 \text{ cm}$$

$$\begin{aligned} \therefore \text{Area of the circle} &= (\pi r^2) \text{ sq. units} \\ &= \left(\frac{22}{7} \times 21 \times 21\right) \text{ cm}^2 = (22 \times 3 \times 21) \text{ cm}^2 = 1386 \text{ cm}^2 \end{aligned}$$

(ii) Given:

$$r = 3.5 \text{ m}$$

$$\begin{aligned} \text{Area of the circle} &= (\pi r^2) \text{ sq. units} \\ &= \left(\frac{22}{7} \times 3.5 \times 3.5\right) \text{ m}^2 = (22 \times 0.5 \times 3.5) \text{ m}^2 = 38.5 \text{ m}^2 \end{aligned}$$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q2

Answer :

(i) Given:

$$d = 28 \text{ cm} \Rightarrow r = \left(\frac{d}{2}\right) = \left(\frac{28}{2}\right) \text{ cm} = 14 \text{ cm}$$

$$\text{Area of the circle} = (\pi r^2) \text{ sq. units}$$

$$= \left(\frac{22}{7} \times 14 \times 14\right) \text{ cm}^2 = (22 \times 2 \times 14) \text{ cm}^2 = 616 \text{ cm}^2$$

(ii) Given:

$$r = 1.4 \text{ m} \Rightarrow r = \left(\frac{d}{2}\right) = \left(\frac{1.4}{2}\right) \text{ m} = 0.7 \text{ m}$$

$$\text{Area of the circle} = (\pi r^2) \text{ sq. units}$$

$$= \left(\frac{22}{7} \times 0.7 \times 0.7\right) \text{ m}^2 = (22 \times 0.1 \times 0.7) \text{ m}^2 = 1.54 \text{ m}^2$$

Q3

Answer :

Let the radius of the circle be r cm.

$$\text{Circumference} = (2\pi r) \text{ cm}$$

$$\therefore (2\pi r) = 264$$

$$\Rightarrow \left(2 \times \frac{22}{7} \times r\right) = 264$$

$$\Rightarrow r = \left(\frac{264 \times 7}{2 \times 22}\right) = 42$$

$$\therefore \text{Area of the circle} = \pi r^2$$

$$= \left(\frac{22}{7} \times 42 \times 42\right) \text{ cm}^2$$

$$= 5544 \text{ cm}^2$$

Q4

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let the radius of the circle be r m.

Then, its circumference will be $(2\pi r)$ m.

$$\therefore (2\pi r) = 35.2$$

$$\Rightarrow \left(2 \times \frac{22}{7} \times r\right) = 35.2$$

$$\Rightarrow r = \left(\frac{35.2 \times 7}{2 \times 22}\right) = 5.6$$

$$\begin{aligned}\therefore \text{Area of the circle} &= \pi r^2 \\ &= \left(\frac{22}{7} \times 5.6 \times 5.6\right) \text{ m}^2 = 98.56 \text{ m}^2\end{aligned}$$

Q5

Answer :

Let the radius of the circle be r cm.

Then, its area will be πr^2 cm².

$$\therefore \pi r^2 = 616$$

$$\Rightarrow \left(\frac{22}{7} \times r \times r\right) = 616$$

$$\Rightarrow r^2 = \left(\frac{616 \times 7}{22}\right) = 196$$

$$\Rightarrow r = \sqrt{196} = 14$$

$$\begin{aligned}\Rightarrow \text{Circumference of the circle} &= (2\pi r) \text{ cm} \\ &= \left(2 \times \frac{22}{7} \times 14\right) \text{ cm} = 88 \text{ cm}\end{aligned}$$

Q6

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let the radius of the circle be r m.

Then, area = πr^2 m²

$$\therefore \pi r^2 = 1386$$

$$\Rightarrow \left(\frac{22}{7} \times r \times r\right) = 1386$$

$$\Rightarrow r^2 = \left(\frac{1386 \times 7}{22}\right) = 441$$

$$\Rightarrow r = \sqrt{441} = 21$$

$$\begin{aligned}\Rightarrow \text{Circumference of the circle} &= (2\pi r) \text{ m} \\ &= \left(2 \times \frac{22}{7} \times 21\right) \text{ m} = 132 \text{ m}\end{aligned}$$

Q7

Answer :

Let r_1 and r_2 be the radii of the two given circles and A_1 and A_2 be their respective areas.

$$\frac{r_1}{r_2} = \frac{4}{5}$$

$$\therefore \frac{A_1}{A_2} = \frac{\pi r_1^2}{\pi r_2^2} = \frac{r_1^2}{r_2^2} = \left(\frac{r_1}{r_2}\right)^2 = \left(\frac{4}{5}\right)^2 = \frac{16}{25}$$

Hence, the ratio of the areas of the given circles is 16:25.

Q8

Answer :

If the horse is tied to a pole, then the pole will be the central point and the area over which the horse will graze will be a circle. The string by which the horse is tied will be the radius of the circle.

Thus,

Radius of the circle (r) = Length of the string = 21 m

$$\text{Now, area of the circle} = \pi r^2 = \left(\frac{22}{7} \times 21 \times 21\right) \text{ m}^2 = 1386 \text{ m}^2$$

$$\therefore \text{Required area} = 1386 \text{ m}^2$$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q9

Answer :Let a be one side of the square.Area of the square = 121 cm^2 (given)

$$\Rightarrow a^2 = 121$$

$$\Rightarrow a = 11 \text{ cm (since } 11 \times 11 = 121)$$

Perimeter of the square = $4 \times \text{side} = 4a = (4 \times 11) \text{ cm} = 44 \text{ cm}$

Length of the wire = Perimeter of the square

$$= 44 \text{ cm}$$

The wire is bent in the form of a circle.

Circumference of a circle = Length of the wire

 \therefore Circumference of a circle = 44 cm

$$\Rightarrow 2\pi r = 44$$

$$\Rightarrow \left(2 \times \frac{22}{7} \times r\right) = 44$$

$$\Rightarrow r = \left(\frac{44 \times 7}{2 \times 22}\right) = 7 \text{ cm}$$

 \therefore Area of the circle = πr^2

$$= \left(\frac{22}{7} \times 7 \times 7\right) \text{ cm}^2$$

$$= 154 \text{ cm}^2$$

Q10

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

It is given that the radius of the circle is 28 cm.

Length of the wire = Circumference of the circle

$$\Rightarrow \text{Circumference of the circle} = 2\pi r = \left(2 \times \frac{22}{7} \times 28\right) \text{ cm} = 176 \text{ cm}$$

Let the wire be bent into the form of a square of side a cm.

Perimeter of the square = 176 cm

$$\Rightarrow 4a = 176$$

$$\Rightarrow a = \left(\frac{176}{4}\right) \text{ cm} = 44 \text{ cm}$$

Thus, each side of the square is 44 cm.

$$\begin{aligned} \text{Area of the square} &= (\text{Side})^2 = (a)^2 = (44 \text{ cm})^2 \\ &= 1936 \text{ cm}^2 \end{aligned}$$

$$\therefore \text{Required area of the square formed} = 1936 \text{ cm}^2$$

Q11

Answer :

$$\text{Area of the acrylic sheet} = 34 \text{ cm} \times 24 \text{ cm} = 816 \text{ cm}^2$$

Given that the diameter of a circular button is 3.5 cm.

$$\therefore \text{Radius of the circular button } (r) = \left(\frac{3.5}{2}\right) \text{ cm} = 1.75 \text{ cm}$$

$$\begin{aligned} \therefore \text{Area of 1 circular button} &= \pi r^2 \\ &= \left(\frac{22}{7} \times 1.75 \times 1.75\right) \text{ cm}^2 \\ &= 9.625 \text{ cm}^2 \end{aligned}$$

$$\therefore \text{Area of 64 such buttons} = (64 \times 9.625) \text{ cm}^2 = 616 \text{ cm}^2$$

$$\begin{aligned} \text{Area of the remaining acrylic sheet} &= (\text{Area of the acrylic sheet} - \text{Area of 64 circular buttons}) \\ &= (816 - 616) \text{ cm}^2 = 200 \text{ cm}^2 \end{aligned}$$

Q12

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Area of the rectangular ground = $90 \text{ m} \times 32 \text{ m} = (90 \times 32) \text{ m}^2 = 2880 \text{ m}^2$

Given:

Radius of the circular tank (r) = 14 m

$$\begin{aligned} \therefore \text{Area covered by the circular tank} &= \pi r^2 = \left(\frac{22}{7} \times 14 \times 14\right) \text{ m}^2 \\ &= 616 \text{ m}^2 \end{aligned}$$

\therefore Remaining portion of the rectangular ground for turfing = (Area of the rectangular ground - Area covered by the circular tank)

$$= (2880 - 616) \text{ m}^2 = 2264 \text{ m}^2$$

Rate of turfing = Rs 50 per sq. metre

\therefore Total cost of turfing the remaining ground = Rs (50×2264) = Rs 1,13,200

Q13

Answer :

Area of each of the four quadrants is equal to each other with radius 7 cm .

Area of the square ABCD = $(\text{Side})^2 = (14 \text{ cm})^2 = 196 \text{ cm}^2$

$$\begin{aligned} \text{Sum of the areas of the four quadrants} &= \left(4 \times \frac{1}{4} \times \frac{22}{7} \times 7 \times 7\right) \text{ cm}^2 \\ &= 154 \text{ cm}^2 \end{aligned}$$

\therefore Area of the shaded portion = Area of square ABCD - Areas of the four quadrants

$$\begin{aligned} &= (196 - 154) \text{ cm}^2 \\ &= 42 \text{ cm}^2 \end{aligned}$$

Q14

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let ABCD be the rectangular field.

Here, AB = 60 m

BC = 40 m

Let the horse be tethered to corner A by a 14 m long rope.

Then, it can graze through a quadrant of a circle of radius 14 m.

∴ Required area of the field = $\left(\frac{1}{4} \times \frac{22}{7} \times 14 \times 14\right) \text{ m}^2 = 154 \text{ m}^2$

Hence, horse can graze 154 m² area of the rectangular field.

<https://www.youtube.com/embed/m3dwUx5pXj8?feature=oembed>

Q15

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Diameter of the big circle = 21 cm

Radius = $\left(\frac{21}{2}\right)$ cm = 10.5 cm

$$\begin{aligned}\therefore \text{Area of the bigger circle} &= \pi r^2 = \left(\frac{22}{7} \times 10.5 \times 10.5\right) \text{ cm}^2 \\ &= 346.5 \text{ cm}^2\end{aligned}$$

$$\begin{aligned}\text{Diameter of circle I} &= \frac{2}{3} \text{ of the diameter of the bigger circle} \\ &= \frac{2}{3} \text{ of } 21 \text{ cm} = \left(\frac{2}{3} \times 21\right) \text{ cm} = 14 \text{ cm}\end{aligned}$$

Radius of circle I (r_1) = $\left(\frac{14}{2}\right)$ cm = 7 cm

$$\begin{aligned}\therefore \text{Area of circle I} &= \pi r_1^2 = \left(\frac{22}{7} \times 7 \times 7\right) \text{ cm}^2 \\ &= 154 \text{ cm}^2\end{aligned}$$

$$\begin{aligned}\text{Diameter of circle II} &= \frac{1}{3} \text{ of the diameter of the bigger circle} \\ &= \frac{1}{3} \text{ of } 21 \text{ cm} = \left(\frac{1}{3} \times 21\right) \text{ cm} = 7 \text{ cm}\end{aligned}$$

Radius of circle II (r_2) = $\left(\frac{7}{2}\right)$ cm = 3.5 cm

$$\begin{aligned}\therefore \text{Area of circle II} &= \pi r_2^2 = \left(\frac{22}{7} \times 3.5 \times 3.5\right) \text{ cm}^2 \\ &= 38.5 \text{ cm}^2\end{aligned}$$

$$\begin{aligned}\therefore \text{Area of the shaded portion} &= \{\text{Area of the bigger circle} - (\text{Sum of the areas of circle I and II})\} \\ &= \{346.5 - (154 + 38.5)\} \text{ cm}^2 \\ &= \{346.5 - 192.5\} \text{ cm}^2 \\ &= 154 \text{ cm}^2\end{aligned}$$

Hence, the area of the shaded portion is 154 cm²

Q16

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

Let ABCD be the rectangular plot of land that measures 8 m by 6 m.

$$\therefore \text{Area of the plot} = (8 \text{ m} \times 6 \text{ m}) = 48 \text{ m}^2$$

$$\text{Area of the four flower beds} = \left(4 \times \frac{1}{4} \times \frac{22}{7} \times 2 \times 2\right) \text{ m}^2 = \left(\frac{88}{7}\right) \text{ m}^2$$

$$\begin{aligned} \text{Area of the circular flower bed in the middle of the plot} &= \pi r^2 \\ &= \left(\frac{22}{7} \times 2 \times 2\right) \text{ m}^2 = \left(\frac{88}{7}\right) \text{ m}^2 \end{aligned}$$

$$\begin{aligned} \text{Area of the remaining part} &= \left\{48 - \left(\frac{88}{7} + \frac{88}{7}\right)\right\} \text{ m}^2 \\ &= \left\{48 - \frac{176}{7}\right\} \text{ m}^2 \\ &= \left\{\frac{336-176}{7}\right\} \text{ m}^2 = \left(\frac{160}{7}\right) \text{ m}^2 = 22.86 \text{ m}^2 \end{aligned}$$

$$\therefore \text{Required area of the remaining plot} = 22.86 \text{ m}^2$$

Exercise 20G

Q1

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

(c) 192 cm^2

Let ABCD be the rectangular plot.

Then, $AB = 16 \text{ cm}$

$AC = 20 \text{ cm}$

Let $BC = x \text{ cm}$

From right triangle ABC:

$$AC^2 = AB^2 + BC^2$$

$$\Rightarrow (20)^2 = (16)^2 + x^2$$

$$\Rightarrow x^2 = (20)^2 - (16)^2 \Rightarrow \{400 - 256\} = 144$$

$$\Rightarrow x = \sqrt{144} = 12$$

$\therefore BC = 12 \text{ cm}$

$\therefore \text{Area of the plot} = (16 \times 12) \text{ cm}^2 = 192 \text{ cm}^2$

Q30

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Answer :

(c) 17.60 m

Let the radius of the circle be r m.

$$\text{Area} = \pi r^2 \text{ m}^2$$

$$\therefore \pi r^2 = 24.64$$

$$\Rightarrow \left(\frac{22}{7} \times r \times r\right) = 24.64$$

$$\Rightarrow r^2 = \left(\frac{24.64 \times 7}{22}\right) = 7.84$$

$$\Rightarrow r = \sqrt{7.84} = 2.8 \text{ m}$$

$$\Rightarrow \text{Circumference of the circle} = (2\pi r) \text{ m}$$

$$= \left(2 \times \frac{22}{7} \times 2.8\right) \text{ m} = 17.60 \text{ m}$$

Q31

Answer :

(c) 3 cm

Suppose the radius of the original circle is r cm.

$$\text{Area of the original circle} = \pi r^2$$

$$\text{Radius of the circle} = (r + 1) \text{ cm}$$

According to the question:

$$\pi(r + 1)^2 = \pi r^2 + 22$$

$$\Rightarrow \pi(r^2 + 1 + 2r) = \pi r^2 + 22$$

$$\Rightarrow \pi r^2 + \pi + 2\pi r = \pi r^2 + 22$$

$$\Rightarrow \pi + 2\pi r = 22 \quad [\text{cancel } \pi r^2 \text{ from both the sides of the equation}]$$

$$\Rightarrow \pi(1 + 2r) = 22$$

$$\Rightarrow (1 + 2r) = \frac{22}{\pi} = \left(\frac{22 \times 7}{22}\right) = 7$$

$$\Rightarrow 2r = 7 - 1 = 6$$

$$\therefore r = \left(\frac{6}{2}\right) \text{ cm} = 3 \text{ cm}$$

\therefore Original radius of the circle = 3 cm

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-7-maths-chapter-20-mensuration/>

Q32

Answer :

(c) 1000

Radius of the wheel = 1.75 m

Circumference of the wheel = $2\pi r$

$$= \left(2 \times \frac{22}{7} \times 1.75\right) \text{cm} = (2 \times 22 \times 0.25) \text{m} = 11 \text{ m}$$

Distance covered by the wheel in 1 revolution is 11 m.

Now, 11 m is covered by the car in 1 revolution.

(11 × 1000) m will be covered by the car in $\left(1 \times \frac{1}{11} \times 11 \times 1000\right)$ revolutions, i.e. 1000 revolutions.

∴ Required number of revolutions = 1000

RS Aggarwal Class 7 Solutions

About RS Aggarwal Class 7 Book

Investing in an R.S. Aggarwal book will never be of waste since you can use the book to prepare for various competitive exams as well. RS Aggarwal is one of the most prominent books with an endless number of problems. R.S. Aggarwal's book very neatly explains every derivation, formula, and question in a very consolidated manner. It has tonnes of examples, practice questions, and solutions even for the NCERT questions.

He was born on January 2, 1946 in a village of Delhi. He graduated from Kirori Mal College, University of Delhi. After completing his M.Sc. in Mathematics in 1969, he joined N.A.S. College, Meerut, as a lecturer. In 1976, he was awarded a fellowship for 3 years and joined the University of Delhi for his Ph.D. Thereafter, he was promoted as a reader in N.A.S. College, Meerut. In 1999, he joined M.M.H. College, Ghaziabad, as a reader and took voluntary retirement in 2003. He has authored more than 75 titles ranging from Nursery to M. Sc. He has also written books for competitive examinations right from the clerical grade to the I.A.S. level.

Frequently Asked Questions (FAQs)

Why must I refer to the RS Aggarwal textbook?

RS Aggarwal is one of the most important reference books for high school grades and is recommended to every high school student. The book covers every single topic in detail. It goes in-depth and covers every single aspect of all the mathematics topics and covers both theory and problem-solving. The book is true of great help for every high school student. Solving a majority of the questions from the book can help a lot in understanding topics in detail and in a manner that is very simple to understand. Hence, as a high school student, you must definitely dwell your hands on RS Aggarwal!

Why should you refer to RS Aggarwal textbook solutions on Indcareer?

RS Aggarwal is a book that contains a few of the hardest questions of high school mathematics. Solving them and teaching students how to solve questions of such high difficulty is not the job of any neophyte. For solving such difficult questions and more importantly, teaching the problem-solving methodology to students, an expert teacher is mandatory!

Does IndCareer cover RS Aggarwal Textbook solutions for Class 6-12?

RS Aggarwal is available for grades 6 to 12 and hence our expert teachers have formulated detailed solutions for all the questions of each edition of the textbook. On our website, you'll be able to find solutions to the RS Aggarwal textbook right from Class 6 to Class 12. You can head to the website and download these solutions for free. All the solutions are available in PDF format and are free to download!
