RS Aggarwal Solutions for Class 8 Maths Chapter 24–Probability

Class 8: Maths Chapter 24 solutions. Complete Class 8 Maths Chapter 24 Notes.

RS Aggarwal Solutions for Class 8 Maths Chapter 24–Probability

RS Aggarwal 8th Maths Chapter 24, Class 8 Maths Chapter 24 solutions

Ex 24A

Question 1.

Solution:

- (i) When a coin is tossed, we get outcomes 2 as H or T (Head or Tail)
- (ii) When two coins are tossed together, we get possible four outcomes as HH, HT, TH, TT
- (iii) A die is thrown, we get possible outcomes as 1, 2, 3, 4, 5, 6
- (iv) From a well – shuffled deck of 52 cards, One card is at random drawn, we get the possible outcomes is 52

Question 2.

Solution:

Possible outcomes = 2

In a single throw of a coin, we get

probability of getting a tail = $\frac{1}{2}$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-8-maths-chapter-24-probability/>

Question 3.**Solution:**

In a single throw of two coins, possible outcomes = 4

- (i) Probability of getting both tails = $\frac{1}{4}$
- (ii) Probability of getting at least one tail = $\frac{3}{4}$
- (iii) Probability of getting at the most one tail = $\frac{2}{4} = \frac{1}{2}$

Question 4.**Solution:**

In a bag, there are 4 white and 5 blue balls ,

Possible outcomes = $4 + 5 = 9$

One ball is drawn at random, then

- (i) the probability of a white ball = $\frac{4}{9}$
- (ii) the probability of a blue ball = $\frac{5}{9}$

Question 5.**Solution:**

In a bag, there are 5 white, 6 red and 4 green balls

Possible outcome is $5 + 6 + 4 = 15$

One ball is drawn at random, then

- (i) Probability of a green ball = $\frac{4}{15}$
- (ii) Probability of a white ball = $\frac{5}{15} = \frac{1}{3}$
- (iii) Probability of a non-red ball = $\frac{5+4}{15}$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-8-maths-chapter-24-probability/>

$$= 915$$

$$= 35$$

(5 white and 4 green balls are non-red balls)

Question 6.

Solution:

In a lottery, there are 10 prizes and 20 blanks

$$\text{Possible outcomes} = 10 + 20 = 30$$

A ticket is chosen at random, then

$$\text{probability of getting a prize} = \frac{10}{30} = \frac{1}{3}$$

Question 7.

Solution:

In a box of 100 electric bulb, 8 are defective

$$\text{Then non-defective bulbs} = 100 - 8 = 92$$

$$\text{Now possible outcomes} = 100$$

$$(i) \text{ Probability of a drawn bulb, which is defective} = \frac{8}{100} = \frac{2}{25}$$

$$(ii) \text{ Probability of a drawn bulb which is non defective} = \frac{92}{100} = \frac{23}{25}$$

Question 8.

Solution:

A die is thrown, then

$$\text{Possible outcomes} = 6$$

$$(i) \text{ Now probability of getting 2} = \frac{1}{6}$$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-8-maths-chapter-24-probability/>

(ii) Probability of a number less than 3 (which are 1 and 2) = $\frac{2}{26} = \frac{1}{13}$

(iii) Probability of a composite number (a composite number is a number which is not a prime number which are 4, 6) = $\frac{2}{26} = \frac{1}{13}$

(iv) Probability of a number not less than 4 (which are 5, 6) = $\frac{2}{26} = \frac{1}{13}$

Question 9.

Solution:

Total number of ladies = 200

Those who like coffee = 82

Those who dislike coffee = 118

Possible number of outcomes = 200

One lady is chosen at random, then

(i) Probability of a lady who dislikes coffee = $\frac{118}{200}$

= $\frac{59}{100}$

Question 10.

Solution:

19 ball bearing numbers, 1, 2, 3, ..., 19

possible outcomes = 19

A ball is drawn at random from the box, then

(i) Probability of a ball which bears a prime numbers which are 2, 3, 5, 7, 11, 13, 17 and 19 = $\frac{8}{19}$

(ii) Probability of a ball which bears an even number which are 2, 4, 6, 8, 10, 12, 14, 16, 18 = $\frac{9}{19}$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-8-maths-chapter-24-probability/>

(iii) Probability of a number which bears a number divisible by 3 which are 3, 6, 9, 12, 15, 18 = $\frac{6}{619}$

Question 11.

Solution:

A card's drawn at random from a deck

of well-shuffled deck of 52 cards Probability = $\frac{1}{52}$

(i) Probability of a card being a king = $\frac{4}{52} = \frac{1}{13}$

(ii) Probability of a card being spade = $\frac{13}{52} = \frac{1}{4}$

(iii) Probability of a card being a red queen = $\frac{2}{52} = \frac{1}{26}$

(iv) Probability of a card being a black 8 = $\frac{2}{52} = \frac{1}{26}$

Question 12.

Solution:

One card is drawn at random from a deck of well shuffled deck of 52 cards

Possible outcomes = 52

(i) Probability of a card being a 4 = $\frac{4}{52} = \frac{1}{13}$

(ii) Probability of a card being a queen = $\frac{4}{52} = \frac{1}{13}$

(iii) Probability of a card being a black card = $\frac{26}{52} = \frac{1}{2}$

Ex 24B

Question 1.

Solution:

A spinning wheel has 3 white and 5 green sectors

Possible out come = $3 + 5 = 8$

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-8-maths-chapter-24-probability/>

It is spinners, then

Probability of getting a green sector = $\frac{58}{360}$ (b)

Question 2.

Solution:

8 cards are numbered 1, 2, 3, 4, 5, 6, 7, 8

They are mixed and kept in a box One card is chosen at random, then Probability of card having 9 number less than 4 = $\frac{3}{8}$ (c)

Question 3.

Solution:

Two coins are tossed simultaneously, then Possible outcomes = 4

Now probability of getting one head and one tail = $\frac{2}{4} = \frac{1}{2}$ (b)

Question 4.

Solution:

. In a bag, there are 3 white and 2 red balls

Possible outcomes = $3 + 2 = 5$

Now probability of a red ball drawn

= $\frac{2}{5}$ (d)

Question 5.

Solution:

A die is thrown then

Possible outcomes = 6

<https://www.indcareer.com/schools/rs-aggarwal-solutions-for-class-8-maths-chapter-24-probability/>

Now probability of getting 6 is $\frac{1}{6}$ (b)

Question 6.

Solution:

A die is thrown

Possible outcomes = 6

Now probability of getting an even number

which are 2, 4, 6 = $\frac{3}{6} = \frac{1}{2}$ (a)

Question 7.

Solution:

One card is drawn from a well shuffled deck of 52 cards, possible out comes = 52

The probability of card which is a queen = $\frac{4}{52}$

= $\frac{1}{13}$ (c)

Question 8.

Solution:

One card is drawn from a well-shuffled deck of 52 card, possible out comes = 52

Probability of a card being a black 6

(which are two) = $\frac{2}{52} = \frac{1}{26}$ (b)

RS Aggarwal Class 8 Solutions

- Chapter 1–Rational Numbers
- Chapter 2–Exponents
- Chapter 3–Squares and Square Roots
- Chapter 4–Cubes and Cube Roots
- Chapter 5–Playing with Numbers
- Chapter 6–Operations on Algebraic Expressions
- Chapter 7–Factorisation
- Chapter 8–Linear Equations
- Chapter 9–Percentage
- Chapter 10–Profit and Loss
- Chapter 11–Compound Interest
- Chapter 12–Direct and Inverse Proportion
- Chapter 13–Time and Work
- Chapter 14–Polygons
- Chapter 15–Quadrilaterals
- Chapter 16–Parallelograms
- Chapter 17–Construction of Quadrilaterals
- Chapter 18–Area of a Trapezium and a Polygon
- Chapter 19–Three-Dimensional Figures
- Chapter 20–Volume and Surface Area of Solids
- Chapter 21–Data Handling
- Chapter 22–Constructing and Interpreting Bar Graphs
- Chapter 23–Pie Charts
- Chapter 24–Probability
- Chapter 25–Graphs

About RS Aggarwal Class 8 Book

Investing in an R.S. Aggarwal book will never be of waste since you can use the book to prepare for various competitive exams as well. RS Aggarwal is one of the most prominent books with an endless number of problems. R.S. Aggarwal's book very neatly explains every derivation, formula, and question in a very consolidated manner. It has tonnes of examples, practice questions, and solutions even for the NCERT questions.

He was born on January 2, 1946 in a village of Delhi. He graduated from Kirori Mal College, University of Delhi. After completing his M.Sc. in Mathematics in 1969, he joined N.A.S. College, Meerut, as a lecturer. In 1976, he was awarded a fellowship for 3 years and joined the University of Delhi for his Ph.D. Thereafter, he was promoted as a reader in N.A.S. College, Meerut. In 1999, he joined M.M.H. College, Ghaziabad, as a reader and took voluntary retirement in 2003. He has authored more than 75 titles ranging from Nursery to M. Sc. He has also written books for competitive examinations right from the clerical grade to the I.A.S. level.

Frequently Asked Questions (FAQs)

Why must I refer to the RS Aggarwal textbook?

RS Aggarwal is one of the most important reference books for high school grades and is recommended to every high school student. The book covers every single topic in detail. It goes in-depth and covers every single aspect of all the mathematics topics and covers both theory and problem-solving. The book is true of great help for every high school student. Solving a majority of the questions from the book can help a lot in understanding topics in detail and in a manner that is very simple to understand. Hence, as a high school student, you must definitely dwell your hands on RS Aggarwal!

Why should you refer to RS Aggarwal textbook solutions on Indcareer?

RS Aggarwal is a book that contains a few of the hardest questions of high school mathematics. Solving them and teaching students how to solve questions of such high difficulty is not the job of any neophyte. For solving such difficult questions and more importantly, teaching the problem-solving methodology to students, an expert teacher is mandatory!

Does IndCareer cover RS Aggarwal Textbook solutions for Class 6-12?

RS Aggarwal is available for grades 6 to 12 and hence our expert teachers have formulated detailed solutions for all the questions of each edition of the textbook. On our website, you'll be able to find solutions to the RS Aggarwal textbook right from Class 6 to Class 12. You can head to the website and download these solutions for free. All the solutions are available in PDF format and are free to download!
